Date: 10/31/2016 3:30 pm

Returned Michael Taffet's call. The following items were discussed:

- He represents the Oak Center Neighborhood Association.
- His contact info is mjt@gmail.com
- He wanted to know what was going on with respect to the environmental conditions at the Saberi site.
- I gave him an update on what was discussed during the latest meeting between Saberi's consultant Pangea (Bob Clark-Riddell) and Alameda County Department of Environmental Health (ACDEH):
 - Pangea will notify the neighborhood via Michael Taffet every time they plan to perform groundwater sampling or any form of investigation at the site
 - Pangea is in the process of preparing a focused site conceptual model which will include the following:
 - Perform an additional groundwater sampling event to assess for rebound conditions from the shutdown of the former remediation system in February 2013, as well as determine whether there are any data gaps based on the existing groundwater monitoring network.
 - Determine whether additional characterization will be required with respect to the waste oil tank associated with the building
 - Assess whether there are any potential for vapor intrusion to neighbors adjacent to the site
- He wanted to be included in any form of correspondence with respect to the site and that way he can inform the neighbors. Will send him website to geotracker.
