**Subject:** Second Quarter 2013 Status Report  
1619 1st Street, Livermore, California  
Tesoro No. 67076 (Former Beacon 3604); ACEH Case No. RO0434

Dear Mr. Wickham:

Enclosed please find a copy of the *Second Quarter 2013 Status Report* for the subject site, dated 15 October 2013. This report is submitted by Arctos Environmental on behalf of Tesoro Environmental Resources Company.

Based on my inquiry of the person or persons directly responsible for gathering the information contained in this report, I believe the information was prepared by qualified personnel who properly gathered and evaluated the information, and that the information submitted is, to the best of my knowledge and belief, true, correct, and complete. Please feel free to call me at 253/896-8700 or Scott Stromberg of Arctos Environmental at 510/525-2180 with questions.

Sincerely,

A handwritten signature in black ink, appearing to read "Jeffrey M. Baker".

Jeffrey M. Baker, P.E.  
Supervisor, Environmental  
Compliance & Remediation  
Tesoro Companies Inc.

Alameda, California 94502-6577

**Subject:      Second Quarter 2013 Status Report  
1619 1st Street, Livermore, California  
Tesoro No. 67076 (Former Beacon 3604); ACEH Case No. RO0434**

Dear Mr. Wickham:

Arctos Environmental (Arctos), on behalf of Tesoro Environmental Resources Company (Tesoro), has prepared this letter report summarizing project tasks completed during the second quarter 2013 at the subject site (Figure 1).

### **Executive Summary**

A quarterly groundwater monitoring event was conducted from 22 to 24 April 2013. There was an average 2-foot decrease in water levels since the first quarter 2013. The highest onsite petroleum hydrocarbon concentrations were along the western side of the property at wells DW-8, MW-11, and TP-1. The highest offsite petroleum hydrocarbon concentrations were at well MW-6 located northwest of the site. The soil vapor extraction (SVE) system and oxygen injection system remained shut off during the second quarter 2013.

Arctos installed seven deep offsite injection wells in April 2013 in preparation for the expanded in-situ chemical oxidation (ISCO) pilot test. The injection wells were installed in accordance with a work plan dated 28 February 2013 and approved in a letter from Alameda County Environmental Health (ACEH) dated 25 March 2013. The expanded onsite and offsite ISCO pilot test was conducted during the second quarter 2013. A description of the expanded ISCO pilot test including the results of the pilot test will be submitted in a separate report.

During the third quarter 2013, Tesoro will continue to monitor groundwater wells in the vicinity of the ISCO pilot test to evaluate the effectiveness of the ISCO pilot test on and off site.

## **Site Background**

The site description and background are included in Arctos's "In Situ Chemical Oxidation (ISCO) Pilot Test Report" dated 16 March 2012 (Arctos, 2012).

## **Groundwater Monitoring**

Arctos's subcontractor, Environmental Field Services, LLC (EFS), of Patterson, California, performed a quarterly groundwater monitoring event from 22 to 24 April 2013. Samples were collected from wells MW-1 through MW-12, DW-1 through DW-9, IP-1 through IP-10, TP-1, TP-2, VW-2, and VW-3 (Figure 2) in accordance with the site monitoring plan (Attachment A) and the ISCO pilot test work plan. Groundwater monitoring was performed in accordance with the guidelines of the California Underground Storage Tank Regulations, Title 23, Division 3, Chapter 16, California Code of Regulations. Groundwater sampling quality assurance/quality control (QA/QC) procedures are in Attachment A. Field data sheets are in Attachment B.

## **Analytical Program**

Groundwater samples were analyzed in accordance with the analytical plan in Attachment A. Groundwater samples collected from wells MW-2, MW-6 through MW-12, DW-1 through DW-3, DW-5 through DW-9, IP-1, IP-5, and IP-10 were tested for additional analytes in accordance with the ISCO pilot test work plan (Arctos, 2011).

## **Groundwater Results**

Groundwater elevations were approximately 433 to 441 feet above mean sea level (MSL; 33 to 37 feet below ground surface [bgs]). Water levels decreased an average of 2 feet compared to the first quarter 2013 and were an average of 2 feet higher than water levels in the second quarter 2012 (Table 1). The water level data indicate that the general direction of water flow is toward the northwest with an estimated gradient of 0.016 (1 foot/62 feet; Figure 2). The gradient is consistent with historical data collected since 1993 (Attachment C).

During the second quarter 2013, the highest onsite concentration of total petroleum hydrocarbons as gasoline (TPHg) of 5,800 micrograms per liter ( $\mu\text{g/l}$ ) was detected at MW-11. Benzene was detected onsite at a maximum concentration of 350 mg/l at DW-8. Methyl tert-butyl ether (MTBE) and tert-butyl alcohol (TBA) were detected onsite at maximum concentrations of 76 and 33  $\mu\text{g/l}$ , respectively, at TP-1.

Historically, a direct relationship between dissolved-phase hydrocarbons and water levels has been observed at shallow source area wells and an indirect relationship has

historically been observed at deep source area wells. Compared to when water levels were at the same elevation, dissolved-phase hydrocarbon concentrations in both shallow and deep source area wells have decreased by 71 to 94 percent, with the exception of shallow source area wells TP-1, TP-2, and VW-2. Concentrations at shallow source area well VW-2 have not changed compared to concentrations when the water levels were at the same elevation in October 2011. Concentrations at shallow source area wells TP-1 and TP-2 have increased compared to when water levels were at the same elevation in May 2012. However, concentrations at TP-1, TP-2, and VW-2 have decreased by over 90 percent compared to concentrations before the SVE and oxygen injection systems were started in June and October 2010, respectively. The reductions in hydrocarbon concentrations for shallow and deep source area wells are summarized in the following table:

Well ID	Date	Groundwater Elevation (ft. MSL)	Petroleum Hydrocarbon Concentration <sup>(a)</sup> ( $\mu\text{g/l}$ )			Percent Reduction
			TPHg	Benzene	MTBE	
MW-2	10/11/11	439.47	7,000	810	370	94
	4/23/13	438.83	430	10	13	
MW-11	2/2/11	440.66	20,000	210	ND<5	71
	4/24/13	440.22	5,800	16	ND<0.9	
TP-1	5/5/10	440.50	15,000	2,100	3,400	90
	5/8/12	437.94	590	1.6	28	
	4/24/13	438.93	2,000	35	76	
TP-2	5/6/10	441.08	6,400	740	14,000	99
	5/7/12	438.37	ND<50	ND<0.5	ND<0.5	
	4/24/13	439.08	100	1.2	0.54	
VW-2	5/5/10	441.44	2,800	130	1,300	99
	10/10/11	439.28	ND<50	ND<0.5	0.79	
	4/24/13	439.06	ND<50	ND<0.5	ND<0.5	
DW-1	10/11/11	438.45	180	3	0.77	72
	4/22/13	439.13	ND<50	ND<0.5	ND<0.5	

(a) Dissolved-phase petroleum hydrocarbons as analyzed by EPA Method 8260B and reported in micrograms per liter ( $\mu\text{g/l}$ ).

(b) ND – Not detected at the reporting limit listed.

The highest offsite TPHg, benzene, MTBE, and TBA concentrations of 8,600, 880, 190, and 700  $\mu\text{g/l}$ , respectively, were at well MW-6, located northwest of the intersection of 1st Street and P Street.

Wells MW-12 and DW-9 are the farthest downgradient shallow and deep well cluster. TPHg, benzene, MTBE, and TBA were detected in deep well DW-9 at concentrations of

3,200, 18, 21, and 67 µg/l, respectively. TPHg and benzene were detected in shallow well MW-12 at concentrations of 1,400 and 2.2 µg/l, respectively. MTBE and TBA were not detected in well MW-12. All offsite benzene concentrations were below the environmental screening level (ESL) of 1,800 µg/l established by the San Francisco Regional Water Quality Control Board for evaluation of potential vapor intrusion concerns.

Groundwater analytical results are summarized in Tables 2 and 3. Figures 3, 4, and 5 show isoconcentration contours for TPHg, benzene, and MTBE, respectively. Historical analytical results are in Attachment D, and the laboratory reports and the chain-of-custody forms are in Attachment E.

### **Expanded ISCO Pilot Test**

Arctos conducted an ISCO pilot test at well IP-9 in the fourth quarter 2011. Monitoring results for the first quarter 2013 showed that TPHg and benzene concentrations decreased by over 68 percent at injection well IP-9. ISCO pilot test groundwater monitoring results are summarized in Table 4.

The oxidation process caused an increase in hexavalent chromium concentrations at injection well IP-9. The hexavalent chromium concentration in well IP-9 has decreased from 90 to 30 µg/l since the pilot test. Hexavalent chromium was not detected in any other monitoring wells within the ISCO pilot test area.

As described in the 16 March 2012 pilot test report, changes in groundwater chemistry and hydrocarbon concentrations indicated that the RegenOx™ chemical oxidant was effective at desorbing petroleum hydrocarbons from soil and destroying hydrocarbons in groundwater. On 25 March 2013, Arctos obtained approval from ACEH for an expanded ISCO pilot test to occur on and off site. The objective of the expanded pilot test was to further assess the effectiveness of the RegenOx™ chemical oxidant at remediating hydrocarbons in soil and groundwater.

Arctos installed seven offsite injection wells in April 2013. Well installation activities are discussed further in this report. Arctos's subcontractor, Confluence Environmental of Sacramento, California, conducted the expanded ISCO pilot test from May to August 2013. Results of the expanded ISCO pilot test will be included in a separate report.

## Source Area Remediation

### SVE System

On 17 November 2012, the SVE system shut down because of a system alarm. Water levels on site had increased and insufficient screen was exposed for the SVE wells to operate. The system remained shut down during second quarter 2013.

A soil gas survey was conducted in June 2010 to establish baseline soil vapor conditions before starting the SVE system. On 28 February 2013, water levels decreased to elevations similar to June 2010 and Arctos conducted a soil gas survey to evaluate the effectiveness of the SVE system after approximately 2.5 years of operation. Concentrations of petroleum hydrocarbons in soil vapor decreased by over 90 percent at all SVE and soil vapor monitoring wells between June 2010 and February 2013. The results of the soil gas survey are summarized below and in Table 5. Soil vapor sampling procedures are in Attachment F and laboratory reports and the chain-of-custody forms are in Attachment E.

Well ID	Screen Interval (feet bgs)	Date	Petroleum Hydrocarbon Concentration <sup>(a)</sup> (mg/m <sup>3</sup> )			Percent Reduction
			TPHg	Benzene	MTBE	
MW-1	34 - 54	6/24/10	NS <sup>(b)</sup>	NS	NS	NA <sup>(c)</sup>
		2/28/13	NS	NS	NS	
MW-11	28 - 43	6/24/10	2,300	13	ND<0.10 <sup>(d)</sup>	99
		2/28/13	26	ND<0.20	ND<0.20	
TP-1	28 - 43	6/24/10	350	0.15	ND<0.10	91 <sup>(e)</sup>
		2/28/13	32	ND<0.20	ND<0.20	
TP-2	28 - 43	6/24/10	3,600	24	18	99
		2/28/13	26	ND<0.20	ND<0.20	
VW-2	22 - 37	6/24/10	3,100	0.91	ND<0.10	99 <sup>(e)</sup>
		2/28/13	ND<20	ND<0.20	ND<0.20	
VW-3	21 - 36	6/24/10	120	0.33	ND<0.10	92 <sup>(e)</sup>
		2/28/13	ND<20	ND<0.20	ND<0.20	

(a) Vapor-phase petroleum hydrocarbons as analyzed by EPA Method 8260B and reported in milligrams per cubic meter (mg/m<sup>3</sup>).

(b) NS – Not sampled. A sample was not collected because of submerged screen.

(c) NA – Not applicable.

(d) ND – Not detected at the reporting limit listed.

(e) Percent reduction calculated using TPHg concentrations.

During SVE operation from June 2010 through November 2012, hydrocarbon mass was removed from the subsurface through (1) volatilization caused by the SVE system and (2) in situ bioremediation from increased oxygen levels. The daily rate of hydrocarbon mass removal by volatilization was calculated from influent soil gas sample results and

field flow measurements. Mass removal by biodegradation was calculated using equations adapted from a U.S. Environmental Protection Agency guidance document (EPA, 1995). SVE influent soil gas analytical results and SVE system parameters used for these calculations are summarized in Tables 6 and 7, respectively. The total hydrocarbon mass removed by the SVE system to date is estimated to be 38,250 pounds or approximately 5,890 gallons (at a density of 6.5 pounds per gallon).

Figures 6, 7, and 8 show soil vapor influent concentrations, mass removal by volatilization, and mass removal by biodegradation, respectively, during SVE operation.

#### Oxygen Injection System

The oxygen injection system was shut down on 28 March in preparation for the expanded ISCO pilot test and remained shut off during the second quarter 2013. The system delivered oxygen to the subsurface in pulsed intervals to increase oxygen levels while decreasing the potential for “pushing” dissolved hydrocarbons away from injection wells. The oxygen purity was approximately 88 percent and the average flow rate was 35 standard cubic feet per hour. DO readings are summarized in Attachment G.

#### Source Area Reduction

Concentrations in groundwater have decreased by up to 94 percent in source area wells and the plume has decreased in area. Figures 9A through 9C show onsite concentration contour maps for TPHg, benzene, and MTBE in May 2010, prior to startup of the SVE and oxygen injection systems, and in the second quarter 2013. Onsite remediation has effectively reduced the lateral extent of source area petroleum hydrocarbons by over 60 percent. As of 28 March, both the SVE and oxygen injection systems are shut down. Based on the expanded treatment area of the ISCO pilot test and the reduced concentrations in the source area, the source area treatment systems are no longer required for soil and groundwater remediation.

#### **Well Installation**

Arctos installed seven deep offsite injection wells during the second quarter 2013 as described in the work plan dated 28 February 2013 and approved in a letter from ACEH dated 25 March 2013. The purpose of the offsite injection wells was to perform the offsite expanded ISCO pilot test. The completed scope of work included the following tasks:

- Obtained permits from Zone 7 Water Agency for well installation
- Installed seven deep offsite injection wells, designated as IP-11 through IP-17 (Figure 10)
- Developed seven deep offsite injection wells.

Well Installation

Gregg Drilling & Testing, Inc. (Gregg Drilling), of Martinez, California, drilled the soil borings for the deep injection wells in April 2013 using a hollow-stem auger rig. Borings IP-12, IP-13, IP-14, and IP-17 were blind drilled and soil was not logged or sampled; however vapor screening was conducted using the soil cuttings. Borings IP-11, IP-15, and IP-16 were blind drilled to 45 feet bgs and then sampled using core barrel from 45 to 65 feet bgs. Soil samples were collected for visual logging and vapor screening.

The deep injection wells were designed for the offsite expanded ISCO pilot test injections. The wells were constructed using 4-inch-diameter, flush-threaded Schedule 40 polyvinyl chloride (PVC) casing. The wells were screened using 0.010-inch slotted screen from 50 to 60 feet below grade at the depth of the highest vapor readings. The boring and well construction logs are in Attachment H.

Well Development

Gregg Drilling developed wells IP-11 through IP-17 on 18 April 2013 and 19 April 2013 by surging, bailing, and pumping to (1) remove fines from the filter pack and well screen, and (2) reduce sediment in the water. A minimum of 10 casing volumes of water was removed from each well. The well development logs are in Attachment H.

**Conclusions**

The SVE and oxygen injection systems remained off during the second quarter 2013. Results of groundwater sampling indicate the following conclusions:

1. Onsite hydrocarbon concentrations in groundwater have decreased following SVE and oxygen injection.
2. Based on the expanded treatment area of the ISCO pilot test and the reduced concentrations in the source area, the source area treatment systems are no longer required for soil and groundwater remediation.
3. Downgradient groundwater concentrations are consistent with the previous results and all offsite benzene concentrations are below the ESL for potential vapor intrusion concerns.

**Recommendations**

Based on the activities completed during this quarter, Arctos recommends the following tasks during the third quarter 2013 and beyond:

- Submit a report documenting the results and evaluating the effectiveness of the expanded ISCO pilot test.
- Continue groundwater monitoring activities.

If you have questions or comments, please call Emily Chow or Mike Purchase at 510/525-2180.

Very truly yours,

**ARCTOS ENVIRONMENTAL**

- (a) Elevation of PVC well casing (north edge) surveyed relative to mean sea level (MSL).  
 Wells were surveyed by Cross Land Surveying, Inc., per AB 2886 requirements.  
 Benchmark K2-741, elevation is 467.835 feet above MSL.
- (b) Water Table Elevation = (Casing Elevation - Depth to Water)
- (c) Wells were resurveyed by Cross Land Surveying, Inc., per AB 2886 requirements, on 19 October 2010 after remediation system construction.  
 Benchmark K2-741, elevation is 467.835 feet above MSL.
- (d) NM - Not Measured
- (e) Depth of groundwater assumed to be below screened interval; well had 6 inches or less of water.

8,600

700.0

(a) Total petroleum hydrocarbons as gasoline (TPHg), benzene, toluene, ethylbenzene, xylenes, methyl tert-butyl ether (MTBE), di-isopropyl ether (DIPE), ethyl tert-butyl ether (ETBE), tert-amyl methyl ether (TAME), tert-butyl alcohol (TBA), methanol, ethanol, 1,2-dichloroethane (1,2-DCA), and 1,2-dibromoethane (EDB) analyzed by EPA Method 8260; reported in micrograms per liter ( $\mu\text{g/l}$ ).

(b) ND - Not detected at the reporting limit listed.

(c) NS - Not sampled.

(a) Total petroleum hydrocarbons as gasoline (TPHg), benzene, toluene, ethylbenzene, xylenes, methyl tert-butyl ether (MTBE), di-isopropyl ether (DIPE), ethyl tert-butyl ether (ETBE), tert-amyl methyl ether (TAME), tert-butyl alcohol (TBA), 1,2-dichloroethane (1,2-DCA), and 1,2-dibromoethane (EDB) analyzed by EPA Method 8260; reported in micrograms per liter ( $\mu\text{g/l}$ ).

(b) ND - Not detected at the reporting limit listed.

(c) Baseline remediation system values.

(d) NS - Not sampled.

(e) Primarily compounds not found in typical Gasoline.

- (a) Nitrate and sulfate analyzed by EPA Method 300.0; reported in milligrams per liter (mg/l).
- (b) Arsenic, chromium, iron, manganese, and sodium analyzed by EPA Method 6010B; reported in milligrams per liter (mg/l).
- (c) Hexavalent chromium (Hex Chrome) analyzed by EPA Method 7199; reported in micrograms per liter (µg/l).
- (d) Ferrous Iron (Fe (2+)) analyzed by Standard Method 3500-Fe D; reported in milligrams per liter (mg/l).
- (e) Carbon dioxide (CO<sub>2</sub>) and methane (CH<sub>4</sub>) analyzed by EPA Method RSK-175M; reported in micrograms per liter (µg/l).
- (f) Total alkalinity as CaCO<sub>3</sub> analyzed by Standard Method 2320B; reported in milligrams per liter (mg/l).
- (g) Total dissolved solids (TDS) analyzed by Standard Method 2540 C; reported in milligrams per liter (mg/l).
- (h) ND - Not detected at the reporting limit listed.
- (i) CO<sub>2</sub> analyzed by Standard Method 4500 C; reported in milligrams per liter (mg/l).

(a) Total petroleum hydrocarbons as gasoline (TPHg), benzene, toluene, ethylbenzene, total xylenes, methyl tert-butyl ether (MTBE), and tert-butyl alcohol (TBA) analyzed using EPA Method 8260B.

(b) Results are in percent by volume.

(c) NS - Not sampled. A sample was not collected due to a submerged screen.

(d) NA - Not analyzed.

(e) ND - Not detected at the reporting limit listed.

(f) Duplicate sample also collected; highest value presented in table (see laboratory report for results).

(a) Total petroleum hydrocarbons as gasoline (TPHg), benzene, toluene, ethylbenzene, xylenes, and methyl tert-butyl ether (MTBE), analyzed by EPA Method 8260; reported in parts per million by volume (ppmv).

(b) Fixed gases analyzed by Method ASTM D-1946; reported in percent (%).

(c) --- - Not analyzed.

(d) ND - Not detected at the reporting limit listed.

(e) SVE manifold influent vapor sample damaged during shipping to lab. Results of total well inlet and recirculation air used for data analysis.

- (a) "--" - Not sampled, analyzed, or collected.
- (b) An average flow rate was used due to inaccurate system parameter readings.
- (c) NA - Not applicable.
- (d) Only operating on well VW-2 due to high water levels.
- (e) Flow measurements taken with a TSI anemometer for better accuracy at low flow rates.

---

**Monitoring Plan**

In accordance with the California State Water Resources Control Board's (SWRCB) Resolution No. 2009-0042, referenced in Alameda County Environmental Health's 23 July 2009 letter to Tesoro Environmental Resources Company (Tesoro), Arctos Environmental (Arctos) proposed to reduce the monitoring and sampling frequency to semiannually in the second quarter 2009 status report. Select wells will continue to be monitored quarterly to assess the effectiveness of the groundwater remediation system according to the following groundwater monitoring plan:

Well Designation	Location	Sampling Frequency
MW-1 and MW-3	Upgradient	
MW-2, MW-11, and DW-1	Source area	Quarterly
MW-6, MW-12, DW-2, DW-3, DW-5, DW-6, DW-7, DW-8, and DW-9	Downgradient	
MW-4 and VW-3	Upgradient	
TP-1, TP-2, and VW-2	Source area	Semiannually (2nd and 4th quarters)
MW-5 and MW-7	Cross gradient	
MW-8, MW-9, MW-10, and DW-4	Downgradient	

**Analytical Plan**

The groundwater samples were analyzed by Kiff Analytical LLC, a State-certified laboratory in Davis, California, for total petroleum hydrocarbons as gasoline; benzene, toluene, ethylbenzene, and total xylenes; methyl tert-butyl ether; and other oxygenates using Environmental Protection Agency (EPA) Method 8260B.

Arctos, as Tesoro's Authorized Responsible Party for the site, also electronically submitted the groundwater monitoring results to the SWRCB. The data were submitted in the State-mandated Electronic Data Format, in accordance with Assembly Bill 2886 requirements for underground storage tank sites in California.

**Purge-and-Bail Sampling Procedures**

The depth to groundwater and total well depth were measured before sampling using an electronic water well sounder. The sequence of well sampling depended on the level of contamination in each well, if known, and was determined before sampling. Sampling occurred beginning at the well with the lowest contaminant concentration and ending at the well with the highest contaminant concentration. Before sampling, at least 3 casing volumes were purged from each monitoring well using a submersible pump. Throughout

purging, pH, conductivity, turbidity, and temperature were measured and recorded for the evacuated groundwater. These measurements were used to confirm that the well was purged sufficiently. Water samples were generally collected after the measurements of pH, conductivity, and temperature had stabilized to within 10 percent of the previous readings. Copies of the well purging and sampling logs are in Attachment B.

Sampling was performed with a new 1-1/2-inch-diameter disposable polyethylene bailer suspended from new nylon line. The bailer was equipped with a bottom-release device. Groundwater was collected with the bailer from just below the water surface in each monitoring well. Water samples were collected from the bailers in new 40-milliliter glass bottles provided by the analytical laboratory. The samples were collected so that no headspace was present in each bottle. The preservatives necessary for the analyses performed were provided in the glass bottles by the analytical laboratory.

The collected water samples were placed in sealable plastic bags and packed on ice in a portable ice chest immediately after collection. Samples were delivered within 24 to 48 hours to the analytical laboratory. Additional quality assurance/quality control (QA/QC) procedures, including the use of sample identification labels and chain-of-custody forms, were followed to track sample collection and delivery.

### **General Field QA/QC Procedures**

#### Chain-of-Custody Records

Chain-of-custody records were completed before samples were packaged for shipment. One copy of these records was placed in the project file. A second copy accompanied samples during transportation to the laboratory. The individual in the analytical laboratory who accepted responsibility for samples signed and dated the chain-of-custody record.

#### Equipment Decontamination Procedures

Field equipment was decontaminated between sampling events using the following procedures:

1. Rinsed with water using a brush to remove soil and mud.
2. Washed with non-phosphate detergent and water using a brush.
3. Rinsed with deionized or distilled water.
4. Rinsed again with deionized or distilled water.
5. Air dried.

*Personal Decontamination Procedures*

At a minimum, field personnel followed the following decontamination procedures:

1. Wore appropriate gloves.
2. Washed hands thoroughly with soap and water.
3. Avoided unnecessary contact with groundwater.

The site health and safety plan (HSP) was reviewed for site-specific personal decontamination procedures.

*Wastewater and Solid Waste Storage and Disposal*

Small volumes of used wash and rinse solutions were collected during field work and transported to a central decontamination area. This wastewater was stored in a holding tank. The Project Manager determined the appropriate disposal method for this wastewater. Waste manifests this quarter are in Attachment I.

Solid wastes such as used personal protective equipment, paper towels, trash bags, and any other solid debris were collected for disposal. Because the sampled groundwater was not a hazardous waste, the solid wastes were disposed with the onsite trash.

*Field Investigation Documentation Procedures*

Field personnel followed documentation procedures developed for site investigation work. The procedures served to (1) provide a record of the activities performed in the field and (2) permit identification of samples and tracking of their status in the field, during shipment, and at the laboratory. All documentation was recorded with waterproof ink. Groundwater sampling activities were documented on daily field reports and on well purge and sample logs.

*Health and Safety*

Arctos used a site-specific HSP with procedures that were followed by field personnel for equipment safety, medical surveillance, personal protection, air quality monitoring, exposure control, emergency response, and general work practices during field activities. Before beginning work at the site, a site safety meeting was conducted. Field personnel reviewed the HSP and signed the accompanying acknowledgment form before initiating field activities. Field personnel were required to comply with the HSP throughout performance of site assessment activities.

*Analytical QA/QC Procedures*

Laboratory analytical QA/QC procedures included (1) preparing and analyzing laboratory samples to assess the performance of the analytical laboratory and (2) conducting data validation in accordance with the protocols described below. QC samples prepared by the laboratory included method blanks, matrix spike and matrix spike duplicates, and laboratory control samples.

The laboratory results were reviewed in general accordance with EPA guidelines for data validation. The data validation process included reviewing laboratory results for the following parameters:

- Completeness of the data package
- Compliance with EPA-required holding times
- Agreement of dilution factors with reported detection limits
- Presence or absence of analytes in the method blanks
- Agreement of duplicate samples
- Percent recovery and relative percent difference results for matrix spike and matrix spike duplicate analyses
- Percent recovery results for laboratory control samples.

## Groundwater Sampling

### Water Level Recovery:

Depth to GW (ft.)

(I) Initially 34.12

(P) After Purging 39.20

P- 0.8(P-I) = 35.13

80% Recovery

(S) Before Sampling 34.79

Sampled 80% - 100% Yes

### Sample Containers:

No. Preservation

1 Liter Amber Glass

\_\_\_\_\_

8 oz. Glass amber

\_\_\_\_\_

40ml VOA

\_\_\_\_\_

250 polypropylene

\_\_\_\_\_

500 ml polypropylene

\_\_\_\_\_

Sample Date : 4-22-13

Time: 1325

Turbidity 116

Sampling Equipment : Disposable Bailer

Calibrate Date: 4/22/13

Comments: \_\_\_\_\_

- (a) Elevation of PVC well casing (north edge) surveyed relative to mean sea level (MSL).  
Wells were surveyed by Cross Land Surveying, Inc., per AB 2886 requirements.  
Benchmark K2-741, elevation is 467.835 feet above MSL.
- (b) Water Table Elevation = (Casing Elevation - Depth to Water)
- (c) Wells were resurveyed by Cross Land Surveying, Inc., per AB 2886 requirements, on 19 October 2010 after remediation system construction.  
Benchmark K2-741, elevation is 467.835 feet above MSL.
- (d) Depth of groundwater assumed to be below screened interval; well had 6 inches or less of water.
- (e) NM - Not measured.
- (f) Baseline remediation system values.

(a) Samples collected before July 2005 collected by others; data provided by Delta Environmental Consultants, Inc., Second Quarter 2005 Groundwater Monitoring Report dated 31 July 2005.

(b) Total petroleum hydrocarbons as gasoline (TPHg), benzene, toluene, ethylbenzene, xylenes, methyl tert-butyl ether (MTBE), di-isopropyl ether (DIPE), ethyl tert-butyl ether (ETBE), tert-amyl methyl ether (TAME), tert-butyl alcohol (TBA), 1,2-dichloroethane (1,2-DCA), and 1,2-dibromoethane (EDB) analyzed by EPA Method 8260; reported in micrograms per liter ( $\mu\text{g/l}$ ).

(c) ND - Not detected at the reporting limit listed.

(d) "--" - Not analyzed.

(e) NS - Not sampled.

(f) TBA results may be biased slightly high. A fraction of MTBE (typically less than 10 percent) converts to TBA during the analysis of water samples. This conversion effect is considered to be mathematically significant in samples that contain MTBE/TBA ratios of over 20:1.

(g) Baseline remediation system values.

(h) Primarily compounds not found in typical Gasoline.

## Laboratory Results

Scott Stromberg  
Arctos Environmental  
2332 5th St., Suite A  
Berkeley, CA 94610

Subject : 10 Water Samples  
Project Name : Tesoro - Livermore  
Project Number : 01LV

Dear Mr. Stromberg,

Chemical analysis of the samples referenced above has been completed. Summaries of the data are contained on the following pages. Sample(s) were received under documented chain-of-custody. US EPA protocols for sample storage and preservation were followed. Testing procedures comply with the 2003 NELAC and TNI 2009 standards. Laboratory results relate only to the samples tested. This report may be freely reproduced in full, but may only be reproduced in part with the express permission of Kiff Analytical, LLC. Kiff Analytical, LLC is certified by the State of California under the National Environmental Laboratory Accreditation Program (NELAP), lab # 08263CA. If you have any questions regarding procedures or results, please call me at 530-297-4800.

Sincerely,

A handwritten signature in black ink that reads "Troy G. Turpen".

Troy Turpen

## Case Narrative

Matrix Spike/Matrix Spike Duplicate results associated with samples DW-1 and MW-10 for the analyte Ferrous Iron were outside of control limits. This may indicate a bias for the sample that was spiked. Since the LCS recoveries were within control limits, no data are flagged.

Samples DW-1 and MW-10 were filtered in the laboratory for metals analysis.

Matrix Spike/Matrix Spike Duplicate results associated with samples DW-1 and MW-10 for the analyte Nitrate as N were outside of control limits. This may indicate a bias for the sample that was spiked. Since the LCS recoveries were within control limits, no data are flagged.

Matrix Spike/Matrix Spike Duplicate results associated with samples DW-1 and MW-10 for the analyte Sulfate were affected by the analyte concentration present in the un-spiked sample.

Matrix Spike/Matrix Spike Duplicate results associated with samples DW-1 and MW-10 for the analyte Dissolved Sodium were affected by the analyte concentrations already present in the un-spiked sample.

# SAMPLE RECEIPT CHECKLIST

RECEIVER  
TJB  
Initials

SRG#:

84667

Date: 042213

Project ID:

Tesoro - Livermore

Method of Receipt:  Courier  Over-the-counter  Shipper

Shipping Only:  FedEx \*  OnTrac \*  Greyhound  Other \*Service level if not Priority or Sunrise (M-F): \_\_\_\_\_

## COC Inspection

Is COC present?	<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No
Custody seals on shipping container?	<input type="checkbox"/> Intact	<input type="checkbox"/> Broken <input type="checkbox"/> Not present <input checked="" type="checkbox"/> N/A
Is COC Signed by Relinquisher? <input checked="" type="checkbox"/> Yes <input type="checkbox"/> No	<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No
Is sampler name legibly indicated on COC?	<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No
Is analysis or hold requested for all samples?	<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No
Is the turnaround time indicated on COC?	<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No
Is COC free of whiteout and uninitialed cross-outs?	<input type="checkbox"/> Yes	<input type="checkbox"/> No, Whiteout <input checked="" type="checkbox"/> No, Cross-outs

## Sample Inspection

Coolant Present: <input checked="" type="checkbox"/> Yes <input type="checkbox"/> No (includes water)	<input type="checkbox"/> Intact	<input type="checkbox"/> Broken <input checked="" type="checkbox"/> Not present

Calscience Environmental Laboratories, Inc. (Calscience) certifies that the test results provided in this report meet all NELAC requirements for parameters for which accreditation is required or available. Any exceptions to NELAC requirements are noted in the case narrative. The original report of subcontracted analyses, if any, is attached to this report. The results in this report are limited to the sample(s) tested and any reproduction thereof must be made in its entirety. The client or recipient of this report is specifically prohibited from making material changes to said report and, to the extent that such changes are made, Calscience is not responsible, legally or otherwise. The client or recipient agrees to indemnify Calscience for any defense to any litigation which may arise.

## **Contents**

Client Project Name: Tesoro - Livermore  
Work Order Number: 13-04-1673

1	Work Order Narrative . . . . .	3
2	Client Sample Data . . . . .	4
2.1	RSK-175M Carbon Dioxide (Aqueous) . . . . .	4
2.2	RSK-175M Methane (Aqueous) . . . . .	5
2.3	Combined Inorganic Tests . . . . .	6
3	Quality Control Sample Data . . . . .	7
3.1	MS/MSD and/or Duplicate . . . . .	7
3.2	LCS/LCSD . . . . .	8
4	Glossary of Terms and Qualifiers . . . . .	12
5	Chain of Custody/Sample Receipt Form . . . . .	13

**Condition Upon Receipt:**

Samples were received under Chain of Custody (COC) on 04/24/2013. They were assigned to Work Order 13-04-1673.

Unless otherwise noted on the Sample Receiving forms all samples were received in good condition and within the recommended EPA temperature criteria for the methods noted on the COC. The COC and Sample Receiving Documents are integral elements of the analytical report and are presented at the back of the report.

**Holding Times:**

All samples were analyzed within prescribed holding times (HT) and/or in accordance with the Calscience Sample Acceptance Policy unless otherwise noted in the analytical report and/or comprehensive case narrative, if required.

Any parameter identified in 40CFR Part 136.3 Table II that is designated as "analyze immediately" with an immediate holding time (HT <= 15 minutes --40CFR-136.3 Table II footnote 4), is considered a "field" test and reported samples results are not flagged unless the analysis is performed beyond 24 hours of the time of collection.

**Quality Control:**

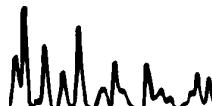

All quality control parameters (QC) were within established control limits except where noted in the QC summary forms or described further within this report.

**Additional Comments:**

Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture. All QC results are always reported on a wet weight basis.

**Subcontract Information:**

Unless otherwise noted below (or on the subcontract form), no samples were subcontracted.

## Glossary of Terms and Qualifiers

Work Order Number: 13-04-1673

<u>Qualifier</u>	<u>Definition</u>
*	See applicable analysis comment.
<	Less than the indicated value.
>	Greater than the indicated value.
1	Surrogate compound recovery was out of control due to a required sample dilution. Therefore, the sample data was reported without further clarification.
2	Surrogate compound recovery was out of control due to matrix interference. The associated method blank surrogate spike compound was in control and, therefore, the sample data was reported without further clarification.
3	Recovery of the Matrix Spike (MS) or Matrix Spike Duplicate (MSD) compound was out of control due to matrix interference. The associated LCS and/or LCSD was in control and, therefore, the sample data was reported without further clarification.
4	The MS/MSD RPD was out of control due to matrix interference. The LCS/LCSD RPD was in control and, therefore, the sample data was reported without further clarification.
5	The PDS/PDSD or PES/PESD associated with this batch of samples was out of control due to a matrix interference effect. The associated batch LCS/LCSD was in control and, hence, the associated sample data was reported without further clarification.
6	Surrogate recovery below the acceptance limit.
7	Surrogate recovery above the acceptance limit.
B	Analyte was present in the associated method blank.
BU	Sample analyzed after holding time expired.
BV	Sample received after holding time expired.
E	Concentration exceeds the calibration range.
ET	Sample was extracted past end of recommended max. holding time.
HD	The chromatographic pattern was inconsistent with the profile of the reference fuel standard.
HDH	The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but heavier hydrocarbons were also present (or detected).
HDL	The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but lighter hydrocarbons were also present (or detected).
J	Analyte was detected at a concentration below the reporting limit and above the laboratory method detection limit. Reported value is estimated.
ME	LCS/LCSD Recovery Percentage is within Marginal Exceedance (ME) Control Limit range.
ND	Parameter not detected at the indicated reporting limit.
Q	Spike recovery and RPD control limits do not apply resulting from the parameter concentration in the sample exceeding the spike concentration by a factor of four or greater.
SG	The sample extract was subjected to Silica Gel treatment prior to analysis.
X	% Recovery and/or RPD out-of-range.
Z	Analyte presence was not confirmed by second column or GC/MS analysis.
	Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture. All QC results are reported on a wet weight basis.

For any analysis identified as a "field" test with a holding time (HT) <= 15 minutes where the sample is received outside of HT, Calscience will adhere to its internal HT of 24 hours. In cases where sample analysis does not meet Calscience's internal HT, results will be appropriately qualified.

## Laboratory Results

Scott Stromberg  
Arctos Environmental  
2332 5th St., Suite A  
Berkeley, CA 94610

Subject : 12 Water Samples  
Project Name : Tesoro - Livermore  
Project Number : 01LV

Dear Mr. Stromberg,

Chemical analysis of the samples referenced above has been completed. Summaries of the data are contained on the following pages. Sample(s) were received under documented chain-of-custody. US EPA protocols for sample storage and preservation were followed. Testing procedures comply with the 2003 NELAC and TNI 2009 standards. Laboratory results relate only to the samples tested. This report may be freely reproduced in full, but may only be reproduced in part with the express permission of Kiff Analytical, LLC. Kiff Analytical, LLC is certified by the State of California under the National Environmental Laboratory Accreditation Program (NELAP), lab # 08263CA. If you have any questions regarding procedures or results, please call me at 530-297-4800.

Sincerely,

A handwritten signature in black ink that reads "Troy G. Turpen".

Troy Turpen

## Case Narrative

Samples IP-5, MW-2, MW-8, DW-3, MW-9, MW-7 and DW-7 were filtered in the laboratory for metals analysis.

The Method Reporting Limit for Ethanol has been increased due to the presence of an interfering compound for sample MW-2.

Matrix Spike/Matrix Spike Duplicate results associated with samples DW-3, DW-7, IP-5, MW-2, MW-7, MW-8, and MW-9 for the analyte Nitrate as N were outside of control limits. This may indicate a bias for the sample that was spiked. Since the LCS recoveries were within control limits, no data are flagged.

Matrix Spike/Matrix Spike Duplicate results associated with samples DW-3, DW-7, IP-5, MW-2, MW-7, MW-8, and MW-9 for the analyte Ferrous Iron were outside of control limits. This may indicate a bias for the sample that was spiked. Since the LCS recoveries were within control limits, no data are flagged.

Matrix Spike/Matrix Spike Duplicate results associated with samples DW-3, DW-7, IP-5, MW-2, MW-7, MW-8, and MW-9 for the analyte Sulfate were affected by the analyte concentration present in the un-spiked sample. Recoveries were calculated using data points beyond the calibration range.

Matrix Spike/Matrix Spike Duplicate results associated with samples IP-5, MW-2, MW-8, DW-3, MW-9, MW-7, and DW-7 for the analyte Dissolved Sodium were affected by the analyte concentrations already present in the un-spiked sample.

Project ID:

Tesoro - Livermore

Method of Receipt:  Courier  Over-the-counter  ShipperShipping Only:  FedEx \*  OnTrac \*  Greyhound  Other \*Service level if not Priority or Sunrise (M-F): \_\_\_\_\_**COC Inspection**

Is COC present?

 Yes No

Custody seals on shipping container?

 Intact Broken Not present  N/AIs COC Signed by Relinquisher?  Yes  No

Dated?

 Yes No

Is sampler name legibly indicated on COC?

 Yes No

Is analysis or hold requested for all samples?

 Yes No

Is the turnaround time indicated on COC?

 Yes No

Is COC free of whiteout and uninitialed cross-outs?

 Yes No, Whiteout  No, Cross-outs**Sample Inspection**Coolant Present:  Yes  No (includes water)Temperature °C 1.6 Therm. ID# IR-1 Initial TJB Date/Time 042313/1743  N/A

Are there custody seals on sample containers?

 Intact Broken Not presentDo containers match COC?  Yes  No  No, COC lists absent sample(s) No, Extra sample(s) present

Are there samples matrices other than soil, water, air or carbon?

 Yes No

Are any sample containers broken, leaking or damaged?

 Yes NoAre preservatives indicated?  Yes, on sample containers Yes, on COC Not indicated  N/A

Are preservatives correct for analyses requested?

 Yes No

Are samples within holding time for analyses requested?

 Yes No

Are the correct sample containers used for the analyses requested?

 Yes No

Is there sufficient sample to perform testing?

 Yes No

Does any sample contain product, have strong odor or are otherwise suspected to be hot?

 Yes No

Calscience Environmental Laboratories, Inc. (Calscience) certifies that the test results provided in this report meet all NELAC requirements for parameters for which accreditation is required or available. Any exceptions to NELAC requirements are noted in the case narrative. The original report of subcontracted analyses, if any, is attached to this report. The results in this report are limited to the sample(s) tested and any reproduction thereof must be made in its entirety. The client or recipient of this report is specifically prohibited from making material changes to said report and, to the extent that such changes are made, Calscience is not responsible, legally or otherwise. The client or recipient agrees to indemnify Calscience for any defense to any litigation which may arise.

## **Contents**

Client Project Name: Tesoro - Livermore  
Work Order Number: 13-04-1777

1	Work Order Narrative . . . . .	3
2	Client Sample Data . . . . .	4
2.1	RSK-175M Carbon Dioxide (Aqueous) . . . . .	4
2.2	RSK-175M Methane (Aqueous) . . . . .	6
2.3	Combined Inorganic Tests . . . . .	8
3	Quality Control Sample Data . . . . .	10
3.1	MS/MSD and/or Duplicate . . . . .	10
3.2	LCS/LCSD . . . . .	11
4	Glossary of Terms and Qualifiers . . . . .	16
5	Chain of Custody/Sample Receipt Form . . . . .	17

**Condition Upon Receipt:**

Samples were received under Chain of Custody (COC) on 04/25/2013. They were assigned to Work Order 13-04-1777.

Unless otherwise noted on the Sample Receiving forms all samples were received in good condition and within the recommended EPA temperature criteria for the methods noted on the COC. The COC and Sample Receiving Documents are integral elements of the analytical report and are presented at the back of the report.

**Holding Times:**

All samples were analyzed within prescribed holding times (HT) and/or in accordance with the Calscience Sample Acceptance Policy unless otherwise noted in the analytical report and/or comprehensive case narrative, if required.

Any parameter identified in 40CFR Part 136.3 Table II that is designated as "analyze immediately" with an immediate holding time (HT <= 15 minutes --40CFR-136.3 Table II footnote 4), is considered a "field" test and reported samples results are not flagged unless the analysis is performed beyond 24 hours of the time of collection.

**Quality Control:**

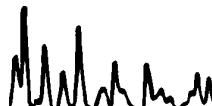

All quality control parameters (QC) were within established control limits except where noted in the QC summary forms or described further within this report.

**Additional Comments:**

Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture. All QC results are always reported on a wet weight basis.

**Subcontract Information:**

Unless otherwise noted below (or on the subcontract form), no samples were subcontracted.

## Glossary of Terms and Qualifiers

Work Order Number: 13-04-1777

<u>Qualifier</u>	<u>Definition</u>
*	See applicable analysis comment.
<	Less than the indicated value.
>	Greater than the indicated value.
1	Surrogate compound recovery was out of control due to a required sample dilution. Therefore, the sample data was reported without further clarification.
2	Surrogate compound recovery was out of control due to matrix interference. The associated method blank surrogate spike compound was in control and, therefore, the sample data was reported without further clarification.
3	Recovery of the Matrix Spike (MS) or Matrix Spike Duplicate (MSD) compound was out of control due to matrix interference. The associated LCS and/or LCSD was in control and, therefore, the sample data was reported without further clarification.
4	The MS/MSD RPD was out of control due to matrix interference. The LCS/LCSD RPD was in control and, therefore, the sample data was reported without further clarification.
5	The PDS/PDSD or PES/PESD associated with this batch of samples was out of control due to a matrix interference effect. The associated batch LCS/LCSD was in control and, hence, the associated sample data was reported without further clarification.
6	Surrogate recovery below the acceptance limit.
7	Surrogate recovery above the acceptance limit.
B	Analyte was present in the associated method blank.
BU	Sample analyzed after holding time expired.
BV	Sample received after holding time expired.
E	Concentration exceeds the calibration range.
ET	Sample was extracted past end of recommended max. holding time.
HD	The chromatographic pattern was inconsistent with the profile of the reference fuel standard.
HDH	The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but heavier hydrocarbons were also present (or detected).
HDL	The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but lighter hydrocarbons were also present (or detected).
J	Analyte was detected at a concentration below the reporting limit and above the laboratory method detection limit. Reported value is estimated.
ME	LCS/LCSD Recovery Percentage is within Marginal Exceedance (ME) Control Limit range.
ND	Parameter not detected at the indicated reporting limit.
Q	Spike recovery and RPD control limits do not apply resulting from the parameter concentration in the sample exceeding the spike concentration by a factor of four or greater.
SG	The sample extract was subjected to Silica Gel treatment prior to analysis.
X	% Recovery and/or RPD out-of-range.
Z	Analyte presence was not confirmed by second column or GC/MS analysis.
	Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture. All QC results are reported on a wet weight basis.

For any analysis identified as a "field" test with a holding time (HT) <= 15 minutes where the sample is received outside of HT, Calscience will adhere to its internal HT of 24 hours. In cases where sample analysis does not meet Calscience's internal HT, results will be appropriately qualified.

## Laboratory Results

Scott Stromberg  
Arctos Environmental  
2332 5th St., Suite A  
Berkeley, CA 94610

Subject : 16 Water Samples  
Project Name : Tesoro - Livermore  
Project Number : 01LV

Dear Mr. Stromberg,

Chemical analysis of the samples referenced above has been completed. Summaries of the data are contained on the following pages. Sample(s) were received under documented chain-of-custody. US EPA protocols for sample storage and preservation were followed. Testing procedures comply with the 2003 NELAC and TNI 2009 standards. Laboratory results relate only to the samples tested. This report may be freely reproduced in full, but may only be reproduced in part with the express permission of Kiff Analytical, LLC. Kiff Analytical, LLC is certified by the State of California under the National Environmental Laboratory Accreditation Program (NELAP), lab # 08263CA. If you have any questions regarding procedures or results, please call me at 530-297-4800.

Sincerely,

Troy Turpen

## Case Narrative

The Method Reporting Limit for Methanol has been increased due to the presence of an interfering compound for samples DW-2, MW-12, MW-6 and DW-8.

The Method Reporting Limit for Ethanol has been increased due to the presence of an interfering compound for samples MW-12, DW-5, DW-8 and IP-10.

Matrix Spike/Matrix Spike Duplicate results associated with samples DW-2, DW-5, DW-6, DW-8, DW-9, IP-1, IP-10, MW-11, MW-12, and MW-6 for the analyte Nitrate as N were outside of control limits. This may indicate a bias for the sample that was spiked. Since the LCS recoveries were within control limits, no data are flagged.

Matrix Spike/Matrix Spike Duplicate results associated with samples DW-2, DW-5, DW-6, DW-8, DW-9, IP-1, IP-10, MW-11, MW-12, and MW-6 for the analyte Ferrous Iron were outside of control limits. This may indicate a bias for the sample that was spiked. Since the LCS recoveries were within control limits, no data are flagged.

Samples DW-2, DW-9, MW-12, DW-6, MW-11, DW-5, MW-6, DW-8, IP-1 and IP-10 were filtered in the laboratory for metals analysis.

Matrix Spike/Matrix Spike Duplicate results associated with samples DW-2, DW-9, MW-12, DW-6, MW-11, DW-5, MW-6, DW-8, IP-1, and IP-10 for the analyte Dissolved Sodium were affected by the analyte concentrations already present in the un-spiked sample.

For sample MW-6, the result for Ferrous Iron was unexpectedly higher than the result for Dissolved Iron. This discrepancy may be due to varying concentrations between the bottles.

## SAMPLE RECEIPT CHECKLIST

SRG#:

84690

Date: 042413

Project ID:

Tesoro - Livermore

Method of Receipt:  Courier  Over-the-counter  ShipperShipping Only:  FedEx \*  OnTrac \*  Greyhound  Other \*Service level if not Priority or Sunrise (M-F): \_\_\_\_\_**COC Inspection**

Is COC present?

 Yes No

Custody seals on shipping container?

 Intact BrokenIs COC Signed by Relinquisher?  Yes  No Yes No

Is sampler name legibly indicated on COC?

 Yes No

Is analysis or hold requested for all samples?

 Yes No

Is the turnaround time indicated on COC?

 Yes No

Is COC free of whiteout and uninitialed cross-outs?

 Yes No, Whiteout  No, Cross-outs**Sample Inspection**Coolant Present:  Yes  No (includes water)Temperature °C 50 Therm. ID# FR-1 Initial TJB Date/Time 042413/1736  N/AAre there custody seals on sample containers?  Intact  Broken  Not presentDo containers match COC?  Yes  No  No, COC lists absent sample(s)  No, Extra sample(s) presentAre there samples matrices other than soil, water, air or carbon?  Yes  NoAre any sample containers broken, leaking or damaged?  Yes  NoAre preservatives indicated?  Yes, on sample containers  Yes, on COC  Not indicated  N/AAre preservatives correct for analyses requested?  Yes  No  N/AAre samples within holding time for analyses requested?  Yes  NoAre the correct sample containers used for the analyses requested?  Yes  NoIs there sufficient sample to perform testing?  Yes  NoDoes any sample contain product, have strong odor or are otherwise suspected to be hot?  Yes  No

## Receipt Details

Matrix WA Container type VOA # of containers received 87

Matrix WA Container type Poly # of containers received 49

Matrix Container type # of containers received

Date and Time Sample Put into Temp Storage Date: 042413 Time: 1820

**Quicklog**Are the Sample ID's indicated:  On COC  On sample container(s)  On Both  Not indicatedIf Sample ID's are listed on both COC and containers, do they all match?  Yes  No  N/AIs the Project ID indicated:  On COC  On sample container(s)  On Both  Not indicatedIf project ID is listed on both COC and containers, do they all match?  Yes  No  N/AAre the sample collection dates indicated:  On COC  On sample container(s)  On Both  Not indicatedIf collection dates are listed on both COC and containers, do they all match?  Yes  No  N/AAre the sample collection times indicated:  On COC  On sample container(s)  On Both  Not indicatedIf collection times are listed on both COC and containers, do they all match?  Yes  No  N/A

**COMMENTS:** Sample IP-10 is listed twice on the COC with a total of 10 VOA containers. SR only received 7 VOA containers and will log in seven containers until further classification from CS 2013-042413 1820

Calscience Environmental Laboratories, Inc. (Calscience) certifies that the test results provided in this report meet all NELAC requirements for parameters for which accreditation is required or available. Any exceptions to NELAC requirements are noted in the case narrative. The original report of subcontracted analyses, if any, is attached to this report. The results in this report are limited to the sample(s) tested and any reproduction thereof must be made in its entirety. The client or recipient of this report is specifically prohibited from making material changes to said report and, to the extent that such changes are made, Calscience is not responsible, legally or otherwise. The client or recipient agrees to indemnify Calscience for any defense to any litigation which may arise.

## **Contents**

Client Project Name: Tesoro Livermore  
Work Order Number: 13-04-1874

1	Work Order Narrative . . . . .	3
2	Client Sample Data . . . . .	4
2.1	RSK-175M Carbon Dioxide (Aqueous) . . . . .	4
2.2	RSK-175M Methane (Aqueous) . . . . .	6
2.3	Combined Inorganic Tests . . . . .	8
3	Quality Control Sample Data . . . . .	10
3.1	MS/MSD and/or Duplicate . . . . .	10
3.2	LCS/LCSD . . . . .	11
4	Glossary of Terms and Qualifiers . . . . .	15
5	Chain of Custody/Sample Receipt Form . . . . .	16

**Condition Upon Receipt:**

Samples were received under Chain of Custody (COC) on 04/26/2013. They were assigned to Work Order 13-04-1874.

Unless otherwise noted on the Sample Receiving forms all samples were received in good condition and within the recommended EPA temperature criteria for the methods noted on the COC. The COC and Sample Receiving Documents are integral elements of the analytical report and are presented at the back of the report.

**Holding Times:**

All samples were analyzed within prescribed holding times (HT) and/or in accordance with the Calscience Sample Acceptance Policy unless otherwise noted in the analytical report and/or comprehensive case narrative, if required.

Any parameter identified in 40CFR Part 136.3 Table II that is designated as "analyze immediately" with an immediate holding time (HT <= 15 minutes --40CFR-136.3 Table II footnote 4), is considered a "field" test and reported samples results are not flagged unless the analysis is performed beyond 24 hours of the time of collection.

**Quality Control:**

All quality control parameters (QC) were within established control limits except where noted in the QC summary forms or described further within this report.

**Additional Comments:**

Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture. All QC results are always reported on a wet weight basis.

**Subcontract Information:**

Unless otherwise noted below (or on the subcontract form), no samples were subcontracted.

## Glossary of Terms and Qualifiers

Work Order Number: 13-04-1874

<u>Qualifier</u>	<u>Definition</u>
*	See applicable analysis comment.
<	Less than the indicated value.
>	Greater than the indicated value.
1	Surrogate compound recovery was out of control due to a required sample dilution. Therefore, the sample data was reported without further clarification.
2	Surrogate compound recovery was out of control due to matrix interference. The associated method blank surrogate spike compound was in control and, therefore, the sample data was reported without further clarification.
3	Recovery of the Matrix Spike (MS) or Matrix Spike Duplicate (MSD) compound was out of control due to matrix interference. The associated LCS and/or LCSD was in control and, therefore, the sample data was reported without further clarification.
4	The MS/MSD RPD was out of control due to matrix interference. The LCS/LCSD RPD was in control and, therefore, the sample data was reported without further clarification.
5	The PDS/PDSD or PES/PESD associated with this batch of samples was out of control due to a matrix interference effect. The associated batch LCS/LCSD was in control and, hence, the associated sample data was reported without further clarification.
6	Surrogate recovery below the acceptance limit.
7	Surrogate recovery above the acceptance limit.
B	Analyte was present in the associated method blank.
BU	Sample analyzed after holding time expired.
BV	Sample received after holding time expired.
E	Concentration exceeds the calibration range.
ET	Sample was extracted past end of recommended max. holding time.
HD	The chromatographic pattern was inconsistent with the profile of the reference fuel standard.
HDH	The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but heavier hydrocarbons were also present (or detected).
HDL	The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but lighter hydrocarbons were also present (or detected).
J	Analyte was detected at a concentration below the reporting limit and above the laboratory method detection limit. Reported value is estimated.
ME	LCS/LCSD Recovery Percentage is within Marginal Exceedance (ME) Control Limit range.
ND	Parameter not detected at the indicated reporting limit.
Q	Spike recovery and RPD control limits do not apply resulting from the parameter concentration in the sample exceeding the spike concentration by a factor of four or greater.
SG	The sample extract was subjected to Silica Gel treatment prior to analysis.
X	% Recovery and/or RPD out-of-range.
Z	Analyte presence was not confirmed by second column or GC/MS analysis.
	Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture. All QC results are reported on a wet weight basis.

For any analysis identified as a "field" test with a holding time (HT) <= 15 minutes where the sample is received outside of HT, Calscience will adhere to its internal HT of 24 hours. In cases where sample analysis does not meet Calscience's internal HT, results will be appropriately qualified.

### **Vapor Sample Collection**

Vapor samples were collected using a vacuum chamber with a Tedlar bag. Sample lines were 1/4-inch-diameter Teflon or new vinyl tubing with a length not exceeding 10 feet. Generally, the length of tubing was the minimum necessary to connect the sample source to the sampling apparatus. Samples bags were made of Tedlar film with a minimum thickness of 0.002 inches.

An airtight rigid vacuum chamber was used when the bags were filled by applying vacuum. The chamber was opaque (to decrease sample degradation due to ultraviolet light) except for a small window that allowed the sampler to check the condition of the bag during sampling. The chamber had the necessary couplings to connect with sample bags, sample line, and vacuum line and a flow control valve to shut off the flow to the bag. The chamber was also equipped with a vacuum relief valve to protect both the bag and container. An oil-less vacuum pump with a minimum capacity of 2 liters per minute was used. If it was necessary to observe the sampling rate, a rotameter (or equivalent) flowmeter was used with a range of 0.05 to 1.0 liter per minute. All connections were leak checked before collecting gas samples. To leak check the connections, a Tedlar bag was placed inside the rigid container with the valve on the bag closed. The vacuum pump was turned on and the vacuum monitored until 15 inches of water column was maintained.

The following procedures were followed when collecting a vapor sample for laboratory analysis:

1. Assemble the sample train and check the connections for leaks.
2. Place an open Tedlar bag inside the vacuum chamber and connect both the Tedlar bag and vacuum line to the sample train.
3. Turn on the vacuum pump and open the desired sample port or wellhead valve.
4. Wait for the sample line to be purged of 3 to 5 casing volumes.
5. Switch the vacuum line from the sample train to the chamber and allow the chamber vacuum to inflate the Tedlar bag.
6. Fill the Tedlar bag to approximately 80 percent capacity.
7. Close the sample port and turn off the vacuum pump.

8. Release the vacuum on the chamber by disconnecting the vacuum line.
9. Open the chamber and close the Tedlar bag.

Once collected, vapor samples were stored and shipped in an opaque container free of sharp edges, metal closures, or staples to protect the integrity of the Tedlar bag. Vapor samples collected in Tedlar bags were analyzed by a State-certified analytical laboratory within 72 hours of collection.

### **Analytical Plan**

The vapor samples were submitted to Kiff Analytical LLC, a State-certified laboratory in Davis, California, and analyzed for the following parameters:

- Total petroleum hydrocarbons as gasoline; benzene, toluene, ethylbenzene, and total xylenes; and methyl tert-butyl ether using Environmental Protection Agency Method 8260B

#### *Analytical Quality Assurance Quality Control (QA/QC) Procedures*

Laboratory analytical QA/QC procedures are described in Attachment A.

## Key to Log of Boring / Well

Sheet 1 of 1

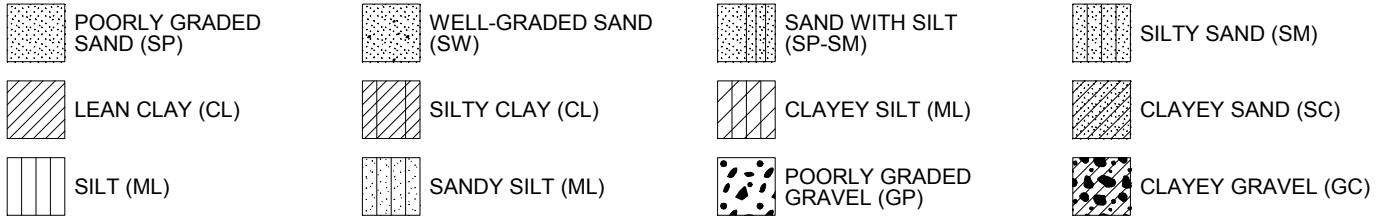

Elevation, feet	Depth, feet	SAMPLES		Graphic Log	MATERIAL DESCRIPTION	Well Completion Diagram	Headspace PID, ppm	Background PID, ppm	Drilling Progress, 24-hour clock	REMARKS
1	2	3	4	5	6	7	8	9	10	11

### COLUMN DESCRIPTIONS

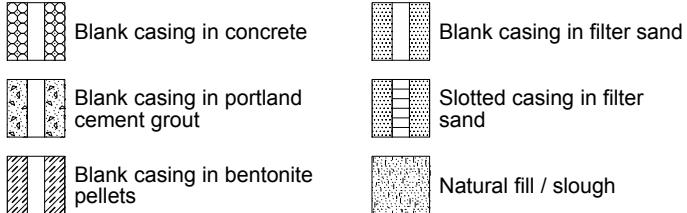

- 1 Elevation:** Elevation in feet relative to mean sea level (MSL).
- 2 Depth:** Depth in feet below the ground surface.
- 3 Sample Type:** Type of soil sample collected at depth interval shown; sampler symbols are explained below.
- 4 Sample Number:** Sample identification number.
- 5 Graphic Log:** Graphic depiction of subsurface material encountered; typical symbols are explained below.
- 6 Material Description:** Description of material encountered; in addition to soil classification and USCS, may include consistency, moisture, color, plasticity, and grain size.

- 7 Well Completion Diagram:** Schematic of well installation in borehole; materials and depths are listed in header block; graphics are explained below.
- 8 Headspace PID:** Photoionization device (PID) field sample headspace reading in parts per million (ppm).
- 9 Background PID:** Photoionization device (PID) background reading in parts per million (ppm).
- 10 Drilling Progress:** Time (in 24-hour clock) at sampling and other events during downhole advance.
- 11 Remarks:** Comments and observations regarding drilling or sampling made by driller or field personnel.

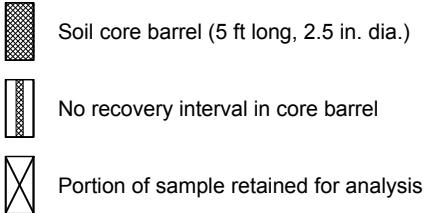

### TYPICAL SOIL GRAPHIC SYMBOLS

### TYPICAL WATER SAMPLING GRAPHIC SYMBOLS

### TYPICAL SAMPLER GRAPHIC SYMBOLS

### OTHER GRAPHIC SYMBOLS

- 

### GENERAL NOTES

1. Soil classifications are based on the Unified Soil Classification System. Descriptions and stratum lines are interpretive; actual lithologic changes may be gradual. Field descriptions may have been modified to reflect results of lab tests.
2. Descriptions on these logs apply only at the specific boring locations and at the time the borings were advanced. They are not warranted to be representative of subsurface conditions at other locations or times.
