Subject: Hagstrom Properties, 265-30th Street, Oakland, CA

Dear Mr. Hwang:

Compliance & Closure, Inc. (CCI) is in receipt of your letter dated July 21, 1999 requesting the Work Plan for Preliminary Site Investigation dated July 2, 1996 be initiated at the Hagstrom Properties site, located at 265-30th Street in Oakland, California. The Work Plan calls for drilling two soil borings near the location of the former fuel tanks along 30th Street at the subject site. The purpose of the soil borings is to profile the soil conditions below the former excavation area in order to determine if petroleum hydrocarbons have impacted the subsurface soil and groundwater. At your request the samples will be analyzed for total petroleum hydrocarbons as gasoline (TPHg), benzene, toluene, ethylbenzene and total xylenes (BTEX), methyl-t-butyl ether (MTBE) and total extractable petroleum hydrocarbons as diesel and fuel oil.

Upon receiving authorization from Hagstrom Properties, CCI will conduct the work in a timely manor. Once the field work is completed, a written report will be completed and submitted to Alameda County Environmental Health Services for its review.

Please find attached copies of the soil disposal manifests for soil generated during the fuel tank removal in February 1996. If you have any questions or require additional information, please call our office at (925) 426-5395.

Sincerely,  
Compliance & Closure, Inc.

Pleasanton, CA. 94566

RE: DESCRIPTION OF SOIL REMOVAL, TRANSPORTATION AND DISPOSAL  
ACTIVITIES FOR 265 30TH STREET, OAKLAND, CA.

Dear Mr. Mulkey

In accordance with TAC Environmental services contract agreement for environmental site restoration services, loading, transportation and disposal activities to remove contaminated soil generated by the removal and over-excavation of two (2) 8,000 gallon Underground Waste/Fuel Oil storage tanks, commenced at the above mentioned property February 14, 1996.

All contaminated soil loading and site clean up procedures were accomplished by qualified personnel, within appropriate environmental guidelines, and in accordance with strict OSHA safety standards. Contaminated soil loading procedures were accomplished utilizing TAC Environmental personnel.

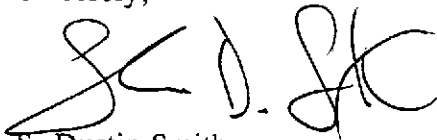

Approximately 252 cubic yards of contaminated soil was removed during activities conducted on February 14, 1996. All contaminated soil was transported under proper manifesting procedures, to the BFI Vasco Road landfill located in Livermore, CA. BFI Vasco Road, is a California State licensed and Federally governed Class II and Class III facility. In addition 36 cubic yards of non-contaminated concrete material (generated by the demolition of the overlying sidewalk) was transported and disposed of at Bauman Yard located in Richmond CA. Contaminated soil and non-contaminated concrete was loaded directly into tractor trailer end dump type transporters, operated by Denbeste Transportation Inc of Windsor, CA.

Due to time constraints caused by limited space and reduced mobility at the site, further removal, transportation and disposal activities were required on February 15, 1996.

Approximately 45 cubic yards of contaminated soil was removed and disposed of at the above mentioned BFI Vasco Road facility during this period of activity. Furthermore, an additional 36 cubic yards of non-contaminated concrete material was removed and disposed of at Bauman Yard in Richmond CA. Upon completion of soil and concrete removal procedures, basic site housekeeping practices and maintenance functions were performed to restore the safe nature of the location prior to removal activities.

TAC environmental services would like thank you for utilizing our services. If you have any questions regarding this report or any other matters please feel free to contact us.

Sincerely,

S. Dustin Smith  
Environmental Specialist

David C. Solis P.E.  
Vice President/Sr. Project Manager
