QUARTERLY SUMMARY REPORT

July - September 1992

Date: October 1, 1992

RAS #7-0104
1725 Park Street
Alameda, California

WORK PERFORMED THIS QUARTER:

10495 580

On July 16, 1992, HLA sampled all seven groundwater monitoring wells as part of a continuing monitoring program. During July 1992, potentiometric surface elevations ranged from 10.17 to 10.88 feet MSL and a petroleum sheen was encountered in Wells MW-2 and MW-5.

On September 15, 16, and 23, HLA performed on offsite groundwater investigation. A total of 21 groundwater samples were collected from temporary well points in the vicinity of the site. The results of this investigation will be used to evaluate the potential contribution of offsite sources to downgradient contamination and to select the most appropriate downgradient well location(s).
