Start: Thu 4/2/2009 4:00 PM
End: Thu 4/2/2009 4:20 PM
Duration: 20 minutes

Discussed well locations with James Barnard. He said that people in his office have had good results in sand units using ozone sparge and that given the mobility of the MTBE plume, placing pilot test performance points within 2 feet of the well will cause short circuiting into that well. He did say that he would move MW-11 downgradient at 10 feet and send a revised map. Delta will submit a pilot test work plan in addition to this work plan proposing 30 days injection. If no influence is observed within two days, the ozone injection amount will be increased. The pilot test work plan will be submitted after the wells are installed.
