Attending: Dave DeWitt, TOSCO
Dave Vossler, Gethler Ryan
Madhuella Logan, ACDEH
Juliet Shui, ACDEH

Reviewed over the revisions to the risk assessment. We requested that the following additional changes be made:

- 1) They will use a crack factor of 0.005
- 2) They will use half the detection limits for benzene conc. in samples that were "ND"
- 3) They will input Tier 2 pathway, SSTL, instead of the RBSLs, which may be too low.
- 4) They will only take the soil samples from 5' + above for the Construction Worker Scenario.

Dave Vossler said that he would fax the changes tomorrow.
