

Meeting - Gloriatorium

1-15-01

Julia Sharp, Taylor Bennett (LFR), Bruce Page  
Betty Graham (ALSO CB)

• During August '00 sampling of LFR-1, PCE concentrations were 2.8 ug/l. Presampled following week, and levels dropped to ~800 ug/l. Pumped 3 days in hopes of reducing PCE; levels shot back up to 1700 ug/l PCE. Why?

• 473 gtr '00 report due this week week

• Tentative schedule of sampling week of 1/12/01

• Transducers in interval wells to plot GW levels to track GW fluctuations, in addition to a monitor well (LFR-2?) @ various times to track how GW mounds (depressions occur, work activities, drain events, etc.

• Roof drains to floor drains - how many?

• Other floor drains? LFR to search for others

• Additional sampling pts between GW-3/LFR-4? west of LFR-1

• Same sampling schedule for wells

• LFR-1 questions still in the air

• GW-4 sampling to occur periodically (annually - 7<sup>th</sup> of yr)

1-15-01 ✓ FAX GW conc. data to Bruce/LFR from Unocal site:

- 910/524-5033 - Bruce Page

- 510/652-2246 FAX LFR
