Re: Chevron Service Station No. 9-1851  
451 Hegenberger Road  
Oakland, CA

I have reviewed the attached report dated May 10, 2010.

I agree with the conclusions and recommendations presented in the referenced report. The information in this report is accurate to the best of my knowledge and all local Agency/Regional Board guidelines have been followed. This report was prepared by Conestoga-Rovers & Associates, upon whose assistance and advice I have relied.

This letter is submitted pursuant to the requirements of California Water Code Section 13267(b)(1) and the regulating implementation entitled Appendix A pertaining thereto.

I declare under penalty of perjury that the foregoing is true and correct to the best of my knowledge.

Sincerely,

Aaron Costa  
Project Manager

Re: First Quarter 2010 Groundwater Monitoring and Sampling Report  
Former Chevron Service Station 9-1851  
451 Hegenberger Road  
Oakland, California  
Fuel Leak Case No. RO0000464

Dear Mr. Mark Detterman:

Conestoga-Rovers & Associates (CRA) is submitting this *First Quarter 2010 Groundwater Monitoring and Sampling Report* on behalf of Chevron Environmental Management Company (Chevron), for the site referenced above. Groundwater monitoring data is being submitted in accordance with the reporting requirements of 23CCR2652d. Presented below are the site background, current monitoring and sampling results, CRA's conclusions, and anticipated future activities.

## **SITE BACKGROUND**

### *Site Description*

The site is an active fuel service station located on the northwest corner of Hegenberger and Edgewater Roads in Oakland, California (Figure 1). The site is currently operated as a "Super Stop" retail fuel service station with one building, two fuel dispenser islands, three 10,000-gallon underground gasoline storage tanks (USTs) in one tank complex, and one 10,000-gallon diesel UST in a separate tank complex (Figure 2). Chevron operated the site from 1961 to 1999. In 1982 the used-oil tank was replaced with a 1,000-gallon single wall fiberglass used-oil tank which was removed in 1998. In 1984, the existing steel tanks were replaced with three 10,000-gallon single wall fiberglass USTs. Land use near the site is commercial and industrial. To date, seven monitoring wells have been installed and one soil boring advanced.

### ***Site Geology***

In the 1940's, this area was filled with material derived from dredging, quarrying, construction and demolition sources. The fill material is estimated to be up to 50 feet thick. Prior to filling, silts and clays were deposited regionally in a tidal wetland environment.<sup>1</sup> Soils encountered beneath the site generally consist of silty and clayey sand from grade to depths of approximately 5 to 10 feet below grade (fbg), underlain by silty sand and clay to 16.5 fbg, the total depth explored.

### ***Hydrogeology***

The site is located in the Santa Clara Valley Groundwater Basin, East Bay Plain Subbasin, near the boundary of the Oakland and San Leandro Sub Basins. Groundwater in this subbasin has been designated potentially beneficial for agricultural, municipal, and industrial uses.<sup>2</sup> However, since this area has been backfilled with artificial fill, it is unlikely that the shallow water-bearing zone would be utilized as a drinking water resource. Groundwater flow direction in the basin typically flows along surface topography towards San Francisco Bay. Site topography is relatively flat at an elevation of approximately 3 feet above mean sea level, with the surrounding topography sloping towards the southwest. The nearest surface water is San Leandro Creek, which is located approximately ¼-mile west of the site. Depth to groundwater has historically ranged from approximately 2 to 8 fbg. Groundwater flow direction fluctuates, but is predominately to the southwest at a gradient of 0.003 to 0.06. Groundwater beneath the site has been monitored quarterly from October, 1995 to date.

## **RESULTS OF 2009 AND 2010 MONITORING EVENTS**

### ***First Quarter 2010 Groundwater Monitoring***

On March 8, 2010, Blaine Tech Services (Blaine Tech) of San Jose, California attempted to monitor and sample all site wells. Light non-aqueous phase liquid (LNAPL) hydrocarbons were detected in well MW-2 (0.05 ft). No monitoring or sampling data was collected from well MW-5 due to a parked vehicle obstructing the well. Depth to water ranged from 2.90 fbg in MW-1 to 5.70 fbg in MW-7. Groundwater flowed towards the south to southwest at a gradient of 0.037. Blaine Tech's March 9, 2010 *First Quarter 2010 Monitoring Report* is included as

Attachment A. The most recent groundwater elevation data and concentrations for total petroleum hydrocarbons as gasoline (TPHg), benzene, and methyl tertiary butyl ether (MTBE) are included on Figure 2. Lancaster Laboratories' March 20, 2010 analytical report is included as Attachment B.

Current hydrocarbon concentrations are presented and compared to environmental screening levels (ESLs) where groundwater is a potential source of drinking water<sup>3</sup> in Table A. TPHg, benzene, toluene, ethylbenzene, xylenes, and MTBE concentrations this quarter are within historical ranges and are consistent with seasonal fluctuations.

**TABLE A: SUMMARY OF ENVIRONMENTAL SCREENING LEVELS**

Well	Date	TPHg	Benzene	Toluene	Ethylbenzene	Xylenes	MTBE
<i>Groundwater ESLs</i>		100	1.0	40	30	20	5
<i>concentrations in micrograms per liter (<math>\mu\text{g/L}</math>)</i>							
MW-1	03/08/2010	<500	<0.5	<0.5	<0.5	<0.5	4
MW-2		NOT SAMPLED DUE TO PRESENCE OF LNAPL					
MW-3	03/08/2010	<50	<0.5	<0.5	<0.5	<0.5	32
MW-4	03/08/2010	<50	<0.5	<0.5	<0.5	<0.5	30
MW-5		INACCESSIBLE: VEHICLE PARKED OVER WELL					
MW-6	03/08/2010	<50	<0.5	<0.5	<0.5	<0.5	3
MW-7	03/08/2010	<50	<0.5	<0.5	<0.5	<0.5	7

<sup>3</sup> *Screening for Environmental Concerns at Sites with Contaminated Soil and Groundwater*, Prepared by the California Regional Water Quality Control Board San Francisco Bay Region, Interim Final - November 2007, (Revised May 2008), Table F-1a-Groundwater Screening Levels-Current or Potential Drinking Water Resource.

Reference No. 311976

- 4 -

### ***LNAPL Occurrence***

A LNAPL thickness of 0.05 feet was observed in well MW-2. LNAPL has been detected in MW-2 intermittently since December 2004 with a maximum thickness of 0.65 in June 2008. In September 2008 Chevron Energy Technology Company completed a fingerprint analysis of LNAPL detected in MW-2 (Attachment C). It was determined that the LNAPL consisted mainly of used lube oil, grease, or weathered crude oil with small amounts of gasoline and weathered diesel. Well MW-2 is located downgradient and adjacent to the former used-oil UST; therefore, the LNAPL likely represents motor oil.

### ***Dissolved Hydrocarbon Delineation***

The extent of dissolved phase hydrocarbons is defined by wells MW-1 to the west, MW-5 to the north, MW-6 to the east, and MW-4 and MW-7 to the south.

### ***Concentration Trends***

TPHg and benzene concentration have been below or near detection limits since September, 2008. MTBE concentrations have decreased in all wells from historic maximums.

## **CONCLUSIONS**

The first quarter 2010 sampling event results indicate:

- LNAPL thickness is stable and isolated to MW-2
- TPHg and benzene concentrations are low or below detection limits
- MTBE concentrations are, on average, three orders of magnitude below historic highs in wells MW-1, MW-3, MW-4, and MW-7

## **ANTICIPATED FUTURE ACTIVITIES**

### ***Groundwater Sampling***

Blaine Tech will gauge all site wells quarterly, sample MW-1, MW-2, and MW-4 quarterly, and sample MW-3, MW-5, MW-6, and MW-7 semi-annually during the first and third quarters.

CRA will add total petroleum hydrocarbons as motor oil (TPHmo) by EPA Method 8015 with silica gel cleanup to the analyte suite for all wells based on the fingerprint analysis. CRA will present groundwater monitoring reports within 60 days of the sampling date. CRA will include a summary of site conditions and provide recommendations in the third quarter reports.

**EXPLANATIONS:**

Groundwater data and analytical results compiled by: Blaine Tech from October, 1995 to June, 2000; Gettler-Ryan from June, 2000 to June, 2009; and Blaine Tech and CRA from June, 2009 to present.

TOC = Top of Casing

(ft.) = Feet

GWE = Groundwater Elevation

LNAPLT = Light Non-Aqueous Phase Liquid Thickness

LNAPL = Light Non-Aqueous Phase Liquid

(ft-msl) = Feet above mean sea level

DTW = Depth to Water

TPHd = Total Petroleum Hydrocarbons as Diesel

TPHg = Total Petroleum Hydrocarbons as Gasoline

B = Benzene

T = Toluene

E = Ethylbenzene

X = Xylenes

MTBE = Methyl Tertiary Butyl Ether

(ppb) = Parts per billion

( $\mu\text{g}/\text{L}$ ) = Micrograms per liter

-- = Not Measured/Not Analyzed

QA = Quality Assurance/Trip Blank

J = Estimated value

U = Compound was not detected

\* TOC elevations were surveyed on November 15, 2000, by Virgil Chavez Land Surveying. The benchmark for the survey was the letter "O" in Oakland on an inlet in the westerly curb of Oakport Road, 150' southerly of the end of curve. (Benchmark Elevation = 7.82 feet, msl).

\*\* GWE was corrected for the presence of LNAPL; correction factor: [(TOC - DTW) + (LNAPLT x 0.80)].

<sup>1</sup> Laboratory report indicates gasoline C6-C12.

<sup>2</sup> MTBE by EPA Method 8260.

<sup>3</sup> Results of EPA 8010 test indicates that the detection of 1,1-Dichloroethane (1,1-DCA) was detected at 1.7 ppb.

TABLE 1

GROUNDWATER MONITORING DATA AND ANALYTICAL RESULTS  
CHEVRON SERVICE STATION 9-1851  
451 HEGENBERGER ROAD, OAKLAND, CALIFORNIA

WELL ID/ DATE	LNAPL											
	TOC*	GWE	DTW	LNAPLT	Removed	TPHd	TPHg	B	T	E	X	MTBE
	(ft.)	(msl)	(ft.)	(ft.)	(gallons)	( $\mu\text{g}/\text{L}$ )						
4												
	Chromatogram pattern indicates an unidentified hydrocarbon.											
5												
	Results of EPA 8015 test indicates that levels of Methanol and Methyl ethyl ketone are respectively <1000 and <200 ppb.											
6												
	Confirmation run.											
7												
	Laboratory report indicates unidentified hydrocarbons >C16.											
8												
	Sample analyzed for Total Metals by EPA 200 Series Methods. All Analytes were less then the reporting limit except for Nickel was detected at 0.067 ppm and Zinc was detected at 0.024 ppm.											
9												
	Laboratory report indicates that Semi-Volatile Organic Compounds (SVOCs) by EPA Method 8270 were all less then the reporting limit except for Bis(2-ethylhexyl)phthalate was detected at 14 ppb, which may be a possible contamination.											
10												
	Data was provided by Delta Environmental Consultants, Inc.											
11												
	Laboratory report indicates sample was analyzed outside the EPA recommended holding time.											
12												
	Laboratory report indicates unidentified hydrocarbons C6-C12.											
13												
	BTEX and MTBE by EPA Method 8260.											
14												
	LNAPL + Water removed.											
15												
	Analytical result confirmed.											
16												
	Probe did not detect LNAPL but was covered with product; LNAPL was confirmed with bailer.											
17												
	Laboratory report indicates due to excessive foaming of the sample, normal reporting limits were not attained.											
18												
	Water plus 15 milliliters of product removed from well.											
19												
	The vial submitted for volatile analysis did not have a pH<2 at the time of analysis, pH = 7.											
20												
	Due to excessive foaming of the sample, normal reporting limits were not attained. <del>Laboratory report indicates the result reported for xylenes (total) is possibly the result of carryover from the sample injected prior to this sample. Since only one vial was submitted, a repeat analysis without headspace could not be performed to confirm the results</del>											
21

Monitoring performed on March 8, 2010

---

**Blaine Tech Services, Inc. Groundwater Monitoring Event 100308-JO2**

This submission covers the routine monitoring of groundwater wells conducted on March 8, 2010 at this location. Six monitoring wells were measured for depth to groundwater (DTW). Five monitoring wells were sampled. All sampling activities were performed in accordance with local, state and federal guidelines.

Water levels measurements were collected using an electronic slope indicator. All sampled wells were purged of three case volumes, depending on well recovery, or until water temperature, pH and conductivity stabilized. Purging was accomplished using electric submersible pumps, positive air-displacement pumps or stainless steel, Teflon or disposable bailers. Subsequent sample collection and sample handling was performed in accordance with EPA protocols using disposable bailers. Alternately, where applicable, wells were sampled utilizing no-purge methodology. All reused equipment was decontaminated in an integrated stainless steel sink with de-ionized water supplied Hotsy pressure washer and Liquinox or equivalent.

Samples were delivered under chain-of-custody to Lancaster Laboratories of Lancaster, Pennsylvania, for analysis. Monitoring well purgewater and equipment rinsate water was collected and transported under bill-of-lading to IWM facilities of San Jose, California.

Enclosed documentation from this event includes copies of the Well Gauging Sheet, Well Monitoring Data Sheets, and Chain-of-Custody.

Blaine Tech Services, Inc.'s activities at this site consisted of objective data and sample collection only. No interpretation of analytical results, defining of hydrogeologic conditions or formulation of recommendations was performed.

Please call if you have any questions.

Sincerely,

Dustin Becker  
Blaine Tech Services, Inc.  
Senior Project Manager

# BLAINE TECH SERVICES, INC. METHODS AND PROCEDURES FOR THE ROUTINE MONITORING OF GROUNDWATER WELLS AT CHEVRON SITES

Blaine Tech Services, Inc. performs environmental sampling and documentation as an independent third party. We specialize in groundwater monitoring assignments and intentionally limit the scope of our services to those centered on the generation of objective information.

To avoid conflicts of interest, Blaine Tech Services, Inc. personnel do not evaluate or interpret the information we collect. As a state licensed contractor (C-57 well drilling –water – 746684) performing strictly technical services, we do not make any professional recommendations and perform no consulting of any kind.

---

## SAMPLING PROCEDURES OVERVIEW

### SAFETY

All groundwater monitoring assignments performed for Chevron comply with Chevron's safety guidelines, 29 CFR 1910.120 and SB-198 Injury and Illness Prevention Program (IIPP). All Field Technicians receive the full 40-hour 29CFR 1910.120 OSHA SARA HAZWOPER course, medical clearance and on-the-job training prior to commencing any work on any Chevron site.

### INSPECTION AND GAUGING

Wells are inspected prior to evacuation and sampling. The condition of the wellhead is checked and noted according to a wellhead inspection checklist.

Standard measurements include the depth to water (DTW) and the total well depth (TD) obtained with industry standard electronic water level indicators that are graduated in increments of hundredths of a foot.

The water in each well is inspected for the presence of immiscibles. When free product is suspected, its presence is confirmed using an electronic interface probe (e.g. GeoTech). No samples are collected from a well containing over two-hundredths of a foot (0.02') of product.

### EVACUATION

Depth to water measurements are collected by our personnel prior to purging and minimum purge volumes are calculated anew for each well based on the height of the water column and the diameter of the well. Expected purge volumes are never less than three case volumes and are set at no less than four case volumes in some jurisdictions.

Well purging devices are selected on the basis of the well diameter and the total volume to be

evacuated. In most cases the well will be purged using an electric submersible pump (i.e. Grundfos) suspended near (but not touching) the bottom of the well.

## PARAMETER STABILIZATION

Well purging completion standards include minimum purge volumes, but additionally require stabilization of specific groundwater parameters prior to sample collection. Typical groundwater parameters used to measure stability are electrical conductivity, pH, and temperature. Instrument readings are obtained at regular intervals during the evacuation process (no less than once per case volume).

Stabilization standards for routine quarterly monitoring of fuel sites include the following: Temperature is considered to have stabilized when successive readings do not fluctuate more than +/- 1 degree Celsius. Electrical conductivity is considered stable when successive readings are within 10%. pH is considered to be stable when successive readings remain constant or vary no more than 0.2 of a pH unit.

## DEWATERED WELLS

Normal evacuation removes no less than three case volumes of water from the well. However, less water may be removed in cases where the well dewatered and does not immediately recharge.

## MEASURING RECHARGE

Upon completion of well purging, a depth to water measurement is collected and notated to ensure that the well has recharged to within 80% of its static, pre-purge level prior to sampling.

Wells that do not immediately show 80% recharge or dewatered wells will be allowed approximately 2 hours to recharge prior to sampling or will be sampled at site departure. All wells requiring off-site traffic control in the public right-of-way, the 80% recharge rule may be disregarded in the interests of Health and Safety. The sample may be collected as soon as there is sufficient water. The water level at time of sampling will be noted.

## PURGEWATER CONTAINMENT

All non-hazardous purgewater evacuated from each groundwater monitoring well is captured and contained in on-board storage tanks on the Sampling Vehicle and/or special water hauling trailers. Effluent from the decontamination of reusable apparatus (sounders, electric pumps and hoses etc.), consisting of groundwater combined with deionized water and non-phosphate soap, is also captured and pumped into effluent tanks.

Non-hazardous purgewater is transported under standard Bill of Lading documentation to a Blaine Tech Services, Inc. facility before being transported to a Chevron approved disposal facility.

## SAMPLE COLLECTION DEVICES

All samples are collected using disposable bailers.

## SAMPLE CONTAINERS

Sample material is decanted directly from the sampling bailer into sample containers provided by the laboratory that will analyze the samples. The transfer of sample material from the bailer to the sample container conforms to specifications contained in the USEPA T.E.G.D. The type of sample container, material of construction, method of closure and filling requirements are specific to the intended analysis. Chemicals needed to preserve the sample material are commonly placed inside the sample containers by the laboratory or glassware vendor prior to delivery of the bottle to our personnel. The laboratory sets the number of replicate containers.

## TRIP BLANKS

Trip Blanks, if requested, are taken to the site and kept inside the sample cooler for the duration of the event. They are turned over to the laboratory for analysis with the samples from that site.

## DUPLICATES

Duplicates, if requested, may be collected at a site. The Duplicate sample is collected, typically from the well containing the most measurable contaminants. The Duplicate sample is labeled the same as the original.

## SAMPLE STORAGE

All sample containers are promptly placed in food grade ice chests for storage in the field and transport (direct or via our facility) to the designated analytical laboratory. These ice chests contain quantities of restaurant grade ice as a refrigerant material. The samples are maintained in either an ice chest or a refrigerator until relinquished into the custody of the laboratory or laboratory courier.

## DOCUMENTATION CONVENTIONS

A label must be affixed to all sample containers. In most cases these labels are generated by our office personnel and are partially preprinted. Labels can also be hand written by our field personnel. The site is identified with the store number and site address, as is the particular groundwater well from which the sample is drawn (e.g. MW-1, MW-2, S-1 etc.). The time and date of sample collection along with the initials of the person who collects the sample are handwritten onto the label.

Chain of Custody records are created using client specific preprinted forms following USEPA specifications.

Bill of Lading records are contemporaneous records created in the field at the site where the non-hazardous purgewater is generated. Field Technicians use preprinted Bill of Lading forms.

## DECONTAMINATION

All equipment is brought to the site in clean and serviceable condition and is cleaned after use in each well and before subsequent use in any other well. Equipment is decontaminated before leaving the site.

The primary decontamination device is a commercial steam cleaner. The steam cleaner is detuned to function as a hot pressure washer that is then operated with high quality deionized water that is produced at our facility and stored onboard our sampling vehicle. Cleaning is facilitated by the use of proprietary fixtures and devices included in the patented workstation (U.S. Patent 5,535,775) that is incorporated in each sampling vehicle. The steam cleaner is used to decon reels, pumps and bailers.

Any sensitive equipment or parts (i.e. Dissolved Oxygen sensor membrane, water level indicator, etc.) that cannot be washed using the high pressure water, will be sprayed with a non-phosphate soap and deionized water solution and rinsed with deionized water.

## DISSOLVED OXYGEN READINGS

Dissolved Oxygen readings are taken pre- and/or post-purge using YSI meters (e.g. YSI Model 550) or HACH field test kits.

The YSI meters are able to collect accurate in-situ readings. The probe allows downhole measurements to be taken from wells with diameters as small as two inches. The probe and reel is decontaminated between wells as described above. The meter is calibrated between wells as per the instructions in the operating manual. The probe is lowered into the water column and the reading is allowed to stabilize prior to collection.

## OXYIDATON REDUCTION POTENTIAL READINGS

All readings are obtained with either Corning or Myron-L meters (e.g. Corning ORP-65 or a Myron-L Ultrameter GP). The meter is cleaned between wells as described above. The meter is calibrated at the start of each day according to the instruction manual.

## FEROUS IRON MEASUREMENTS

All field measurements are collected at time of sampling with a HACH test kit.

CHEVRON-NORTHERN CALIFORNIA TYPE A BILL OF LADING

SOURCE RECORD **BILL OF LADING**  
 FOR NON-HAZARDOUS PURGEWATER RECOVERED  
 FROM GROUNDWATER WELLS AT CHEVRON  
 FACILITIES IN THE STATE OF CALIFORNIA. THE NON-  
 HAZARDOUS PURGE- WATER WHICH HAS BEEN  
 RECOVERED FROM GROUND- WATER WELLS IS  
 COLLECTED BY THE CONTRACTOR, MADE UP INTO  
 LOADS OF APPROPRIATE SIZE AND HAULED BY IWM  
 TO THEIR FACILITY IN SAN JOSE, CALIFORNIA.

The contractor performing this work is BLAINE TECH SERVICES, INC. (BTS), 1680 Rogers Ave. San Jose CA (408)573-0555). Blaine Tech Services, Inc. is authorized by CHEVRON PRODUCTS COMPANY (CHEVRON) to recover, collect, apportion into loads, and haul the Non-Hazardous Well Purgewater that is drawn from wells at the CHEVRON facility indicated below and to deliver that purgewater to BTS. Transport routing of the Non-Hazardous Well Purgewater may be direct from one Chevron facility to BTS; from one Chevron facility to BTS via another Chevron facility; or any combination thereof. The Non-Hazardous Well Purgewater is and remains the property of CHEVRON.

This Source Record **BILL OF LADING** was initiated to cover the recovery of Non-Hazardous Well Purgewater from wells at the Chevron facility described below:

<b>CAT No.</b>	<b>Analysis Name</b>	<b>CAS Number</b>	<b>As Received</b>	<b>As Received</b>	<b>Dilution Factor</b>
			<b>Method</b>	<b>Limit of Quantitation</b>	
<b>GC/MS Volatiles</b>	<b>SW-846 8260B</b>		<b>ug/l</b>	<b>ug/l</b>	
06067	Benzene	71-43-2	N.D.	0.5	1
06067	Ethanol	64-17-5	N.D.	50	1
06067	Ethylbenzene	100-41-4	N.D.	0.5	1
06067	Methyl Tertiary Butyl Ether	1634-04-4	32	0.5	1
06067	Toluene	108-88-3	N.D.	0.5	1
06067	Xylene (Total)	1330-20-7	N.D.	0.5	1

Preservation requirements were not met. The vial submitted for volatile analysis did not have a pH < 2 at the time of analysis. Due to the volatile nature of the analytes, it is not appropriate for the laboratory to adjust the pH at the time of sample receipt. The pH of this sample was pH = 6.

## Quality Control Summary

Client Name: Chevron  
 Reported: 03/20/10 at 05:15 PM

Group Number: 1185215

Matrix QC may not be reported if site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD was performed, unless otherwise specified in the method.

## Lancaster Laboratories

### Explanation of Symbols and Abbreviations

The following defines common symbols and abbreviations used in reporting technical data:

<b>N.D.</b>	none detected	<b>BMQL</b>	Below Minimum Quantitation Level
<b>TNTC</b>	Too Numerous To Count	<b>MPN</b>	Most Probable Number
<b>IU</b>	International Units	<b>CP Units</b>	cobalt-chloroplatinate units
<b>umhos/cm</b>	micromhos/cm	<b>NTU</b>	nephelometric turbidity units
<b>C</b>	degrees Celsius	<b>F</b>	degrees Fahrenheit
<b>Cal</b>	(diet) calories	<b>lb.</b>	pound(s)
<b>meq</b>	milliequivalents	<b>kg</b>	kilogram(s)
<b>g</b>	gram(s)	<b>mg</b>	milligram(s)
<b>ug</b>	microgram(s)	<b>l</b>	liter(s)
<b>ml</b>	milliliter(s)	<b>ul</b>	microliter(s)
<b>m3</b>	cubic meter(s)	<b>fib &gt;5 um/ml</b>	fibers greater than 5 microns in length per ml
<	less than – The number following the sign is the <u>limit of quantitation</u> , the smallest amount of analyte which can be reliably determined using this specific test.		
>	greater than		
<b>ppm</b>	parts per million – One ppm is equivalent to one milligram per kilogram (mg/kg), or one gram per million grams. For aqueous liquids, ppm is usually taken to be equivalent to milligrams per liter (mg/l), because one liter of water has a weight very close to a kilogram. For gases or vapors, one ppm is equivalent to one microliter of gas per liter of gas.		
<b>ppb</b>	parts per billion		
<b>Dry weight basis</b>	Results printed under this heading have been adjusted for moisture content. This increases the analyte weight concentration to approximate the value present in a similar sample without moisture.		

U.S. EPA data qualifiers:

<b>Organic Qualifiers</b>		<b>Inorganic Qualifiers</b>	
<b>A</b>	TIC is a possible aldol-condensation product	<b>B</b>	Value is <CRDL, but $\geq$ IDL
<b>B</b>	Analyte was also detected in the blank	<b>E</b>	Estimated due to interference
<b>C</b>	Pesticide result confirmed by GC/MS	<b>M</b>	Duplicate injection precision not met
<b>D</b>	Compound quantitated on a diluted sample	<b>N</b>	Spike amount not within control limits
<b>E</b>	Concentration exceeds the calibration range of the instrument	<b>S</b>	Method of standard additions (MSA) used for calculation
<b>J</b>	Estimated value	<b>U</b>	Compound was not detected
<b>N</b>	Presumptive evidence of a compound (TICs only)	<b>W</b>	Post digestion spike out of control limits
<b>P</b>	Concentration difference between primary and confirmation columns $>25\%$	*	Duplicate analysis not within control limits
<b>U</b>	Compound was not detected	+	Correlation coefficient for MSA $<0.995$
<b>X,Y,Z</b>	Defined in case narrative		

Analytical test results for methods listed on the laboratories' accreditation scope meet all requirements of NELAC unless otherwise noted under the individual analysis.

Tests results relate only to the sample tested. Clients should be aware that a critical step in a chemical or microbiological analysis is the collection of the sample. Unless the sample analyzed is truly representative of the bulk of material involved, the test results will be meaningless. If you have questions regarding the proper techniques of collecting samples, please contact us. We cannot be held responsible for sample integrity, however, unless sampling has been performed by a member of our staff. This report shall not be reproduced except in full, without the written approval of the laboratory.

**WARRANTY AND LIMITS OF LIABILITY** – In accepting analytical work, we warrant the accuracy of test results for the sample as submitted. THE FOREGOING EXPRESS WARRANTY IS EXCLUSIVE AND IS GIVEN IN LIEU OF ALL OTHER WARRANTIES, EXPRESSED OR IMPLIED. WE DISCLAIM ANY OTHER WARRANTIES, EXPRESSED OR IMPLIED, INCLUDING A WARRANTY OF FITNESS FOR PARTICULAR PURPOSE AND WARRANTY OF MERCHANTABILITY. IN NO EVENT SHALL LANCASTER LABORATORIES BE LIABLE FOR INDIRECT, SPECIAL, CONSEQUENTIAL, OR INCIDENTAL DAMAGES INCLUDING, BUT NOT LIMITED TO, DAMAGES FOR LOSS OF PROFIT OR GOODWILL REGARDLESS OF (A) THE NEGLIGENCE (EITHER SOLE OR CONCURRENT) OF LANCASTER LABORATORIES AND (B) WHETHER LANCASTER LABORATORIES HAS BEEN INFORMED OF THE POSSIBILITY OF SUCH DAMAGES. We accept no legal responsibility for the purposes for which the client uses the test results. No purchase order or other order for work shall be accepted by Lancaster Laboratories which includes any conditions that vary from the Standard Terms and Conditions of Lancaster Laboratories and we hereby object to any conflicting terms contained in any acceptance or order submitted by client.

HYDROCARBON ANALYSIS

**CHEVRON ENERGY TECHNOLOGY COMPANY  
INTEGRATED LABORATORY TECHNOLOGIES  
PROJECT SUMMARY**

<b>Project No</b>	2008.0072	<b>Requested by</b>	A.Costa
<b>Date Initiated</b>	8/13/08	<b>Location</b>	CEMC
<b>Date Completed</b>	9/15/08		6111 Bollinger Cyn Rd
<b>CRTC Charge Code</b>	YWETS1560268		San Ramon, CA 94583
		<b>Phone</b>	(925) 543-2961

**Project Description:**

Analyze one hydrocarbon/water sample from a Chevron Service Station facility #9-1851 located on 451 Hegenberger Drive, Oakland, CA. The sample is labeled MW-2-W-ID. Identify the hydrocarbon types present.

**Results:**

The hydrocarbon/water sample contains a mixture of gasoline, diesel fuel #2 and lube oil. The gasoline fraction contains olefins, mono-aromatic (BTEX) compounds, “iso-octane” and other gasoline constituents. It is present in a low concentration, approximately 0.7 % (measured as the C<sub>10</sub>- area percent.). The toluene peak is very prominent as it is readily water soluble. The diesel fuel #2 fraction has been moderately weathered through water washing and biodegradation with branched paraffins remaining with approximately 6% (measured as the C11 to C20 area percent). There is used lube oil or grease or weathered crude oil with absence of n-paraffins. See table below for carbon number distribution.

approximate hydrocarbon concentration in water, ug/L	C6- (area %)	C7-C10 (area %)	C11-C14 (area %)	C15-C20 (area %)	C21-C45+ (area %)
304,700	0.0	0.7	1.9	5.4	92.7

**Analytical Approach:**

The samples were extracted and analyzed by gas chromatography using a flame ionization detector to determine the hydrocarbon composition.
