Thanks Mark,

Anil, the property owner, went out yesterday and counted 3 well covers which fits with what the previous case worker thought. Using Google Maps and the street view, I did not see any evidence of a well cover in the street. At this time I'll assume we're only dealing with 3 wells.

I am awaiting a bid from one of the contractor's (C-57 licensed) we use at Aerojet to destroy the wells. The plan is to get them taken care of before Dec 30th.

I'll keep you posted on the progress.

Thanks again.
Scott Neville

Scott,

Unfortunately your information is as good as mine. I presume you've looked at our online files(see link below my signature)? My knowledge is minimal since I inherited this case from another case worker and all I've got is what's in the files. The previous case worker believed there are three wells. Looking at the files and at it in Google, it could be that the well MW-3 is what is out by the street (?), especially since the wells aren't located in Geotracker.

Subject: Fuel Leak Case No RO0000478 19592 Center Street Castro Valley

Hi Mark,

I'm helping Anil Singh to arrange destruction of the shallow monitor wells at his business property (19592 Center Street Castro Valley, CA).

The information that I'm lacking is the exact number of monitor wells that need to be destroyed. I've looked through the database for the site and know that three wells have been installed. I saw a work-plan for two additional wells but did not see any document that indicated that these were ever installed. I also checked the site with Google Earth, and it looks like a fourth well may have been installed at the western edge of the property boundary.

Could you check your records and confirm for me the number of wells that require destruction?

That would be a big help for me.

Thanks,

Scott L. Neville
