QUARTERLY GROUNDWATER MONITORING REPORT
JANUARY 2002 GROUNDWATER SAMPLING

at
Lim Family Property
250 8th Street
Oakland, California

Q. ✓ Condition of remediation system - is it still operable?
if so can they add either higher iron / H2O or bentonite bagger?

1.0 INTRODUCTION

This report outlines the methods and findings of Aqua Science Engineers, Inc. (ASE)'s quarterly groundwater monitoring at the Lim family property located at 250 8th Street in Oakland, California (*Figures 1 and 2*).

2.0 GROUNDWATER FLOW DIRECTION AND GRADIENT

On January 21, 2002, ASE measured the depth to water in each site well using an electric water level sounder. The surface of the groundwater was also checked for the presence of free-floating hydrocarbons or sheen. No free-floating hydrocarbons or sheen was present on the water surface in monitoring wells MW-1, MW-2, and MW-4. ~~Monitoring well MW-3~~ contained 0.16-feet of free-floating hydrocarbons this quarter. Groundwater elevation data is presented in Table One.

A groundwater elevation (potentiometric surface) contour map is shown as Figure 2. The groundwater flow direction at the site is generally to the southwest with a gradient of 0.010 feet/foot during this quarterly sampling period. This groundwater flow direction and gradient are consistent with previous findings.

3.0 MONITORING WELL SAMPLING

On January 21, 2002, ASE also collected groundwater samples from monitoring wells MW-1, MW-2, and MW-4 for analysis. Monitoring well MW-3 was not sampled due to the presence of free-floating hydrocarbons at the time of sampling. Prior to sampling, the remaining wells were purged of four well casing volumes of groundwater using dedicated polyethylene bailers. The pH, temperature, and conductivity of the purge water was monitored during evacuation, and samples were not collected until these parameters stabilized. Samples were collected from each well using dedicated polyethylene bailers. The groundwater samples analyzed for volatile compounds were decanted from the bailers into 40-ml volatile organic analysis (VOA) vials, preserved with hydrochloric acid, sealed without headspace and labeled. The samples to be analyzed for extractable range hydrocarbons were contained in 1-liter amber glass bottles. All samples were stored on ice for transport to Kiff Analytical, LLC, (KIFF) of Davis, California under appropriate chain of custody documentation. Well sampling purge water was contained in a sealed and labeled 55-gallon steel drum and left on-site for temporary storage until

off-site disposal can be arranged. See Appendix A for a copy of the well sampling field logs.

4.0 ANALYTICAL RESULTS FOR GROUNDWATER

All groundwater samples were analyzed by KIFF for total petroleum hydrocarbons as diesel (TPH-D) by modified EPA Method 3510/8015M, total petroleum hydrocarbons as gasoline (TPH-G), benzene, toluene, ethyl benzene, total xylenes (collectively known as BTEX), lead scavengers, and methyl tertiary butyl ether (MTBE) by EPA Method 8260B. The groundwater samples collected from monitoring wells MW-2 and MW-4 were also analyzed for oil and grease (O&G) by EPA Method 1664. The analytical results are tabulated in Tables Two and Three, and copies of the certified analytical report and chain of custody form are included in Appendix B.

5.0 CONCLUSIONS

Monitoring well MW-3 contained 0.16-feet of free-floating hydrocarbons this quarter. Overall, the hydrocarbon concentrations are consistent with previous analytical results and remain elevated in downgradient monitoring wells MW-2, MW-3, and MW-4. The BTEX concentrations in groundwater samples collected from monitoring wells MW-2 and MW-4 exceeded California Department of Health Services (DHS) maximum contaminant levels (MCLs) for drinking water.

6.0 RECOMMENDATIONS

ASE is currently performing the work outlined in ASE's February 2001 workplan. ASE has completed the on-site drilling, and is waiting for the City of Oakland to issue an encroachment permit for the installation of monitoring wells in 8th Street. ASE anticipates continuing this work once the encroachment permit is received from the city.

7.0 REPORT LIMITATIONS

The results of this investigation represent conditions at the time of the groundwater sampling, at the specific locations where the samples were collected, and for the specific parameters analyzed by the laboratory. It does not fully characterize the site for contamination resulting from unknown sources, or for parameters not analyzed by the laboratory. All of the laboratory work cited in this report was prepared under the direction of an independent CAL-EPA certified laboratory. The independent laboratory is solely responsible for the contents and conclusions of the chemical analysis data.

Aqua Science Engineers appreciates the opportunity to assist The Lim Family with their environmental needs. Should you have any questions or comments, please feel free to call us at (925) 820-9391.

Respectfully submitted,

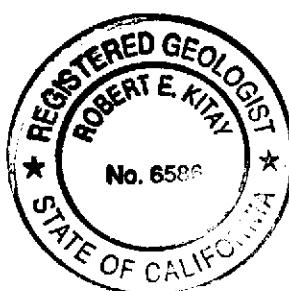

AQUA SCIENCE ENGINEERS, INC.

Well Sampling Field Log

WELL SAMPLING FIELD LOG

Project Name and Address: Linn Property
Job #: 2808 Date of sampling: 1/21/02
Well Name: MW-1 Sampled by: EP
Total depth of well (feet): 26.78 Well diameter (inches): 2
Depth to water before sampling (feet): 19.92
Thickness of floating product if any: -
Depth of well casing in water (feet): 11.86
Number of gallons per well casing volume (gallons): 19
Number of well casing volumes to be removed: 4
Req'd volume of groundwater to be purged before sampling (gallons): 26
Equipment used to purge the well: bottle
Time Evacuation Began: 1300 Time Evacuation Finished: 1400
Approximate volume of groundwater purged: 75
Did the well go dry?: No After how many gallons: -
Time samples were collected: 1405
Depth to water at time of sampling: -
Percent recovery at time of sampling: -
Samples collected with: bottle
Sample color: clear gray Odor: slight ac
Description of sediment in sample: silt

WELL SAMPLING FIELD LOG

Project Name and Address: Lim Property
Job #: 2808 Date of sampling: 1/2/02
Well Name: MW-2 Sampled by: EP
Total depth of well (feet): 26.78 Well diameter (inches): 2
Depth to water before sampling (feet): 13.55
Thickness of floating product if any: -
Depth of well casing in water (feet): 13.23
Number of gallons per well casing volume (gallons): 2.1
Number of well casing volumes to be removed: 4
Req'd volume of groundwater to be purged before sampling (gallons): 8.4
Equipment used to purge the well: bunker
Time Evacuation Began: 1230 Time Evacuation Finished: 1245
Approximate volume of groundwater purged: 8
Did the well go dry?: No After how many gallons: -
Time samples were collected: 1250
Depth to water at time of sampling: -
Percent recovery at time of sampling: -
Samples collected with: bunker
Sample color: clear/grey Odor: moderate HCl
Description of sediment in sample: silt

APPENDIX B

Certified Analytical Report
and
Chain of Custody Documentation

Report Number : 24454

Date : 1/30/2002

Eric Paddleford
Aqua Science Engineers, Inc.
208 West El Pintado Rd.
Danville, CA 94526

Subject : 3 Water Samples
Project Name : Lim Property
Project Number : 2808

Dear Mr. Paddleford,

Chemical analysis of the samples referenced above has been completed. Summaries of the data are contained on the following pages. Sample(s) were received under documented chain-of-custody. US EPA protocols for sample storage and preservation were followed.

Kiff Analytical is certified by the State of California (# 2236). If you have any questions regarding procedures or results, please call me at 530-297-4800.

Sincerely,

A handwritten signature in black ink that reads "Joel Kiff".

Joel Kiff

Report Number : 24454

Date : 1/30/2002

Subject : 3 Water Samples
Project Name : Lim Property
Project Number : 2808

Case Narrative

The Method Reporting Limit for TPH as Diesel is increased due to interference from Gasoline-Range Hydrocarbons for samples MW-2 and MW-4.
