1.0 INTRODUCTION

This report presents the methods and findings of Aqua Science Engineers, Inc. (ASE)'s semi-annual groundwater monitoring at the Lim family property located at 250 8th Street in Oakland, California (*Figures 1 and 2*). This is also the first sampling event since the 4-week dual-phase extraction soil and groundwater remediation event that took place in August and September 2009.

2.0 GROUNDWATER FLOW DIRECTION AND GRADIENT

On December 31, 2009, ASE measured the depth to water in monitoring wells MW-1 through MW-8 using an electric water level sounder. The surface of the groundwater was also checked for the presence of free-floating hydrocarbons or sheen. Monitoring well MW-3 contained a hydrocarbon sheen, which is the first time in over a decade that there was no measurable free-floating hydrocarbons in this well. Monitoring well MW-4R contained 2.30-feet of free-floating hydrocarbons, which is an increase since the previous sampling event. The product was subsequently bailed by ASE and contained in a sealed and labeled 55-gallon steel drum for temporary storage until off-site disposal can be arranged. Groundwater elevation data is presented in Table One.

A groundwater elevation (potentiometric surface) contour map is shown as Figure 2. The groundwater flow direction at the site is generally to the south with an approximate gradient of 0.005 feet/foot during this sampling period. The gradient and flow direction are generally consistent with previous findings.

3.0 MONITORING WELL SAMPLING

On December 31, 2009, ASE collected groundwater samples from seven of the eight monitoring wells for analysis. Monitoring well MW-4R was not sampled due to the presence of free-floating hydrocarbons.

Prior to sampling, the wells were purged of three well casing volumes of groundwater using disposable polyethylene bailers. The pH, temperature and conductivity of the purge water were monitored during evacuation, and samples were not collected until these parameters stabilized. Samples were collected from each well using disposable polyethylene bailers. The groundwater samples were decanted from the bottom of the bailers using low-flow emptying devices into 40-ml volatile organic analysis (VOA) vials, preserved with hydrochloric acid, sealed without headspace and labeled. All samples were stored on ice for transport to Kiff Analytical, LLC, (KIFF) of Davis, California under appropriate chain of custody documentation. Well sampling purge water was contained in a sealed and labeled 55-gallon steel drum for temporary storage until off-site disposal can be arranged. See Appendix A for copies of the well sampling field logs.

4.0 ANALYTICAL RESULTS FOR GROUNDWATER

All groundwater samples were analyzed by KIFF for total petroleum hydrocarbons as gasoline (TPH-G), benzene, toluene, ethyl benzene, total xylenes (collectively known as BTEX), fuel oxygenates including methyl tertiary butyl ether (MTBE), and lead scavengers by EPA Method 8260B, and total petroleum hydrocarbons as diesel (TPH-D) by modified EPA Method 8015. The analytical results are tabulated in Table Two, and copies of the certified analytical report and chain of custody form are included in Appendix B.

5.0 CONCLUSIONS

- TPH-G, TPH-D and diisopropyl ether (DIPE) concentrations in groundwater samples collected from monitoring well MW-1 were very similar to previous results, while BTEX, MTBE, other oxygenates and lead scavenger concentrations remained non-detectable.
- TPH-G, toluene, ethyl benzene, and total xylene concentrations decreased in groundwater samples collected from monitoring well MW-2, while benzene and DIPE concentrations increased in the same sample. No lead scavengers were detected.
- Monitoring well MW-3 was sampled for the first time in over a decade since no free-floating hydrocarbons were detected. The water sample contained 60,000 parts per billion (ppb) TPH-G, 7,500 ppb benzene, 6,500 ppb toluene, 1,000 ppb ethyl benzene, and 6,600 ppb total xylenes. No TPH-D, oxygenates or lead scavengers were detected.
- Monitoring well MW-4R contained 2.30-feet of free-floating hydrocarbons, which is an increase in free-floating hydrocarbon thickness since the previous sampling. It should be noted that MW-4 was redrilled since the previous sampling and is now a 4-inch diameter well as opposed to previous MW-4, which was a 2-inch diameter well.
- TPH-G, TPH-D and BTEX concentrations in groundwater samples collected from monitoring well MW-5 remained non-detectable this quarter, and MTBE and DIPE concentrations remained low and similar to previous results. No other oxygenates or lead scavengers were detected.
- No hydrocarbons were detected in groundwater samples collected from monitoring well MW-6.
- TPH-G, BTEX and TBA concentrations increased from the previous sampling in groundwater samples collected from monitoring well MW-7.
- No hydrocarbons were detected in groundwater samples collected from monitoring well MW-8, indicating that the contamination has not reached the deeper water-bearing zones.

Concentrations in groundwater samples collected from the following wells exceeded Environmental Screening Levels (ESLs) for drinking water as presented in the "Screening For Environmental Concerns at Sites With Contaminated Soil and Groundwater" document prepared by the California Regional Water Quality Control Board, San Francisco Bay Region dated May 2008:

- Concentrations of TPH-G, benzene, toluene, ethyl benzene, and xylenes in groundwater samples collected from monitoring wells MW-2, MW-3 and MW-7 exceeded ESLs.

Aqua Science Engineers, Inc. 55 Oak Court, Suite 220, Danville, CA 94526
 (925) 820-9391 - Fax (925) 837-4853 - www.aquascienceengineers.com

- Concentrations of TPH-G in groundwater samples collected from monitoring well MW-1 exceeded the ESLs

6.0 RECOMMENDATIONS

ASE recommends that the groundwater monitoring continue on a semi-annual sampling basis. ASE also recommends that monitoring wells MW-1, MW-5, MW-6 and MW-8 only be sampled annually. The next groundwater sampling event is scheduled for May 2010.

ASE also recommends that a remedial action plan for the installation of an ozone-sparging remediation system be prepared during the next quarter. Following the installation and start up of a groundwater remediation system, ASE will recommend that groundwater monitoring be modified to quarterly sampling for at least one year.

ASE also recommends bi-weekly bailing be initiated to removed free-floating hydrocarbons from monitoring well MW-4R.

7.0 REPORT LIMITATIONS

The results presented in this report represent conditions at the time of the groundwater sampling, at the specific locations where the samples were collected, and for the specific parameters analyzed by the laboratory. It does not fully characterize the site for contamination resulting from unknown sources, or for parameters not analyzed by the laboratory. All of the laboratory work cited in this report was prepared under the direction of an independent CAL-DHS certified laboratory. The independent laboratory is solely responsible for the contents and conclusions of the chemical analysis data.

Aqua Science Engineers appreciates the opportunity to assist The Lim Family with their environmental needs. Should you have any questions or comments, please feel free to call us at (925) 820-9391.

Respectfully submitted,

AQUA SCIENCE ENGINEERS, INC.

Robert E. Kitay, P.G., R.E.A.
 Senior Geologist

Notes:

* = Adjusted for the presence of free-floating oil by the equation: Top of Casing Elevation - Depth to Water + (0.8 x Floating Hydrocarbon Thickness) - Groundwater Elevation (Adjusted).

Top of casing elevations resurveyed by Mid Coast Engineers on 6/27/02 and 7/11/02.

ESL	100	100	1	40	30	20	5					

Notes:

- * = Hydrocarbons reported are in the early diesel range, and do not match the laboratory standards.
- ** = Hydrocarbons reported do not match the laboratory gasoline standards.
- *** = Grab sample - Not purged
- # = Estimated concentration reported due to overlapping fuel patterns.
- / = Results separated by a slash represent results from two different laboratory methods (B02G/B26G)
- na = not analyzed
- Non-detectable concentrations noted by the less than sign (<) followed by the detection limit.

Most recent data in bold.
 ESL = Environmental screening levels presented in the "Screening For Environmental Concerns at Sites With Contaminated Soil and Groundwater (May 2008)" document prepared by the California Regional Water Quality

- TPH = Total petroleum hydrocarbons
- MTBE = Methyl tertiary butyl ether
- DIPE = Diisopropyl ether
- TBA = Tertiary butanol
- Oxy = Oxygenates
- EDC = 1,2-Dichloroethane
- EDB = 1,2-Dibromoethane

APPENDIX B

Certified Analytical Report
and
Chain of Custody Documentation

David Allen
Aqua Science Engineers, Inc.
55 Oak Court, Suite 220
Danville, CA 94526

Subject : 7 Water Samples
Project Name : Lim
Project Number : 2808

Dear Mr. Allen,

Chemical analysis of the samples referenced above has been completed. Summaries of the data are contained on the following pages. Sample(s) were received under documented chain-of-custody. US EPA protocols for sample storage and preservation were followed.

Kiff Analytical is certified by the State of California (# 2236). If you have any questions regarding procedures or results, please call me at 530-297-4800.

Sincerely,

Joel Kiff

Subject : 7 Water Samples
Project Name : Lim
Project Number : 2808

Case Narrative

Matrix Spike/Matrix Spike Duplicate results associated with sample MW-7 for the analyte Benzene were affected by the analyte concentrations already present in the un-spiked sample.

JOB NO. 2808

ADDRESS 250 8th Street, Oakland, CA

ANALYSIS REQUEST

SPECIAL INSTRUCTIONS:

TPH-GAS / MTBE & BTEX
(EPA 503/8015-8020)

TPH-DIESEL w/ Silica *cut*
(EPA 3510/8015) *cleaning*

TPH-DIESEL & MOTOR OIL
(EPA 3510/8015)

CAM 17 METALS
(EPA 6010-7000)

SEM-VOLATILE ORGANICS
(EPA 625/6270)

Pb (TOTAL or DISSOLVED)
(EPA 8010)

PESTICIDES
(EPA 8081)

FUEL OXYGENATES
(EPA 8260)

PURGEABLE HALOCARBONS
(EPA 801/8010)

TPH-GIBTEX/5 OXYS / Pb
(EPA METHOD 8260) *Scrub*

MULTI-RANGE
HYDROCARBONS WITH SILICA
GEL CLEANUP (EPA 8015)

VOLATILE ORGANICS
(EPA 624/8240/8260)

LUFT METALS (5)
(EPA 6010-7000)

COMPOSITE 4:1
