RE: Former Exxon RAS #73006/720 High Street, Oakland, California.

Dear Ms. Jakub:

Attached for your review and comment is a copy of the letter report entitled *Agency Response and Work Plan for Soil Vapor Sampling*, dated July 14, 2011, for the above-referenced site. The report was prepared by Cardno ERI of Petaluma, California, and details activities at the subject site.

I declare, under penalty of perjury, that the information and/or recommendations contained in the attached document or report is true and correct to the best of my knowledge.

If you have any questions or comments, please contact me at 510.547.8196.

Sincerely,

A handwritten signature in black ink, appearing to read "J. Sedlachek".

Jennifer C. Sedlachek

SUBJECT Agency Response and Work Plan for Soil Vapor Sampling
Former Exxon Service Station 73006
720 High Street, Oakland, California

Alameda County RO#491

Ms. Sedlachek:

At the request of ExxonMobil Environmental Services (EMES), on behalf of Exxon Mobil Corporation, Cardno ERI prepared this work plan to evaluate current soil vapor conditions at the subject site and respond to comments in the Alameda County Environmental Health (ACEH) letter dated April 29, 2011 (Appendix A). Proposed work will involve the installation and sampling of four soil vapor sampling (SVS) wells (SVS1 through SVS4) and comparison of the results to published screening levels. Comments from the ACEH's letter are paraphrased below in bold, followed by Cardno ERI's response.

- 1. Off-Site Petroleum Hydrocarbons.** Previous work performed by ExxonMobil off-site indicates that petroleum hydrocarbons are present in free-product range. As discussed above, groundwater concentrations from samples collected in boring CPT2 indicate TPHg was detected at 1,060,000 parts per billion (ppb) and benzene at 1,380 ppb. ACEH approved a work plan to investigate this contamination on August 5, 2008. However, the wells have yet to be installed due to California Department of Transportation (Caltrans) restrictions for work during the

High Street project.

In 2009, East Bay Municipal Utility District was required to move a sewer line downgradient of the ExxonMobil site for the Caltrans High Street project. Petroleum hydrocarbons were encountered and the Regional Water Quality Control Board required the Ekotek Lube site at 4200 Alameda Avenue, Oakland to advance soil borings south of Highway 880 to investigate the petroleum hydrocarbons. The results from boring SB-8 revealed 46,000 ug/L TPHg and 58,000 ug/L TPHd. This boring is downgradient of the ExxonMobil site and from the free product which was detected in CPT2. The chromatogram suggests that these hydrocarbons differ from the constituents detected at the Ekotek site, indicating Ekotek is not the source. Therefore, additional investigation is needed in this area to determine the downgradient extent of the petroleum hydrocarbons originating from the ExxonMobil site. Please prepare a work plan to evaluate the extent of contamination downgradient of your site by the due date requested below.

In December 2006, Environmental Resolutions, Inc. (ERI) conducted an off-site investigation to define the extent of petroleum hydrocarbons downgradient of the site and boring CPT2. Borings CPT11 and CPT12 were advanced downgradient to the west/southwest of the site in the Caltrans right-of-way underneath the I-880 overpass. Additional borings CPT8 through CPT10 were proposed to provide a transsect of lateral delineation to the southwest, but the borings could not be completed due to the presence of multiple underground utilities.

Results of the 2006 investigation indicated that petroleum hydrocarbons are not delineated west/southwest of the site. In the 2006 assessment report, ERI recommended the installation of additional groundwater monitoring wells MW16A/B, MW17A/B, and MW19A/B through MW21A/B on the Caltrans parcel to provide lateral delineation west/southwest and south of the site; however, access to the Caltrans parcel was subsequently revoked until 2013 due to the retrofit of the High Street overpass. Proposed wells MW16A/B, MW17A/B, and MW19A/B were relocated and installed as on-site monitoring wells during an investigation in 2009. Wells MW20A/B and MW21A/B remain proposed on the Caltrans parcel and will be installed upon completion of the High Street overpass retrofit activities when access to the parcel is reinstated. Additional wells may be proposed on the parcel at a later date; however, it is premature to propose well locations prior to completing construction of the overpass structures. Cardno ERI recommends submitting a work plan for further off-site delineation when construction and the installation of wells MW20A, MW20B, MW21A, and MW22B are completed. Caltrans has indicated that the overpass construction will be complete and access negotiations can resume in 2013.

July 14, 2011
Cardno ERI 2010C.W06 Former Exxon Service Station 73006, Oakland, California

2. **Contaminant Source Area Characterization.** On-site petroleum hydrocarbons remain near the former waste-oil tank at concentrations of up to 3,100 mg/kg TPHg and 1,338 mg/kg TPHd. Groundwater concentrations remain elevated in this area (MW7) and had increased before the well was destroyed in 2000 and no remediation was performed here. Also no apparent volatile organic analysis was performed adjacent to the waste oil UST and no vapor survey has been performed at the site. Please address these aspects in the work plan requested below.

VOCs were analyzed in groundwater samples collected from well MW7 between 1987 and 1993 and results were below laboratory reporting limits with the exception of chloromethane, reported at a concentration of 2.4 µg/L in November 1990. VOCs have not been detected above laboratory reporting limits in groundwater samples collected from other wells at the site. VOCs have been adequately characterized and additional analyses are not warranted at this time.

Soil vapor sampling has not been conducted at the site. Concentrations of dissolved and residual hydrocarbons at the site indicate that SVS is warranted. A work plan for SVS is provided in the following section.

3. **Groundwater Contaminant Plume Monitoring.** Please reduce groundwater monitoring to semi-annual for all site wells and report on a semi-annual basis.

Monitoring and sampling of site wells will be conducted semi-annually during second and fourth quarters.

WORK PLAN FOR SOIL VAPOR SAMPLING

Soil Vapor Survey and Risk Evaluation

To evaluate concentrations of fuel hydrocarbons and related constituents in soil vapor underlying the site and the potential vapor intrusion pathway, Cardno ERI proposes to install four SVS wells (SVS1 through SVS4) (Plate 1). Groundwater monitoring data indicate that groundwater beneath the site in the area of the station building is encountered at approximately 4 to 7 feet bgs. The SVS wells will be screened above static groundwater at approximately 4 feet bgs. The proposed locations of the SVS wells were selected to assess the soil vapor conditions near the commercial building and in areas of maximum reported residual hydrocarbon concentrations (Tables 1A, 1B, 2A, and 2B; Appendix B). Work will be performed in accordance with Cardno ERI's field protocol (Appendix C).

July 14, 2011
Cardno ERI 2010C.W06 Former Exxon Service Station 73006, Oakland, California

Cardno ERI will conduct the soil vapor survey in accordance with protocol presented in the following guidance documentation:

- *Guidance for the Evaluation and Mitigation of Subsurface Vapor Intrusion to Indoor Air* (Interim Final), published by the Department of Toxic Substances Control of the California Environmental Protection Agency (December 15, 2004, revised February 7, 2005) (DTSC, 2005).
- *Advisory – Active Soil Gas Investigations*, jointly issued by the Department of Toxic Substances Control of the California Environmental Protection Agency and the California Regional Water Quality Control Board, Los Angeles Region (CRWQCB-LA, 2003).
- *Collecting and Interpreting Soil Gas-Samples from the Vadose Zone, A Practical Strategy for Assessing the Subsurface Vapor-to-Indoor Air Migration Pathway of Petroleum Hydrocarbon Sites*, American Petroleum Institute Publication Number 4741 (November 2005) (API, 2005).
- *Advisory – Active Soil Gas Investigation* (Draft), published by the Department of Toxic Substances Control of the California Environmental Protection Agency (March 3, 2010) (DTSC, 2010).
- *Screening for Environmental Concerns at Sites with Contaminated Soil and Groundwater*, published by the California Regional Water Quality Control Board, San Francisco Bay Region (revised May 2008) (CRWQCB-SFB, 2008).

The SVS borings will be advanced to approximately 4 feet bgs using hand and/or vacuum excavation tools. Soil samples will be collected from each SVS well location at approximately 1-foot intervals and select soil samples will be preserved for laboratory analysis. An SVS well will be constructed in each boring with screens placed at approximately 4 feet bgs (Plate 2).

At least 48 hours after well installation, a purge volume test will be conducted on well SVS4 to evaluate the appropriate purge volume for sample collection. Following the purge volume test, the wells will be sampled. A schematic drawing showing the SVS manifold and associated equipment is presented on Plate 3.

Cardno ERI will evaluate the potential human health risk posed by soil vapor intrusion from underlying sources. ERI will compare the concentrations of vapor-phase petroleum hydrocarbons reported in soil vapor samples from the wells to published screening levels. If warranted, site-specific risk will be further evaluated using building-specific construction parameters and attenuation factors.

July 14, 2011
Cardno ERI 2010C.W06 Former Exxon Service Station 73006, Oakland, California

Laboratory Analyses

Select soil samples from SVS well installation activities will be submitted for analysis to a California state-certified analytical laboratory. Samples will be analyzed for TPHd and TPHg using EPA Method 8015B and BTEX, MTBE, DIPE, ETBE, TAME, TBA, 1,2-DCA, EDB, and ethanol using EPA Method 8260B.

Soil vapor samples will be analyzed for full-scan VOCs, including BTEX, lead scavengers (including 1,2-DCA), and naphthalene using EPA Method TO-15; TPHg using EPA Method TO-3 or TO15; and oxygen, carbon dioxide, helium, and methane using ASTM Method 1946.

Waste Management Plan

Soil and rinsate water generated during field activities will be temporarily stored on site in DOT-approved, 55-gallon drums. Soil cuttings will be transported to TPST Soil Recyclers of California's approved facility in Adelanto, California, for recycling. Rinsate water will be transported to InStrat Inc., of Rio Vista, California, for disposal. Waste disposal documentation for soil and water will be included in the report.

Survey

The proposed SVS wells will be surveyed in accordance with Assembly Bill (AB) 2886.

Report

After completion of the proposed field activities, a report summarizing field and laboratory procedures, boring logs, laboratory results, conclusions, and recommendations will be submitted to EMES and the ACEH. The report will be signed by a State of California professional geologist.

CONTACT INFORMATION

The responsible party contact is Ms. Jennifer C. Sedlachek, ExxonMobil Environmental Services, 4096 Piedmont Avenue #194, Oakland, California, 94611. The consultant contact is Ms. Paula Sime, Cardno ERI, 601 North McDowell Boulevard, Petaluma, California, 94954. The agency contact is Ms. Barbara Jakub, Alameda County Health Care Services Agency, Environmental Health Department, 1131 Harbor Bay Parkway, Suite 250, Alameda, California 94502-6577.

LIMITATIONS

For any documents cited that were not generated by Cardno ERI, the data taken from those documents is used "as is" and is assumed to be accurate. Cardno ERI does not guarantee the accuracy of this data and makes no warranties for the referenced work performed nor the inferences or conclusions stated in these reports.

This document was prepared in accordance with generally accepted standards of environmental, geological, and engineering practices in California at the time of investigation. No soil engineering or geotechnical references are implied or should be inferred. The evaluation of the geologic conditions at the site for this investigation is made from a limited number of data points. Subsurface conditions may vary away from these data points.

Please call Ms. Paula Sime, Cardno ERI's project manager for this site, at (707) 766-2000 with any questions regarding this submittal.

Sincerely,

Paula Sime

TABLE 1A
CUMULATIVE GROUNDWATER MONITORING AND SAMPLING DATA
Former Exxon Service Station 73006
720 High Street
Oakland, California

Notes:

TOC	= Top of well casing elevation; datum is mean sea level.
DTW	= Depth to water.
GW Elev.	= Groundwater elevation; datum is mean sea level. If liquid-phase hydrocarbons present, elevation adjusted using TOC - [DTW - (PT x 0.8)].
NAPL	= Non-aqueous phase liquid.
[]	= Amount recovered in cups.
TPHd	= Total petroleum hydrocarbons as diesel analyzed using EPA Method 3510/8015 (modified).
TPHg	= Total petroleum hydrocarbons as gasoline analyzed using EPA Method 5030/8015 (modified).
MTBE 8021B	= Methyl tertiary butyl ether analyzed using EPA Method 8021B.
MTBE 8260B	= Methyl tertiary butyl ether analyzed using EPA Method 8260B.
BTEX	= Benzene, toluene, ethylbenzene, and total xylenes analyzed using EPA Method 8021B.
TOG	= Total oil and grease analyzed using Standard Method 5520.
EHCss	= Extractable hydrocarbons as Stoddard Solvent analyzed using EPA Method 8015.
EDB	= 1,2-dibromoethane analyzed using EPA Method 8260B.
1,2-DCA	= 1,2-dichloroethane analyzed using EPA Method 8260B.
TAME	= Tertiary amyl methyl ether analyzed using EPA Method 8260B.
TBA	= Tertiary butyl alcohol analyzed using EPA Method 8260B.
ETBE	= Ethyl tertiary butyl ether analyzed using EPA Method 8260B.
DIPE	= Di-isopropyl ether analyzed using EPA Method 8260B.
Ethanol	= Ethanol analyzed using EPA Method 8260B.
µg/L	= Micrograms per liter.
ND	= Not detected at or above laboratory reporting limits.
---	= Not measured/Not sampled/Not analyzed.
<	= Less than the stated laboratory reporting limit.
a	= A peak eluting earlier than benzene, suspected to be MTBE, was present.
b	= Sample containers broken in transit.
c	= Chromatogram pattern: unidentified hydrocarbons C6 - C12.
d	= Chromatogram pattern: weathered gasoline C6 - C12.
e	= Chromatogram pattern: weathered diesel C9 - C24 and unidentified hydrocarbons C9 - C36.
f	= Chromatogram pattern: unidentified hydrocarbons C9 - C24.
g	= Hydrocarbon pattern is not consistent with that of the specified standard.
h	= Analysis run. Results not available.
i	= TPHd note: Analyst notes samples resemble paint thinner more than Stoddard Solvent.
j	= Analyte detected in trip blank, method blank, and/or bailer blank; result is suspect.
k	= Higher reported TPH concentrations in groundwater may be due to different laboratory quantitation procedures.
l	= Elevated result due to single analyte peak in quantitation range.
m	= Surrogate recovery above control limits; this may result in a high bias.
n	= Laboratory QA/QC issue(s); ERI considers the result to be usable. Please refer to laboratory report for details.

TABLE 1A
CUMULATIVE GROUNDWATER MONITORING AND SAMPLING DATA
Former Exxon Service Station 73006
720 High Street
Oakland, California

Notes (Cont.):

- o** = Analyzed using EPA Method 624 (volatile organic compounds).
- p** = Analyzed for Stoddard Solvent using EPA Method 5030/8015.
- q** = Analyzed for Stoddard Solvent using modified EPA Method 5030/8015. Sample chromatogram was not representative of a Stoddard Solvent pattern. Pattern was representative of the heavier hydrocarbons found in a gasoline pattern.
- r** = Stoddard Solution detected in the sample at approximately 320 parts per billion (ppb).
- s** = Chloromethane.
- t** = Analyte presence was not confirmed by second column or GC/MS analysis.

TABLE 1B
ADDITIONAL CUMULATIVE GROUNDWATER MONITORING AND SAMPLING DATA
Former Exxon Service Station 73006
720 High Street
Oakland, California

Notes:	
TOC	= Top of well casing elevation; datum is mean sea level.
DTW	= Depth to water.
GW Elev.	= Groundwater elevation; datum is mean sea level. If liquid-phase hydrocarbons present, elevation adjusted using TOC - [DTW - (PT x 0.8)].
NAPL	= Non-aqueous phase liquid.
[]	= Amount recovered in cups.
TPHd	= Total petroleum hydrocarbons as diesel analyzed using EPA Method 3510/8015 (modified).
TPHg	= Total petroleum hydrocarbons as gasoline analyzed using EPA Method 5030/8015 (modified).
MTBE 8021B	= Methyl tertiary butyl ether analyzed using EPA Method 8021B.
MTBE 8260B	= Methyl tertiary butyl ether analyzed using EPA Method 8260B.
BTEX	= Benzene, toluene, ethylbenzene, and total xylenes analyzed using EPA Method 8021B.
TOG	= Total oil and grease analyzed using Standard Method 5520.
EHCss	= Extractable hydrocarbons as Stoddard Solvent analyzed using EPA Method 8015.
EDB	= 1,2-dibromoethane analyzed using EPA Method 8260B.
1,2-DCA	= 1,2-dichloroethane analyzed using EPA Method 8260B.
TAME	= Tertiary amyl methyl ether analyzed using EPA Method 8260B.
TBA	= Tertiary butyl alcohol analyzed using EPA Method 8260B.
ETBE	= Ethyl tertiary butyl ether analyzed using EPA Method 8260B.
DIPE	= Di-isopropyl ether analyzed using EPA Method 8260B.
Ethanol	= Ethanol analyzed using EPA Method 8260B.
µg/L	= Micrograms per liter.
ND	= Not detected at or above laboratory reporting limits.
--	= Not measured/Not sampled/Not analyzed.
<	= Less than the stated laboratory reporting limit.
a	= A peak eluting earlier than benzene, suspected to be MTBE, was present.
b	= Sample containers broken in transit.
c	= Chromatogram pattern: unidentified hydrocarbons C6 - C12.
d	= Chromatogram pattern: weathered gasoline C6 - C12.
e	= Chromatogram pattern: weathered diesel C9 - C24 and unidentified hydrocarbons C9 - C36.
f	= Chromatogram pattern: unidentified hydrocarbons C9 - C24.
g	= Hydrocarbon pattern is not consistent with that of the specified standard.
h	= Analysis run. Results not available.
i	= TPHd note: Analyst notes samples resemble paint thinner more than Stoddard Solvent.
j	= Analyte detected in trip blank, method blank, and/or bailer blank; result is suspect.
k	= Higher reported TPH concentrations in groundwater may be due to different laboratory quantitation procedures.
l	= Elevated result due to single analyte peak in quantitation range.
m	= Surrogate recovery above control limits; this may result in a high bias.
n	= Laboratory QA/QC issue(s); ERI considers the result to be usable. Please refer to laboratory report for details.

TABLE 1B
ADDITIONAL CUMULATIVE GROUNDWATER MONITORING AND SAMPLING DATA
Former Exxon Service Station 73006
720 High Street
Oakland, California

Notes (Cont.):

- o** = Analyzed using EPA Method 624 (volatile organic compounds).
- p** = Analyzed for Stoddard Solvent using EPA Method 5030/8015.
- q** = Analyzed for Stoddard Solvent using modified EPA Method 5030/8015. Sample chromatogram was not representative of a Stoddard Solvent pattern.
Pattern was representative of the heavier hydrocarbons found in a gasoline pattern.
- r** = Stoddard Solution detected in the sample at approximately 320 parts per billion (ppb).
- s** = Chloromethane.
- t** = Analyte presence was not confirmed by second column or GC/MS analysis.

TABLE 2A
CUMULATIVE SOIL ANALYTICAL RESULTS
Former Exxon Service Station 73006
720 High Street
Oakland, California

Notes:

S-2-CPT1	= Soil - Sample Depth - Sample Location.
TPHd	= Total petroleum hydrocarbons as diesel analyzed using EPA Method 8015B.
TPHg	= Total petroleum hydrocarbons as gasoline analyzed using EPA Method 8015B.
MTBE	= Methyl tertiary butyl ether analyzed using EPA Method 8260B.
BTEX	= Benzene, toluene, ethylbenzene, and total xylenes analyzed using EPA Method 8021B.
ETBE	= Ethyl tertiary butyl ether analyzed using EPA Method 8260B.
TAME	= Tertiary amyl methyl ether analyzed using EPA Method 8260B.
TBA	= Tertiary butyl alcohol analyzed using EPA Method 8260B.
1,2-DCA	= 1,2-dichloroethane analyzed using EPA Method 8260B.
EDB	= 1,2-dibromoethane analyzed using EPA Method 8260B.
DIPE	= Di-isopropyl ether analyzed using EPA Method 8260B.
Ethanol	= Ethanol analyzed using EPA Method 8260B.
Lead	= Lead analyzed using EPA Method 6010B.
feet bgs	= Feet below ground surface.
mg/kg	= Milligrams per kilogram.
<	= Less than the stated reporting limit.
a	= Result is not consistent with specified fuel.
b	= Hydrocarbons greater than C22 were detected, and 460 mg/kg of Oil and Grease analyzed using SM5520 were detected.
c	= Data missing from historical files.

Subject: Work Plan Request for Fuel Leak Case No. RO0000491 and GeoTracker Global ID T0600100552, EXXON #7-3006, 720 High Street, Oakland, CA 94601

Dear Ms. Sedlachek and Messrs. Mashoon and Chu:

Thank you for the recently submitted document entitled *Site Assessment Report* dated October 19, 2009, which was prepared by Environmental Resolutions Inc., for the subject site. Alameda County Environmental Health (ACEH) staff has reviewed the case file including the above-mentioned report and has determined that additional work is needed to define the off-site extent of contamination.

Work to date has consisted of on-site investigation and remediation of floating product at the site. Remediation consisted of operation of an on-site air-sparge system from 1996 to 1999 and a biosparge system from 2001 to 2003. Confirmation borings were advanced in 2005. Off-site boring (CPT-2) had a detection of 1,060,000 micrograms per liter ($\mu\text{g}/\text{L}$) total petroleum hydrocarbons as gasoline (TPHg) and over 1,380 $\mu\text{g}/\text{L}$ benzene in groundwater at 10 feet below ground surface (bgs). The investigation shows that although on-site remediation has been performed, significant off-site contamination is present and its extent is undefined. Additionally, sampling at the downgradient Ekotek site in 2010 detected hydrocarbons at concentrations of 46,000 $\mu\text{g}/\text{L}$ TPHg and 58,000 $\mu\text{g}/\text{L}$ TPPh that potentially originate from your site. Therefore, an investigation as to the off-site extent of petroleum hydrocarbons is needed.

ACEH requests that you address the following technical comments and send us the report requested below.

TECHNICAL COMMENTS

1. **Off-Site Petroleum Hydrocarbons** – Previous work performed by Exxon-Mobil off-site indicates that petroleum hydrocarbons are present in free-product range. As discussed above, groundwater concentrations from samples collected in boring CPT-2 indicate TPHg was detected at 1,060,000 parts per billion (ppb) and benzene at 1,380 ppb. ACEH approved a work plan to investigate this contamination on August 5, 2008. However, the wells have yet to be installed due to Caltrans restrictions for work during the High Street project.

In 2009, East Bay Municipal Utility District was required to move a sewer line downgradient of the Exxon/Mobil site for the Caltrans High Street project. Petroleum hydrocarbons were encountered and the Regional Water Quality Control Board required the Ekotek Lube site at 4200 Alameda Avenue, Oakland, CA to advance soil borings south of Highway 880 to investigate the petroleum hydrocarbons. The results from boring SB-8 revealed 46,000 µg/L TPHg and 58,000 µg/L TPHd. This boring is downgradient of the Exxon/Mobil site and from the free product which was detected in CPT-2. The chromatogram suggests that these hydrocarbons differ from the constituents detected at the Ekotek site, indicating Ekotek is not the source. Therefore, additional investigation is needed in this area to determine the downgradient extent of the petroleum hydrocarbons originating from the Exxon/Mobil site. Please prepare a work plan to evaluate the extent of contamination downgradient of your site by the due date requested below.

2. **Contaminant Source Area Characterization** – On-site petroleum hydrocarbons remain near the former waste-oil tank at concentrations of up to 3,100 mg/kg TPHg and 1,338 mg/kg TPHd. Groundwater concentrations remain elevated in this area (MW-7) and had increased before the well was destroyed in 2000 and no remediation was performed here. Also no apparent volatile organic analysis was performed adjacent to the waste oil UST and no vapor survey has been performed at the site. Please address these aspects in the work plan requested below.
3. **Groundwater Contaminant Plume Monitoring** – Please reduce groundwater monitoring to semi-annual for all site wells and report on a semi-annual basis.

TECHNICAL REPORT REQUEST

Please submit technical reports to ACEH (Attention: Barbara Jakub), according to the following schedule:

- **July 15, 2011** – Soil and Water Investigation Work Plan
- **July 31, 2011** – Semi-annual Monitoring Report (2nd Quarter 2011)
- **December 30, 2011** – Semi-annual Monitoring Report (4th Quarter 2012)

Ms. Sedlachek and Messrs. Mashoon and Chu:

Responsible Party(ies) Legal Requirements/Obligations

REPORT REQUESTS

These reports are being requested pursuant to California Health and Safety Code Section 25296.10. 23 CCR Sections 2652 through 2654, and 2721 through 2728 outline the responsibilities of a responsible party in response to an unauthorized release from a petroleum UST system, and require your compliance with this request.

ELECTRONIC SUBMITTAL OF REPORTS

ACEH's Environmental Cleanup Oversight Programs (LOP and SLIC) require submission of reports in electronic form. The electronic copy replaces paper copies and is expected to be used for all public information requests, regulatory review, and compliance/enforcement activities. Instructions for submission of electronic documents to the Alameda County Environmental Cleanup Oversight Program FTP site are provided on the attached "Electronic Report Upload Instructions." Submission of reports to the Alameda County FTP site is an addition to existing requirements for electronic submittal of information to the State Water Resources Control Board (SWRCB) GeoTracker website. In September 2004, the SWRCB adopted regulations that require electronic submittal of information for all groundwater cleanup programs. For several years, responsible parties for cleanup of leaks from underground storage tanks (USTs) have been required to submit groundwater analytical data, surveyed locations of monitoring wells, and other data to the GeoTracker database over the Internet. Beginning July 1, 2005, these same reporting requirements were added to Spills, Leaks, Investigations, and Cleanup (SLIC) sites. Beginning July 1, 2005, electronic submittal of a complete copy of all reports for all sites is required in GeoTracker (in PDF format). Please visit the SWRCB website for more information on these requirements (http://www.waterboards.ca.gov/water_issues/programs/ust/electronic_submittal/).

PERJURY STATEMENT

All work plans, technical reports, or technical documents submitted to ACEH must be accompanied by a cover letter from the responsible party that states, at a minimum, the following: "I declare, under penalty of perjury, that the information and/or recommendations contained in the attached document or report is true and correct to the best of my knowledge." This letter must be signed by an officer or legally authorized representative of your company. Please include a cover letter satisfying these requirements with all future reports and technical documents submitted for this fuel leak case.

PROFESSIONAL CERTIFICATION & CONCLUSIONS/RECOMMENDATIONS

The California Business and Professions Code (Sections 6735, 6835, and 7835.1) requires that work plans and technical or implementation reports containing geologic or engineering evaluations and/or judgments be performed under the direction of an appropriately registered or certified professional. For your submittal to be considered a valid technical report, you are to present site specific data, data interpretations, and recommendations prepared by an appropriately licensed professional and include the professional registration stamp, signature, and statement of professional certification. Please ensure all that all technical reports submitted for this fuel leak case meet this requirement.

UNDERGROUND STORAGE TANK CLEANUP FUND

Please note that delays in investigation, later reports, or enforcement actions may result in your becoming ineligible to receive grant money from the state's Underground Storage Tank Cleanup Fund (Senate Bill 2004) to reimburse you for the cost of cleanup.

AGENCY OVERSIGHT

If it appears as though significant delays are occurring or reports are not submitted as requested, we will consider referring your case to the Regional Board or other appropriate agency, including the County District Attorney, for possible enforcement actions. California Health and Safety Code, Section 25299.76 authorizes enforcement including administrative action or monetary penalties of up to \$10,000 per day for each day of violation.

Alameda County Environmental Cleanup Oversight Programs (LOP and SLIC)	REVISION DATE: July 20, 2010 ISSUE DATE: July 5, 2005 PREVIOUS REVISIONS: October 31, 2005; December 16, 2005; March 27, 2009; July 8, 2010
SECTION: Miscellaneous Administrative Topics & Procedures	SUBJECT: Electronic Report Upload (ftp) Instructions

The Alameda County Environmental Cleanup Oversight Programs (LOP and SLIC) require submission of all reports in electronic form to the county's ftp site. Paper copies of reports will no longer be accepted. The electronic copy replaces the paper copy and will be used for all public information requests, regulatory review, and compliance/enforcement activities.

REQUIREMENTS

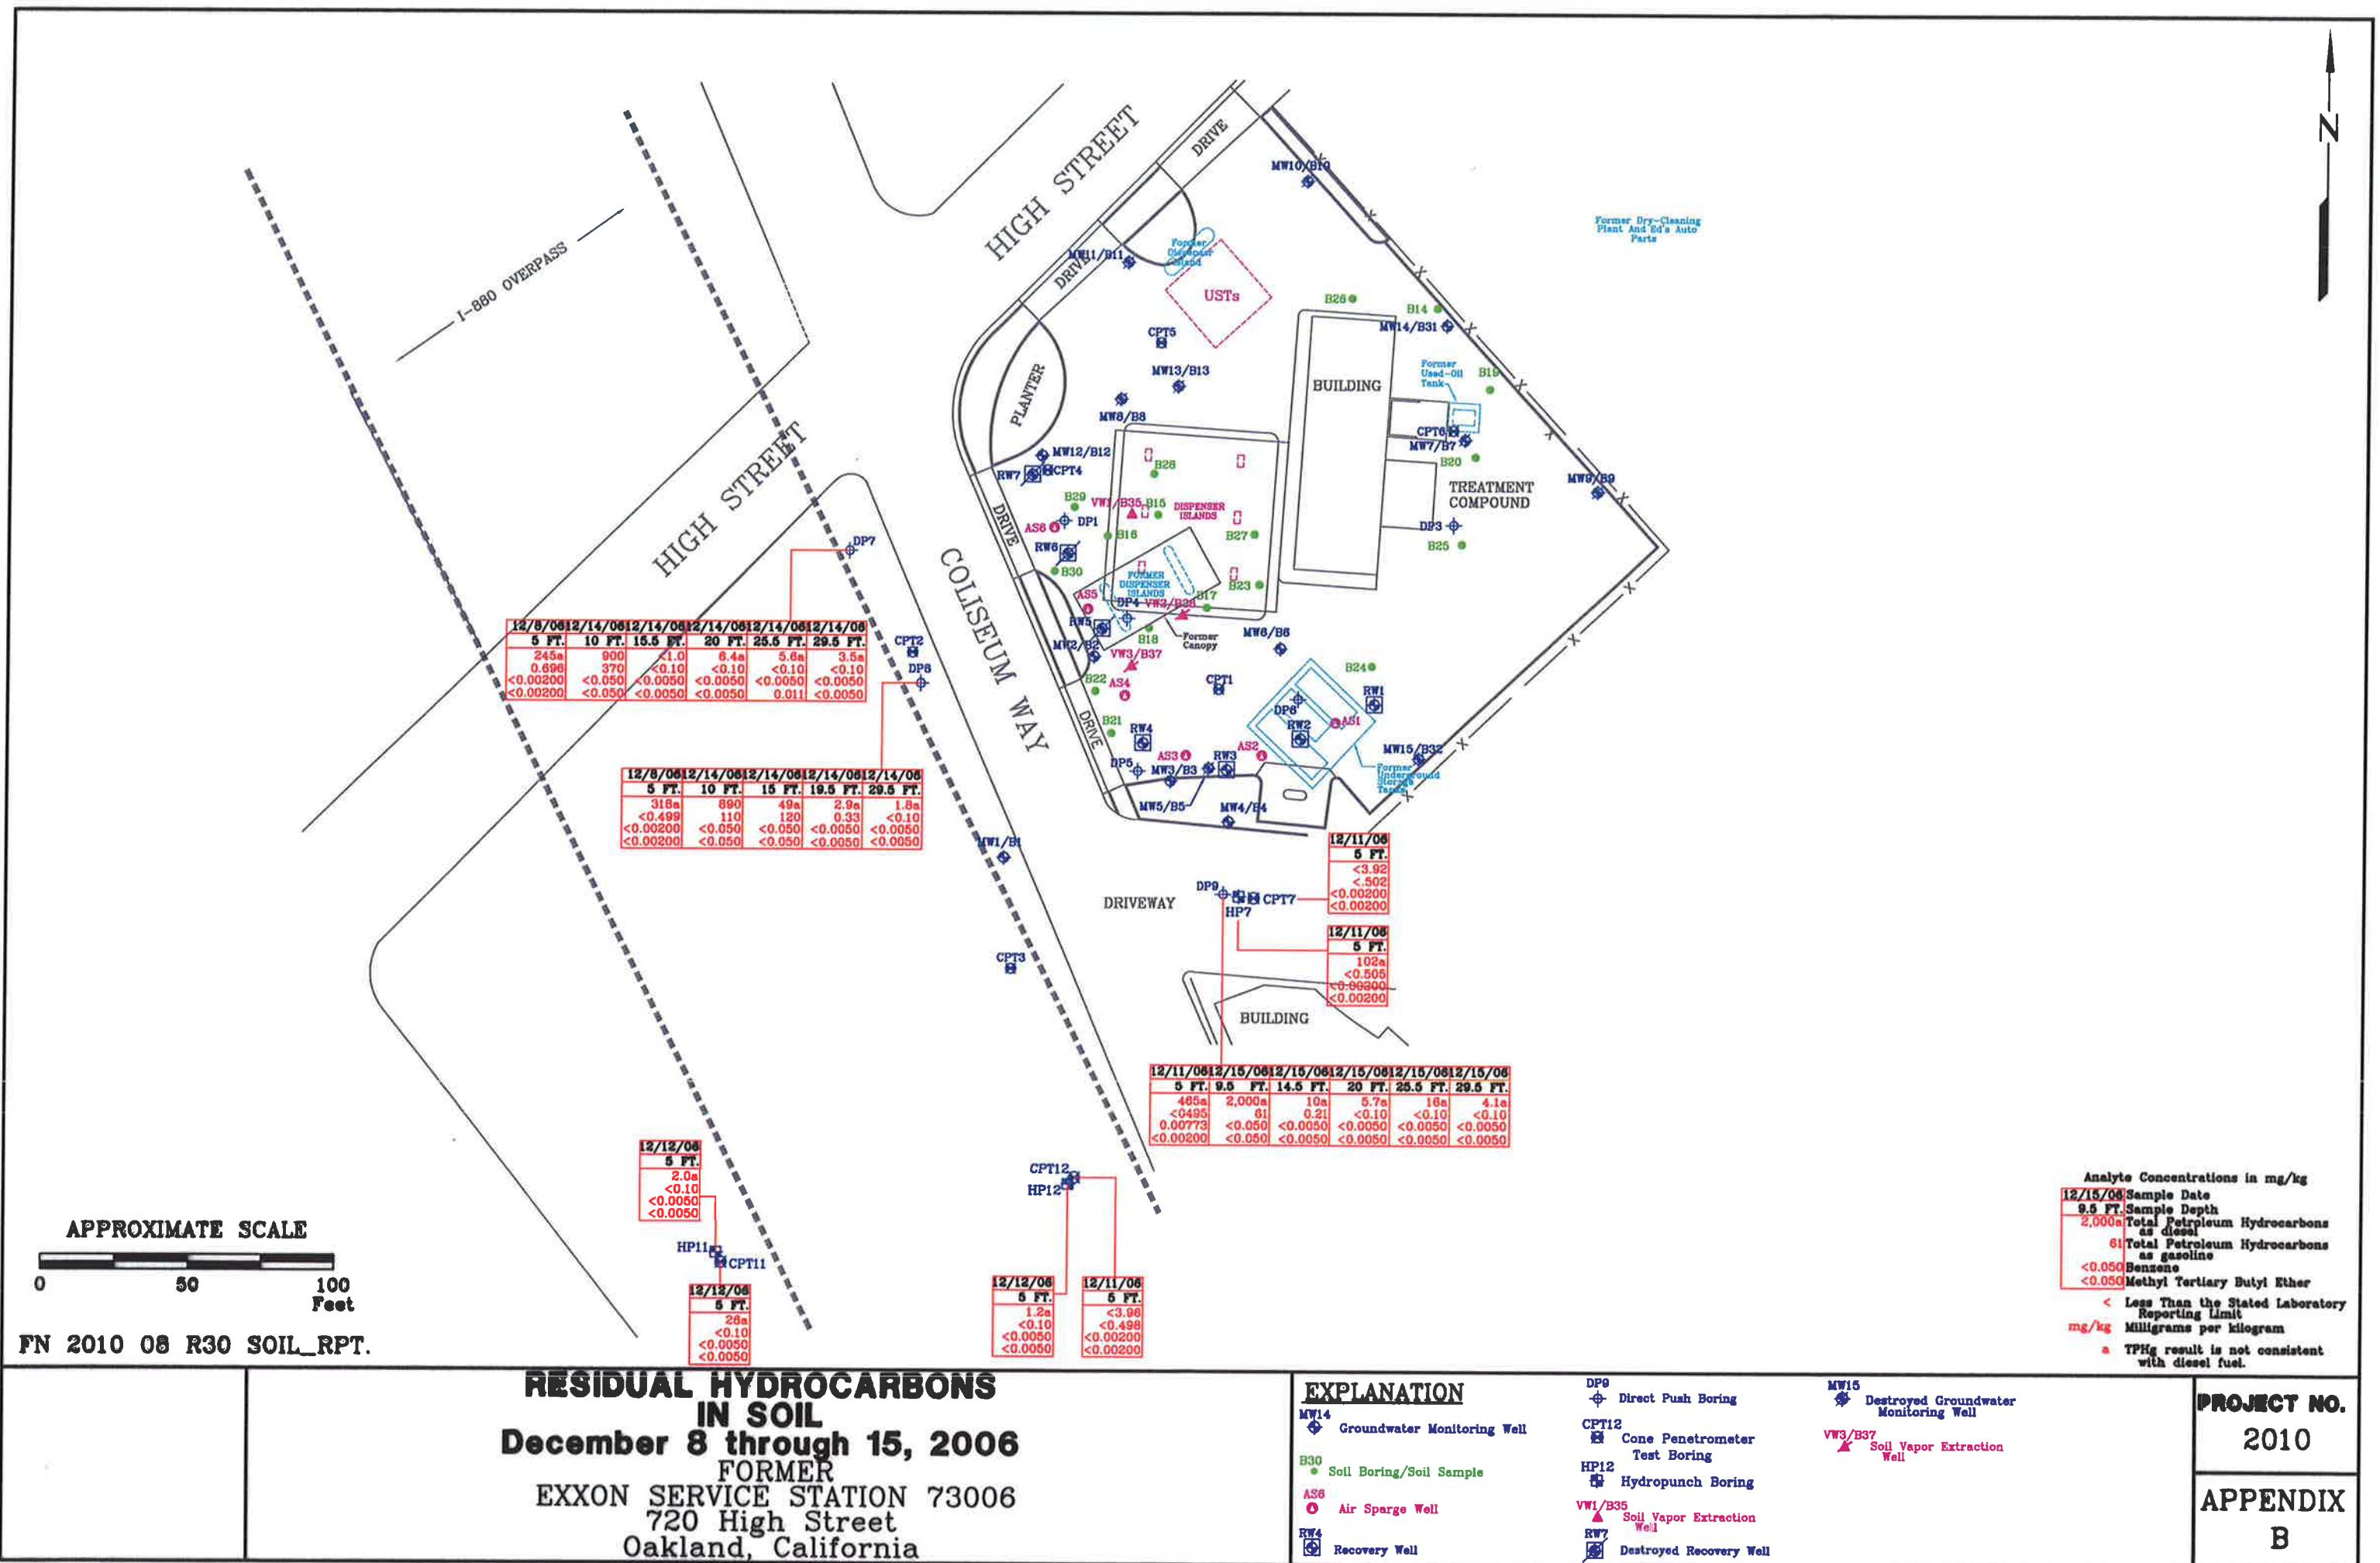

- Please **do not** submit reports as attachments to electronic mail.
- Entire report including cover letter must be submitted to the ftp site as a **single portable document format (PDF) with no password protection**.
- It is **preferable** that reports be converted to PDF format from their original format, (e.g., Microsoft Word) rather than scanned.
- **Signature pages and perjury statements must be included and have either original or electronic signature.**
- **Do not password protect the document.** Once indexed and inserted into the correct electronic case file, the document will be secured in compliance with the County's current security standards and a password. **Documents with password protection will not be accepted.**
- Each page in the PDF document should be rotated in the direction that will make it easiest to read on a computer monitor.
- Reports must be named and saved using the following naming convention:
RO#_Report Name_Year-Month-Date (e.g., RO#5555_WorkPlan_2005-06-14)

Submission Instructions

- 1) Obtain User Name and Password:
 - a) Contact the Alameda County Environmental Health Department to obtain a User Name and Password to upload files to the ftp site.
 - i) Send an e-mail to deh.loptoxic@acgov.org
 - b) In the subject line of your request, be sure to include "ftp **PASSWORD REQUEST**" and in the body of your request, include the **Contact Information, Site Addresses, and the Case Numbers (RO# available in Geotracker) you will be posting for.**
- 2) Upload Files to the ftp Site
 - a) Using Internet Explorer (IE4+), go to <ftp://alcoftp1.acgov.org>
 - (i) Note: Netscape, Safari, and Firefox browsers will not open the FTP site.
 - b) Click on Page located on the Command bar on upper right side of window, and then scroll down to Open FTP Site in Windows Explorer.
 - c) Enter your User Name and Password. (Note: Both are Case Sensitive.)
 - d) Open "My Computer" on your computer and navigate to the file(s) you wish to upload to the ftp site.
 - e) With both "My Computer" and the ftp site open in separate windows, drag and drop the file(s) from "My Computer" to the ftp window.
- 3) Send E-mail Notifications to the Environmental Cleanup Oversight Programs
 - a) Send email to deh.loptoxic@acgov.org notify us that you have placed a report on our ftp site.
 - b) Copy your Caseworker on the e-mail. Your Caseworker's e-mail address is the entire first name then a period and entire last name @acgov.org. (e.g., firstname.lastname@acgov.org)
 - c) The subject line of the e-mail must start with the RO# followed by **Report Upload**. (e.g., Subject: RO1234 Report Upload) If site is a new case without an RO#, use the street address instead.
 - d) If your document meets the above requirements and you follow the submission instructions, you will receive a notification by email indicating that your document was successfully uploaded to the ftp site.

FIELD PROTOCOL

Cardno ERI
Soil Vapor Sampling Well Installation and Sampling Field Protocol

Preliminary Activities

Prior to the onset of field activities at the site, Cardno ERI obtains the appropriate permit(s) from the governing agency(s). Advance notification is made as required by the agency(s) prior to the start of work. Cardno ERI marks the borehole locations and contacts the local one call utility locating service at least 48 hours prior to the start of work to mark buried utilities. Borehole locations may also be checked for buried utilities by a private geophysical surveyor. Prior to drilling, the borehole location is cleared in accordance with the client's procedures. Fieldwork is conducted under the advisement of a registered professional geologist and in accordance with an updated site-specific safety plan prepared for the project, which is available at the job site during field activities.

Well Construction

The borehole is advanced to the desired depth using either a direct-push rig, hand auger, or air vacuum rig. Lithologic conditions are recorded on a boring log during borehole advancement, and select soil matrix sampling may be conducted based on soil characteristics.

Each soil vapor sampling (SVS) well is constructed using inert screen material attached to $\frac{1}{8}$ - to $\frac{1}{4}$ -inch outer diameter inert tubing. A gas-tight vacuum fitting or valve is attached to the top of each length of tubing using a female compression fitting. Each screen is set within a minimum of a 12-inch thick appropriately sized sand pack, with a minimum of 3 inches of sand pack above the top of the screen. A minimum of 4 inches of dry granular bentonite is set above each screen and associated sand pack. In SVS wells with multiple and separate casings and screens, the annular space between the top of the dry granular bentonite above the deep screen and the bottom of the sand pack associated with the shallow screen is sealed with a minimum of 18 inches of hydrated bentonite. The remainder of the annular space of the well is sealed with hydrated bentonite to 1 foot below ground surface. Wellheads are finished with traffic-rated well boxes set in concrete flush with the surrounding grade. No glues, chemical cements, or solvents are used in well construction.

A boring log is completed with the construction details for each well, including the materials of construction, depth of the borehole, screen length, and annular seal thickness.

Soil Vapor Sampling

Samples are collected using a soil vapor purging and sampling manifold consisting of a flow regulator, vacuum gauges, vacuum pump, shroud, and laboratory-prepared, gas-tight, opaque containers such as Summa™ canisters. Samples may also be collected using a syringe and analyzed by a mobile laboratory. Prior to use, Summa™ canisters are checked to ensure they are under the laboratory induced vacuum between 31 and 25 inches of mercury (in. Hg).

New inert tubing is used to purge and sample each well. Prior to purging and sampling each SVS well, the sampling manifold is connected to the gas-tight vacuum fitting or valve at the wellhead, and the downstream tubing and fittings are vacuum tested at approximately 24 to 28 in. Hg. Purging and sampling are conducted only on SVS wells when the tubing and fittings hold the applied vacuum for 5 minutes per vacuum gauge reading.

When required, Cardno ERI conducts a purge volume versus constituent concentration test on at least one SVS well prior to purging and sampling activities. The purge volume test well is selected based on the location of the anticipated source of chemical constituents at the site and on the location of anticipated maximum soil vapor concentrations based on lithologic conditions. If the SVS well has been in place for more than 1 week, it is assumed that soil vapor in the sand pack has equilibrated with the surrounding soil, and only the screen and tubing volumes are included in the purge volume calculation. If the SVS well has been in place for less than 1 week, the volume of the sand pack around the screen is included in the purge volume calculation. A photo-ionization detector (PID) or on-site mobile laboratory is used to evaluate concentrations of chemical constituents in the vapor stream after 1, 3, and 10 volumes of vapor have been purged from the SVS well. Purging is conducted at a rate of 100 to 200 milliliters per minute (ml/min). The purge volume exhibiting the highest concentration is the volume of vapor purged from each SVS well prior to sampling. If the three separate purge volumes produce equal concentrations a default of 3 purge volumes is extracted prior to sampling.

Prior to sampling, a helium leak test is performed at each SVS well, including a summa canister and its fittings, to check for leaks in the SVS annulus. To assess the potential for leaks in the SVS well annulus, a shroud is placed over the SVS well and summa canister and the shroud is filled with a measured amount of helium. Helium screening is performed in the field by drawing soil gas into a Tedlar bag via a lung-box and screening the contents of the Tedlar bag with a helium meter. The concentration of helium in the sample divided by the concentration of helium in the shroud provides a measure of the proportion of the sample attributable to leakage. A leak that comprises less than 5% of the sample is insignificant. Helium screening is also performed using laboratory analysis of the contents of the summa canister collected under the shroud. Sampling is conducted at approximately the same rate of purging, at 100 to 200 ml/min. Soil vapor samples are submitted under chain-of-custody protocol for the specified laboratory analyses.

At a minimum, weather conditions (temperature, barometric pressure and precipitation), the sampling flow rate, the purge volume, the helium leak detection percentage results, the sample canister identification number, the method of sample collection, and the vacuum of the sampling canister at the start and end of sample collection (if applicable) are recorded on a log for each SVS well purged and sampled.

Decontamination Procedures

If soil samples are collected, Cardno ERI or the contracted driller decontaminates the soil sampling equipment between each sampling interval using a non-phosphate solution, followed by a minimum of two tap water rinses.

De-ionized water may be used for the final rinse. Downhole drilling equipment is steam-cleaned or triple-rinsed prior to advancing each borehole.

Waste Treatment and Disposal

Soil cuttings generated from the well installation are stored on site in labeled, Department of Transportation-approved, 55-gallon drums or other appropriate storage container. The soil is removed from the site and transported under manifest to a client- and regulatory-approved facility for recycling or disposal. Decontamination water is stored on site in labeled, regulatory-approved storage containers, and is subsequently transported under manifest to a client- and regulatory-approved facility for disposal or treated with a permitted mobile or fixed-base carbon treatment system.
