Oakland, California 94621

Subject: Former Exxon RAS #7-3006; 720 High Street, Oakland, California

Dear Mr. Seto:

Attached for your review and comment is the Letter Report Quarterly Groundwater Monitoring for the above referenced site. This report, prepared by RESNA Industries, Inc., of San Jose, California, details the results of the second quarter ground water monitoring events.

Exxon will be installing an interim floating product recovery system to remove floating product from monitoring wells MW-2, MW-3, and MW-4 in the near future. Hand-bailing of free product will continue until the product skimmer system is installed.

Should you have any questions or comments, or require additional information, please contact me at the above listed phone number.

Sincerely,

Marla D. Guensler

Subject: Letter Report on Second Quarter 1992 Groundwater Monitoring at Exxon
Station No. 7-3006, 720 High Street, Oakland, California

Ms Guensler:

As requested by Exxon Company U.S.A. (Exxon), this letter report summarizes the methods and results of the second quarter 1992 groundwater monitoring performed by RESNA Industries Inc. (RESNA) at the above subject site. The site is located at 720 High Street, in a predominantly industrial area of Oakland, California. It is bound on the northwest by High Street, on the southwest by Coliseum Way, on the northeast by a former dry-cleaning facility, on the south by Alameda Avenue, and on the southeast by a vacant lot (Plate 1) Site Vicinity Map.

The objectives of this quarterly monitoring are to evaluate trends in the groundwater flow direction and gradient, and trends in concentrations of gasoline and diesel hydrocarbons in the local groundwater associated with a former used-oil and three underground gasoline storage tanks (USTs) at the site.

Prior to the present monitoring, RESNA (formerly Applied GeoSystems [AGS]) performed an environmental investigation related to the removal of four USTs in April 1987 (AGS, May 13, 1987, July 10, 1987, and October 16, 1989), and an environmental investigation between September 1987 and May 1988 that included drilling nine boreholes (B-1 through B-9) around the former UST locations and installing groundwater monitoring wells MW-1 through MW-9 in the boreholes (AGS, August 5, 1988). AGS performed a Supplemental Subsurface Investigations that included: drilling of eleven boreholes (B-10 through B-20) and the installation of groundwater monitoring wells MW-10 through MW-13 in boreholes B-10 through B-13 in November 1989 (AGS, January 30, 1990), and drilling of boreholes B-21 through B-32 and the installation of groundwater monitoring wells MW-14 and MW-15

October 21, 1992
87042.11

in boreholes B-31 and B-32 in November 1990 (AGS, May 21, 1991). Quarterly monitoring was initiated by AGS in the second quarter of 1989 (AGS, October 16, 1989) and is continuing. The locations of the borings, wells, and pertinent site facilities are shown on the Generalized Site Plan, (Plate 2). The results of these investigations are presented in the reports listed in the references section of this letter report.

Groundwater Sampling and Gradient Evaluation

For the latest quarterly groundwater monitoring, RESNA personnel collected groundwater monitoring data from the one offsite monitoring well (MW-1) and thirteen onsite monitoring wells (MW-2 through MW-4, and MW-6 through MW-15) on June 22, 1992. Monitoring well MW-5 was destroyed in July 1989. Field work during this quarter consisted of measuring depth-to-water (DTW) levels, subjectively analyzing water from the wells for the presence of floating product, removal of any floating product encountered, and purging and sampling the groundwater from monitoring wells MW-1, MW-6, MW-7, MW-9, MW-10, MW-11, MW-14, and MW-15 for laboratory analysis. Monitoring wells MW-2 through MW-4, MW-8, MW-12, and MW-13 were not sampled due to the presence of a sheen or floating product noted during subjective analysis of the wells. Field methods used by RESNA personnel are described in Appendix A, Groundwater Sampling Protocol.

RESNA calculated groundwater elevations for each well by subtracting the measured DTW, including corrections for product thickness when necessary, from the elevation of the wellhead. The measured DTW levels, product thickness, wellhead elevations, and groundwater elevations for this and previous monitorings at the site are summarized in Table 1, Cumulative Groundwater Monitoring Data. Data from Table 1 were used to produce hydrographs which show fluctuations in local groundwater elevations. Hydrographs for the fourteen monitoring wells are included in Appendix B. During June monitoring, the groundwater elevation for monitoring well MW-9 appeared to be anomalously low. Therefore, this well was not used in the groundwater gradient interpretations for this quarter. Based on the June 22, 1992 groundwater elevation data, the interpreted local groundwater gradient and flow direction is approximately 0.03 toward the southwest. Groundwater Gradient Map (Plate 3) is RESNA's interpretation of the local groundwater gradient for this quarter. This groundwater gradient is generally consistent with previously interpreted groundwater gradients.

Groundwater samples were collected from wells one offsite well MW-1 and the thirteen onsite monitoring wells MW-2 through MW-4, and MW-6 through MW-15 for subjective analysis before the monitoring wells were purged and sampled. No evidence of floating product or noticeable hydrocarbon vapor was observed in the water samples collected from wells MW-1, MW-6, MW-7, MW-9, MW-10, MW-11, MW-14, and MW-15 for laboratory

Quarterly Groundwater Monitoring
Exxon 7-3006, Oakland, California

October 21, 1992
87042.11

analysis. A sheen or floating product was observed in the groundwater samples collected from wells MW-2 through MW-4, MW-8, MW-12, and MW-13. These subjective analyses are summarized in Table 1.

The one offsite monitoring well and seven onsite monitoring wells were purged and sampled in accordance with the enclosed groundwater sampling protocol (Appendix A). Well purge data sheets and stabilization graphs for the monitored parameters temperature, turbidity, pH, and conductivity for the eight monitoring wells are included in Appendix A.

Results of Laboratory Analysis

Groundwater samples from the monitoring wells were analyzed for gasoline constituents benzene, toluene, ethylbenzene, and total xylenes (BTEX), and total petroleum hydrocarbons as gasoline (TPHg) using modified Environmental Protection Agency (EPA) Methods 5030/8015/8020, and for total petroleum hydrocarbons as diesel (TPHd) using modified EPA Methods 3510/8015. The Chain of Custody Record and Laboratory Analysis Reports for the monitoring wells are included in Appendix C.

The chemical analyses results of this, and previous, quarterly monitoring are summarized in Table 2, Cumulative Results of Laboratory Analyses of Groundwater Samples. Graphic distributions of TPHg, benzene, and TPHd concentrations in the local groundwater for this quarterly monitoring are shown on Plate 4, TPHg Concentrations in Groundwater, Plate 5, Benzene Concentrations in Groundwater, and Plate 6, TPHd Concentrations in Groundwater. Chemical analyses data from Table 2 were used to produce histograms which show fluctuations in TPHg concentrations over time. Histograms for MW-1 through MW-4, and MW-6 through MW-15 are included on the hydrographs in Appendix B.

Results of this quarter's laboratory analyses of groundwater samples from wells MW-1, MW-6, MW-7, MW-9, MW-10, MW-11, MW-14, and MW-15 indicate that:

- o concentrations of TPHg and TPHd were nondetectable in wells MW-9 and MW-10.
- o concentrations of TPHg were detected in the groundwater from wells MW-1, MW-6, MW-7, MW-11, MW-14, and MW-15 and range from 0.084 parts per million (ppm) in MW-11 to 43 ppm in MW-6.
- o concentrations of TPHd were detected in the groundwater from wells MW-1, MW-6, MW-7, MW-11, MW-14, and MW-15 and range from 0.057 ppm in MW-11 to 1.7 ppm in MW-6.

Quarterly Groundwater Monitoring
Exxon 7-3006, Oakland, California

October 21, 1992
87042.11

- o concentrations of benzene was nondetectable in wells MW-9, MW-10, and MW-14.
- o Benzene was detected in the groundwater at concentrations of 0.0015 ppm in MW-11, 0.0049 ppm in MW-1, 0.099 ppm in MW-15, 0.260 ppm in MW-7, and 11 ppm in well MW-6; which are greater than the California Department of Health Services (CDHS) Maximum Contaminant Level (MCL) of 0.001 ppm for benzene in drinking water.
- o toluene, ethylbenzene, and total xylene concentrations in wells MW-1, MW-7, MW-9, MW-10, MW-11, MW-14, and MW-15 ranged from nondetectable (<0.0005 ppm) to 0.027 ppm;
- o A concentration of toluene greater than the CDHS recommended Drinking Water Action Level (DWAL) of 0.100 ppm was present in well MW-6 (0.150 ppm);
- o A concentration of total xylenes greater than the CDHS MCL of 1.750 ppm, was present in well MW-6 (5.000 ppm);
- o A concentration of ethylbenzene greater than the CDHS MCL of 0.680 ppm was present in well MW-6 (2.100 ppm).

APPENDIX A

GROUNDWATER SAMPLING PROTOCOL, WELL PURGE DATA SHEETS, AND STABILIZATION GRAPHS

Quarterly Groundwater Monitoring
Exxon 7-3006, Oakland, California

October 21, 1992
87042.11

GROUNDWATER SAMPLING PROTOCOL

The static water level in each well that contained groundwater was measured with a Solinst® water-level indicator; this instrument is accurate to the nearest 0.01 foot. To calculate the differences in groundwater elevations, these groundwater depths were subtracted from wellhead elevations measured initially on December 13, 1989, by Ron Archer, Civil Engineer, Inc., of Pleasanton, California, a licensed land surveyor.

Groundwater samples collected for subjective evaluation were collected by gently lowering approximately half the length of a clean Teflon® bailer past the air-water interface (if possible) and collecting a sample from near the surface of the water in the well. The samples were checked for measurable floating hydrocarbon product.

Before water samples were collected from the groundwater monitoring wells, the wells were purged until stabilization of the temperature, pH, and conductivity was obtained. Approximately three well casing volumes were purged before those characteristics stabilized. Turbidity measurements were collected from the purged well water. The quantity of water purged from the wells was calculated as follows:

$$1 \text{ well casing volume} = \pi r^2 h (7.48) \text{ where:}$$

- r = radius of the well casing in feet.
h = column of water in the well in feet (well depth - depth to water)
7.48 = conversion constant from cubic feet to gallons

gallons of water purged/gallons in 1 well casing volume = well casing volumes removed.

After purging, each well was allowed to recharge to the approximate initial water level. Groundwater samples were then collected with an Environmental Protection Agency (EPA) approved Teflon® sampler which had been cleaned with Alconox® and deionized water. The water samples were carefully poured into 40-milliliter glass vials, which were filled so as to produce a positive meniscus. Each sample container was preserved with hydrochloric acid, sealed with a cap containing a Teflon® septum, and subsequently examined for air bubbles to avoid headspace which would allow volatilization to occur. The samples were promptly transported in iced storage in a thermally-insulated ice chest, accompanied by a Chain of Custody Record, to a California-certified laboratory.

CHAIN OF CUSTODY RECORDS AND LABORATORY ANALYSIS REPORTS

July 01, 1992

Mr. Mark Detterman
Resna
42501 Albrae Street, Suite 100
Fremont, CA 94538

RE: PACE Project No. 420623.501
Client Reference: Exxon 7-3006 (EE)

Dear Mr. Detterman:

Enclosed is the report of laboratory analyses for samples received June 23, 1992.

If you have any questions concerning this report, please feel free to contact us.

Sincerely,

Carol Reid
Carol Reid
Project Manager

REPORT OF LABORATORY ANALYSIS

Mr. Mark Detterman
Page 10

QUALITY CONTROL DATA

July 01, 1992
PACE Project Number: 420623501

Client Reference: Exxon 7-3006 (EE)

TPH GASOLINE/BTEX
Batch: 70 13500
Samples: 70 0168929, 70 0168937

METHOD BLANK:

Parameter	Units	MDL	Method Blank
TOTAL FUEL HYDROCARBONS, (LIGHT):			-
Purgeable Fuels, as Gasoline (EPA 8015)	ug/L	50	ND
PURGEABLE AROMATICS (BTXE BY EPA 8020):			-
Benzene	ug/L	0.5	ND
Toluene	ug/L	0.5	ND
Ethylbenzene	ug/L	0.5	ND
Xylenes, Total	ug/L	0.5	ND

LABORATORY CONTROL SAMPLE AND CONTROL SAMPLE DUPLICATE:

Parameter	Units	MDL	Reference	Dupl	Recv	Recv
			Value			
Purgeable Fuels, as Gasoline (EPA 8015)	ug/L	50	428	107%	109%	1%
Benzene	ug/L	0.5	40.0	102%	101%	0%
Toluene	ug/L	0.5	40.0	112%	104%	7%
Ethylbenzene	ug/L	0.5	40.0	111%	107%	3%
Xylenes, Total	ug/L	0.5	80.0	116%	105%	9%
