Dear Mr. Seto:

Attached for your review and comment is a copy of the *Dispenser and Piping Upgrade Sampling Report* for the above referenced site. Upon information and belief, I declare, under penalty of perjury, that the information contained in the attached document is true and correct.

If you have any questions or concerns, please call me at (707) 865-0251.

Sincerely,

Denis L. Brown
Sr. Environmental Engineer

Re: **Dispenser and Piping Upgrade Sampling Report**

Shell Service Station
29 Wildwood Avenue
Piedmont, California
SAP # 135765
Cambria Project #207-0687-001
ACEH Case #1107

Alameda County
JUN 10 2005
Environmental Health

Dear Mr. Seto:

On behalf of Equilon Enterprises LLC dba Shell Oil Products US (Shell), Cambria Environmental Technology, Inc. (Cambria) is submitting this *Dispenser and Piping Upgrade Sampling Report* which presents the results of soil sampling conducted during station upgrade activities at the referenced site. Presented below are a summary of site conditions, sampling activities, and analytical results.

SITE CONDITIONS

Site Location: This active Shell station is located at the Wildwood Avenue and Grand Avenue intersection in Piedmont, California (Figure 1). The site is surrounded primarily by commercial and residential properties. The site contains three product underground storage tanks (USTs), one 550-gallon waste oil UST, and two dispenser islands.

SAMPLING ACTIVITIES AND SAMPLE ANALYSIS

Personnel Present: Lawrence Seto, Senior Hazardous Materials Specialist, Department of Environmental, Health, Alameda County Health Care Services Agency (ACHCSA) (April 5 and 29, 2005).
Andy Ellsmore, Staff Geologist, Cambria (April 5, 2005).
Steward Dalie, Senior Staff Geologist, Cambria (April 29, 2005).

Cambria
Environmental
Technology, Inc.

5900 Hollis Street
Suite A
Emeryville, CA 94608
Tel (510) 420-0700
Fax (510) 420-9170

Sample Dates: April 5, 2005 and April 29, 2005.

Sampling Requirements: As Mr. Seto directed during field activities on April 5 and 29, 2005, one soil sample was collected beneath each of the two dispensers and at selected piping locations. Samples were collected at a minimum of 2 feet into native soil (Figure 2). Attachment A presents Cambria's standard procedures for dispenser and piping sampling.

Dispenser Soil Sampling: As Mr. Seto directed on April 5, 2005, two dispenser soil samples were collected at depths of 3 feet below grade (fbg) (Figure 2). Field indications of hydrocarbons, including staining and odor, were observed in both dispenser areas. A pink-colored viscous product was observed in the Dispenser 1/2 excavation. This pink liquid was not observed during piping sampling on April 29, 2005. Due to subsurface piping and conduit restrictions, over-excavation was not conducted at this location (Figure 2).

Product Piping Soil Sampling: As Mr. Seto directed on April 29, 2005, three product piping soil samples were collected at depths of 5 fbg (Figure 2). Field indications of hydrocarbons, including staining and odor, were observed in the vicinity of the P-2-5 sample location. No over-excavation was conducted at this location.

Sample Analyses: State-certified Kiff Analytical Laboratories (Kiff) of Davis, California analyzed the two dispenser soil samples for total petroleum hydrocarbons as gasoline (TPHg), benzene, toluene, ethyl benzene, and xylenes (BTEX), and methyl tert-butyl ether (MTBE) by EPA Method 8260B. In an attempt to identify the pink-colored viscous product, Kiff also analyzed the soil sample collected from the Dispenser 1/2 for total petroleum hydrocarbons as diesel (TPHd) by EPA Method 8015M. State-certified Severn Trent Laboratories Inc. of Pleasanton, California analyzed the product piping soil samples for TPHg, BTEX, and MTBE. Table 1 summarizes laboratory analytical results. Attachment B presents laboratory analytical reports and chain of custody records.

Waste Handling: Upgrade activities generated approximately 47 tons of soil. To characterize stockpiled soil for disposal, one four-point composite sample was collected and analyzed for TPHg and BTEX by EPA Method 8260B and for total lead by EPA Method 6010B. The stockpile was transported from the site to Forward Landfill in Manteca, California for disposal on May 13, 2005. The soil disposal confirmation is included as Attachment C.

ANALYTICAL RESULTS

TPHg was detected in three soil samples at a maximum concentration of 610 parts per million (ppm) in soil sample P-2-5. TPHd was detected in two soil samples at a maximum concentration of 890 ppm in sample D-1-3.0. The pink fluid was observed at this sample location during sampling activities. From the field observations and laboratory analysis, the identity of the fluid remains unclear. Benzene was detected in one soil sample at a concentration of 0.068 ppm in sample D-1-3.0. Ethylbenzene, total xylenes, and MTBE were detected at maximum concentrations of 8.0 ppm, 0.66 ppm, and 0.18 ppm, respectively, in sample D-1-3.0. Toluene was not detected in any of the samples collected during these activities. Table 1 summarizes laboratory analytical results. The certified analytical reports are included in Attachment B.

CONCLUSIONS

This site is an open ACHCSA leaking underground fuel tank case under Mr. Jerry Wickham's oversight. In Cambria's April 6, 1998 *Dispenser Soil Sampling Report*, TPHg was reported at a concentration of 1,600 ppm for one soil sample collected from beneath Dispenser 3/4; benzene at 6.3 ppm; toluene at 24 ppm; ethylbenzene at 18 ppm; xylenes at 160 ppm; and MTBE at 36 ppm (Table 1).

Comparison of current soil results to the previous 1998 soil sampling results indicate that maximum gasoline and BTEX concentrations have decreased. As a result, it appears that the currently detected hydrocarbon soil impacts have resulted from a previous release, and not from a new release.

Based on these soil sampling results, Cambria does not recommend any additional soil investigation or remediation in the dispenser and piping areas.

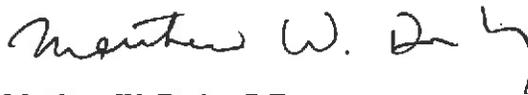

CLOSING

Please call David Gibbs (510) 420-3363 if you have any questions or comments.

Sincerely,
Cambria Environmental Technology, Inc.

David M. Gibbs, P.G.
Project Geologist

Matthew W. Derby, P.E.

Standard Piping and Dispenser Removal Sampling Procedures

CAMBRIA

STANDARD PIPING AND DISPENSER REMOVAL SAMPLING PROCEDURES

Cambria Environmental Technology, Inc. (Cambria) has developed standard operating procedures for collecting soil samples during petroleum dispenser and piping removal. These procedures ensure that the samples are collected, handled, and documented in compliance with California Administration Code Title 23: Waters; Chapter 3: Water Resources Control Board; Subchapter 16: Underground Storage Tank Regulations (Title 23). Cambria's sampling procedures are based on guidelines contained in the California State Regional Water Quality Control Board Tri-Regional Staff Recommendations for Preliminary Evaluation and Investigation of Underground Tank Sites dated August 10, 1990.

Piping and Dispenser Removal Sampling

The objective of sample collection during routine dispenser and piping removals is to determine whether hydrocarbons or other stored chemicals have leaked to the subsurface. We collect one soil sample from the native soil beneath each dispenser unit, at each piping elbow, and at every 20 ft of product piping, as applicable.

The soil samples are collected in steam cleaned brass or steel tubes from either a driven split-spoon type sampler or the bucket of a backhoe. When a backhoe is used, approximately three inches of soil are scraped from the surface and the tube is driven into the exposed soil.

Upon removal from the split-spoon sampler or the backhoe, the samples are trimmed flush, capped with Teflon sheets and plastic end caps, labeled, logged and refrigerated for delivery under chain of custody to a State certified analytic laboratory.

Case Narrative

Hydrocarbons reported as TPH as Diesel do not exhibit a typical Diesel chromatographic pattern for sample D-2-3.0. These hydrocarbons are higher boiling than typical diesel fuel.

Legend and Notes

Analysis Flag

L2

Reporting limits were raised due to high level of analyte present in the sample.

Result Flag

M4

MS/MSD spike recoveries were above acceptance limits. See blank spike (LCS).

Q1

Quantit. of unknown hydrocarbon(s) in sample based on gasoline.

RESIDUAL MANAGEMENT PROCEDURE

ISSUED DATE: 08/01/01
CANCELS ISSUE:
ISSUED BY: LRR

RESIDUAL STREAM: SOIL WITH UNLEADED GASOLINE
VENDOR: ALLIED-BFI
LOCATION: ALLIED WASTE - MANTECA
9999 SOUTH AUSTIN ROAD
MANTECA, CA. 95336

CALIFORNIA - TRANSPORTATION AND RETAIL

BTEX - EPA 8021B/8260B (IF BENZENE IS > OR = TO 10 MG/KG THEN TCLP BENZENE IS REQUIRED)

CAM METALS = TTLC METALS - LEAD ONLY

STLC ON ALL TTLC METALS 10 TIMES STLC MAXIMUM

TTLC LEAD => 13 MG/KG REQUIRES ORGANIC LEAD ANALYSIS

IF ANY TTLC TOTAL METAL IS > OR = TO 20 TIMES TCLP REGULATORY LEVELS, TCLP IS REQUIRED

TOTAL PETROLEUM HYDROCARBONS, METHOD 418.1 OR 8015 - GASOLINE

~~418.1 METHOD 8260B (GC/MS)~~

AQUATIC BIOASSAY (FISH TOX) IS ONLY TO BE RUN ON SAMPLES > OR = TO 5000 PPM TPH. AQUATIC BIOASSAY (FISH TOX) = PART 800 OF STANDARD METHODS FOR THE EXAMINATION OF WATER AND WASTEWATER (15TH EDITION)

LABORATORY INSTRUCTIONS (MINIMUM GUIDELINES ONLY)

-ALTERNATE APPROVED TEST METHODS PER SW846 ARE ALSO ACCEPTABLE

-ALL REQUIRED TESTS ON COMPOSITE (MAX 4:1)

-LABORATORY IS TO SUPPLY QA/QC INFORMATION WITH ALL ANALYTICAL REPORTS

~~-MAIL OR FAX ALL ANALYSIS TO THE CENTRALIZED RESIDUAL MANAGEMENT TEAM~~
