

CERTIFICATION OF PUBLIC NOTIFICATION

I, Kyle S. Flory, hereby certify that on the 17th day of August, 2017, I caused a true and correct reproduction of the public notice document titled: *Fact Sheet on Environmental Assessment, Mike Roberts Color Production, 6701 - 6707 Shellmound Street, Emeryville, CA 94608, Site Cleanup Program No. RO0000548 and GeoTracker Global ID T0600100894*, a copy of which is attached, to be distributed by U.S. mail, postage prepaid, to the mailing list prepared based on a distribution map. A copy of the mailing list and proof of mailing are attached.

FACT SHEET ON ENVIRONMENTAL ASSESSMENT

MIKE ROBERTS COLOR PRODUCTION

6701 – 6707 Shellmound Street, Emeryville, CA 94608
Site Cleanup Program No. RO0000548 and
GeoTracker Global ID T0600100894

Site Remediation Summary

This fact sheet has been prepared to inform community members and other interested stakeholders regarding the status of a proposed soil and soil vapor cleanup at the Mike Roberts Color Production facility located at 6701-6707 Shellmound Street, Emeryville, California. The prospective purchaser of the site, Anton Emeryville, LLC is proposing to conduct remedial action via soil vapor extraction and soil excavation to allow site redevelopment as a multi-unit residential building. A Corrective Action Plan (CAP) has been prepared to address contaminated soils and soil vapor that are the subject of remediation at the site.

Site Background

The site is located at 6701-6707 Shellmound Street in Emeryville. The site is approximately 2.27 acres in area and occupies assessor parcel number 049-1490-002. The current site buildings consist of a two-story office building and a warehouse building. The site is located in a mixed commercial/industrial and residential area of Emeryville. It is bounded by the Ashby Avenue off-ramp from Interstate I-80 to the north and west, Shellmound Street and a railroad right-of-way to the east, and a commercial building to the south.

The site land historically consisted of San Francisco Bay tidal mud flats and was below sea level until the mid- to late-1930s, when a levee was built west of the site and a highway (Eastshore Highway, now Interstate 80) was constructed on the levee. From that time until the early to mid-1950s the area between the highway and the former shoreline, including the subject property and vicinity, were intermittently filled using non-native materials to create buildable land. The existing site buildings were constructed over the fill materials in approximately 1963. The fill material is underlain by bay sediments known as Old Bay Mud.

A label tape manufacturer (Dymo) operated at the site from approximately 1963 to 1979, and reportedly used chemicals including methyl isobutyl ketone (MIBK, which is also known as 4-methyl-2-pentanone) and methyl ethyl ketone (MEK, also known as 2-butanone) stored in three underground storage tanks (USTs), previously located in the eastern portion of the site. The USTs were removed in 1989. Mike Roberts Color Production (MRCP) operated at the site from 1979 to 1989, and initially manufactured and printed colored postcards before later incorporating color printing, lithography, and off-set printing operations. Nady Systems, Inc. (Nady) purchased the property from MRCP in 1990 and utilized the site for office use and for storage of electronic sound equipment, product shipping and receiving, and minor equipment repair.

Due to the presence of contamination associated with the former USTs, placement of fill material to create buildable land, and an apparent release of volatile organic compounds (VOCs), a number of investigations and interim cleanup actions, including excavation and soil vapor extraction (SVE), were conducted between 1989 through 2017. Remediation of releases from the USTs to soil and groundwater were successfully completed. Investigations identified the presence of fill material contaminated by total petroleum hydrocarbons (TPH), VOCs, semi-volatile organic compounds (SVOCs), polychlorinated biphenyls (PCBs), and metals. Subsurface investigations conducted in 2015 encountered chlorinated VOCs beneath the property. Due to the nature of the chlorinated VOC contamination, ACDEH required that further investigation be undertaken to determine the extent of contamination. Interim Remedial Measures (IRM) using SVE was conducted in 2016 and 2017 to cleanup VOC-affected soil and soil vapor to mitigate potential vapor intrusion to adjacent property and to reduce source mass.

Proposed Actions

The proposed redevelopment of the site includes excavation of VOC contaminated soil, the extent of which will be determined by focused soil and soil vapor investigations. Periodic interim operation of the SVE system will be conducted before the existing building is demolished. The majority of existing contamination is located within the upper approximately 10 feet of the surface. The additional investigations conducted at the site indicate that relatively minor VOC contamination will be present at the site after the proposed excavation. The redevelopment project will serve as a cap and will prevent future site users and maintenance workers from contacting or being affected by the remaining VOC contamination or other known non-volatile contamination at the site. A vapor mitigation system will be installed beneath the ground level of the proposed building to prevent migration of any vapors into occupied portions of the building.

A CAP has been prepared to describe the additional investigations and remedial actions to be completed. Excavated contaminated soil will be segregated and transported to appropriately permitted offsite landfills or other disposal facilities. A CAP Implementation Plan and a Site Mitigation and Contingency Plan will be prepared to describe additional remediation conducted to address contaminated soil and manage the presence of contaminated soil and groundwater that may be encountered during excavation, grading, and construction activities.

All work will be carried out in a manner designed to be protective of the environment and the local community.

What this Means To You

During site excavation activities, increased construction traffic and noise from excavation and loading activities into trucks to transport the soils offsite are expected. Dust generation during excavation and loading will be actively monitored and suppressed to standards set by regulatory

agencies, including the Bay Area Air Quality Management District (BAAQMD). Equipment noise is anticipated to be moderate during working hours.

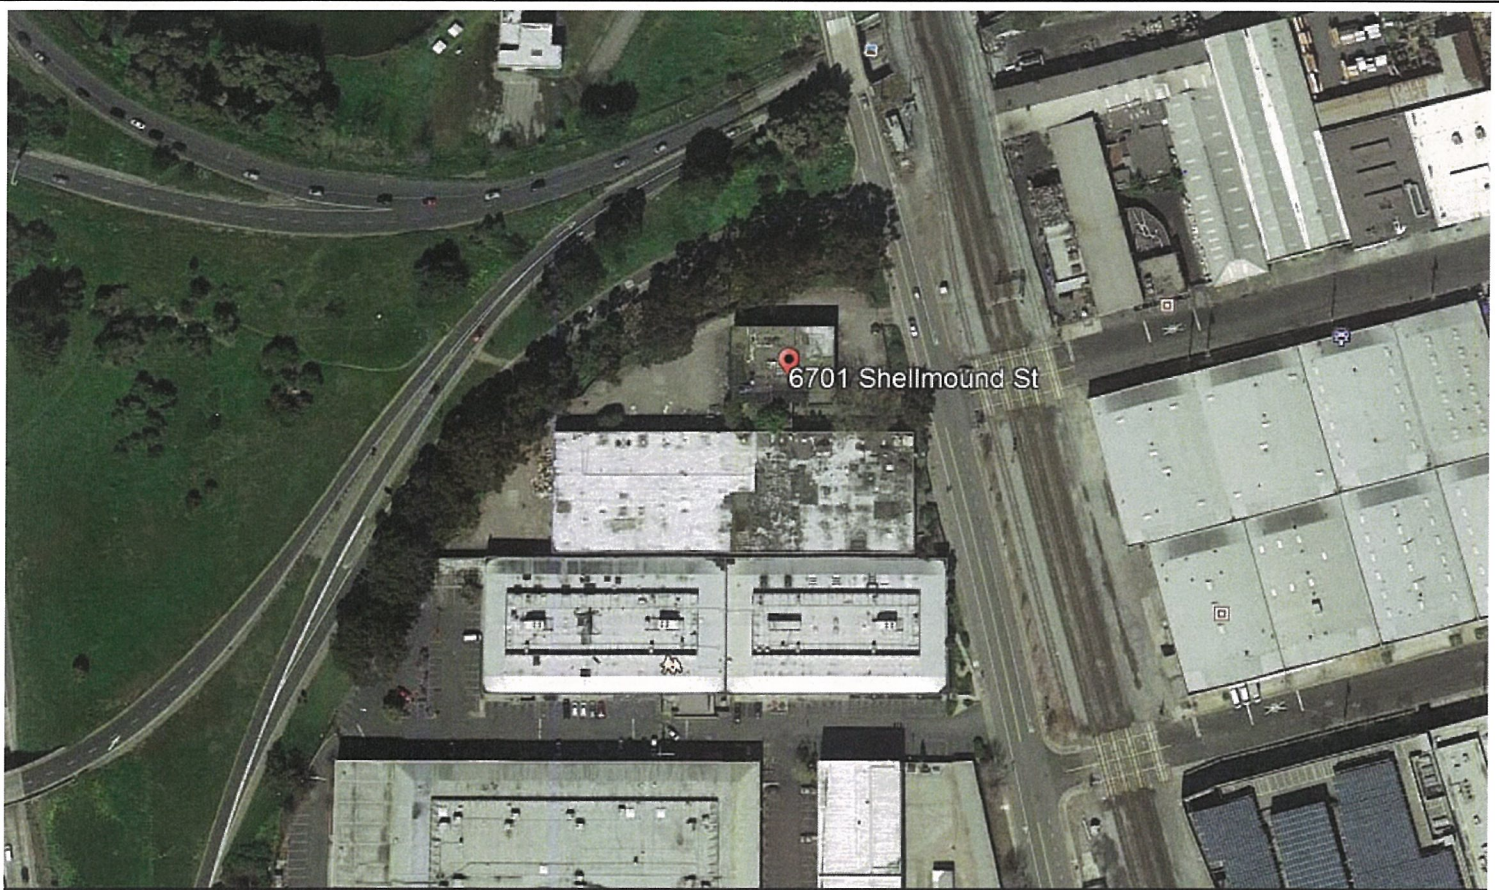

Next Step

Anton Emeryville, LLC, will work with ACDEH to implement the CAP, prepared by their consultant PES Environmental, Inc (PES). The public is invited to review and comment on the proposed corrective action. The plan is available on ACDEH's website (<http://www.acgov.org/aceh/lop/ust.htm>) or the State Water Resources Control Board's GeoTracker website (<http://geotracker.waterboards.ca.gov/>).

Please send written comments regarding the site or the CAP to Mark Detterman of the ACDEH, or Kyle Flory of PES, at the address on the following page. Please refer to ACDEH case RO0000548 in any correspondence. **All written comments received by September 19, 2017** will be forwarded to the prospective purchaser and will be considered and responded to prior to a final determination on the proposed cleanup.
