

MEMO TO FILE -

From: Eva Chu

Date: April 30, 1992

Subject: Scotsman Co., 6055 Scarlett Ct., Dublin

Scott and Eva spoke with Tim Reed of RESNA on phone. Asked him to clarify:

1. Some screen intervals are only 5 feet in length - MW-3, MW-4
2. Discrepancy with water encounters (w.e.) vs. soil description:
MW-2: w.e. @ 4.9', soil at 5, 10, 15' is damp
MW-3: w.e. @ 3.5', soil at 15' is saturated
MW-4: w.e. @ 7.1', soil at 5, 10, 15' is moist
MW-5: w.e. @ 6.0', soil at 15' is saturated
...etc.
3. Tim said many borings were smeared and was difficult to tell when ground water was encountered.
4. Registered geologist to sign all technical reports.
5. Soil samples missing from borings. How is RESNA able to claim that soil not contaminated except immediately around tank pit. E.g.

MW-2: one soil sample (ss) missing at 15'
MW-3: one ss missing at 10'
MW-4: two ss missing at 10 and 15'
MW-5: one ss missing at 10'
MW-7: two ss missing at 10 and 15'
6. Told Tim that during overexcavation to let pit fill with water and record level where water enters.

Memo to File:

Tim Reed (RESNA) called today. He said "dirty soil" analyses indicate 10 ppm TPH-G. He wants to aerate it on-site. I referred him to BAAQMD for permit requirements. This soil is planned ~~not~~ to go back into hole. "Clean" import will be brought in to fill pit, then other previously-tested "clean" soil placed on top and compacted. I advised him the samples are required discretely for each 20 yds³ to reuse soil on-site. I requested that the import soil be ~~brought~~ placed into the excavation first.
