

PHONE LOG (901 LINCOLN AVE)

10/8/96 Spoke to Martha Randfleisch, ACC, who has temporarily taken Misty K's place while she is out ill. Groundwater monitoring was recently conducted out at the site in Sept 96. A report documenting g.w. sampling & sampling of bio-indicator parameters will be submitted shortly. Also, I requested that ACC submit info on depth of on-site bldg. to assure that it is not redirecting flow direction between MW-1 & MW-4 (downgradient well). The report will include this info. S & L stated that if concentrations continue to be high in Well MW-1, a risk assessment should be submitted addressing both soil & g.w. They should include a rough estimate of biodegradation rates.
