Ms. Cynthia Chapman  
Hazardous Materials Specialist  
Department of Environmental Health  
Alameda County Health Agency  
80 Swan Way, Rm. 200  
Oakland, California 94621

Dear Ms. Chapman:

Subject: Laboratory Report, ANCC Oakland Facility

As we discussed on the telephone yesterday, enclosed is a copy of the laboratory report for the free product removed from groundwater monitoring wells GW-1 and GW-6. As you can see, the results for GW-6 (primarily petroleum hydrocarbons as diesel and kerosene) are consistent with its location near an underground storage tank, which was used for boiler fuel prior to its closure.

The identification of the free product in GW-1 is consistent with the speculation that its source may be from off-site. The PCB's and semi-volatile compounds found in the free product are common constituents of waste oils.

In addition to the laboratory results, I have enclosed the results of our biweekly visual monitoring and free product removal. As you will note, free product levels have been dramatically reduced.

This letter will serve to confirm our notification to you of the identification of the free product in these groundwater monitoring wells as you requested in your letter of December 5, 1990. If additional notification action is required, please advise me. Please do not hesitate to call me with questions or comments.

Very truly yours,

DUNN GEOSCIENCE CORPORATION

Edward W. Alusow  
Senior Environmental Scientist

### NOTES:

1. All elevations are measured in feet above mean sea level, depths are measured in feet.
2. M.P. Elev. = measuring point elevation.
3. Device used to measure product thicknesses: IP = interface probe  
B = clear bailer & tape measure

ADJ. Water Depth = product thickness x product specific gravity yields water thickness which is subtracted from measured water depth.
