Subject: American National Can Company  
Former Oakland, California Facility

Dear Mr. Chan:

Rust Environment & Infrastructure, Inc. (RUST) has completed a twelfth round of quarterly groundwater monitoring for the subject site, the eighth round following the revised groundwater monitoring plan (dated April 27, 1992). This round of monitoring was conducted between March 18 and 22, 1994.

While completing this round of sampling, monitoring wells GW-2 in Area 3 and TW-1 in Area 2 had thin layers of floating free product. Due to the presence of free product in these wells, representative groundwater samples could not be collected. However, the layers of product identified during this round were too thin to be removed.

The building and infrastructure of this former ANC facility are being dismantled and removed by the site's current owner. Due to these activities several of the monitoring wells were abandoned under a permit with Alameda County Zone 7. As a result, groundwater samples could not be collected from former wells MW-18 and MW-19. Since the presence of product precluded the collection of a sample from GW-2 for analysis, the sample from MW-6 was analyzed for semi-volatile organic compounds. Groundwater samples from all other monitoring wells were collected and analyzed in accordance with the revised monitoring plan.

A trace estimated concentration (2 ppb) of 1,1-dichloroethane was detected in MW-8, the same as it was in March, 1993. This data suggests that the contaminant plume emanating from Ekotek Lube into Area 3 expands temporarily during seasonal periods of high groundwater. This monitoring well will continue to be monitored to evaluate the significance of the presence of contamination. Otherwise, analytical results obtained from this round of groundwater monitoring do not reveal any remarkable changes from previous sampling events.

 His boss

Daniel Murphy  
 Sr. Waste Mgmt Engineer

Call / Ed Alston:  
 stated that his 18, 19, 17, 21 etc have been destroyed &  
 properly during excavation. His families w/ S. Kruefeld of Cal EPAPTS  
 + the solvent storage problem was on the 10/5. He expects that  
 demo should conclude in August unless the top in 12/15/93 will start  
 the work in the next week.

Mr. Barney M. Chan

With this letter, RUST is forwarding the results obtained during this quarterly monitoring event. Table 1 is summary of groundwater levels and product thickness measurements recorded March 18, 1994. Plate 17 is a groundwater contour map of these groundwater elevation measurements. Table 2 provides a summary of the results from analyses of groundwater samples collected. A detailed laboratory analytical report is included with this letter.

If you have any questions, please call me.

Very truly yours,

Edward W. Alusow  
Senior Project Manager

\* Indicates a thin film (<0.01-feet thick) of product was detected on the water surface with an oil/water interface probe.  
All elevations (EL.) are expressed in feet above mean sea level.  
Depths are measured in feet below the well measuring point (M.P.).  
Estimated product specific gravity of 0.83 was used to calculate an adjusted depth to water in wells containing product.

-- indicates compound was not analyzed for.

nd indicates compound was not detected.

J indicates compound was detected at an amount below the specified reporting limit. Consequently, the amount should be considered an approximate value.

B indicates that the compound was detected in the method blank.

Dup X-1 is a field duplicate of sample MW - 6.

The following samples were received at Anamatrix for analysis :

| ANAMATRIX ID | CLIENT SAMPLE ID |
|--------------|------------------|
| 9403343- 1   | 3:MW-1           |
| 9403343- 2   | 3:MW-20          |
| 9403343- 3   | 3:MW-6           |
| 9403343- 4   | 3:MW-7           |
| 9403343- 5   | 3:DUPX-1         |
| 9403343- 6   | T. BLANK         |

This report is organized in sections according to the specific Anamatrix laboratory group which performed the analysis(es) and generated the data.

The results contained within this report relate to only the sample(s) tested. Additionally, these data should be considered in their entirety and Anamatrix cannot be responsible for the detachment, separation, or otherwise partial use of this report.

Anamatrix is certified by the California Department of Health Services (DHS) to perform environmental testing under Certificate Number 1234.

If you have any further questions or comments on this report, please call us as soon as possible. Thank you for using Anamatrix.

This report consists of 48 pages.

## ANAMETRIX REPORT DESCRIPTION GCMS

### Organic Analysis Data Sheets (OADS)

OADS forms contain tabulated results for target compounds. The OADS are grouped by method and, within each method, organized sequentially in order of increasing Anametrix ID number.

### Tentatively Identified Compounds (TICs)

TIC forms contain tabulated results for non-target compounds detected in GC/MS analyses. TICs must be requested at the time samples are submitted at Anametrix. TIC forms immediately follow the OADS form for each sample. If TICs are requested but not found, then TIC forms will not be included with the report.

### Surrogate Recovery Summary (SRS)

SRS forms contain quality assurance data. An SRS form will be printed for each method, if the method requires surrogate compounds. They will list surrogate percent recoveries for all samples and any method blanks. Any surrogate recovery outside the established limits will be flagged with an "\*", and the total number of surrogates outside the limits will be listed in the column labelled "Total Out".

### Matrix Spike Recovery Form (MSR)

MSR forms contain quality assurance data. They summarize percent recovery and relative percent difference information for matrix spikes and matrix spike duplicates. This information is a statement of both accuracy and precision. Any percent recovery or relative percent difference outside established limits will be flagged with an "\*", and the total number outside the limits will be listed at the bottom of the page. Not all reports will contain an MSR form.

### Qualifiers

Anametrix uses several data qualifiers (Q) in its report forms. These qualifiers give additional information on the compounds reported. They should help a data reviewer to verify the integrity of the analytical results. The following is a list of qualifiers and their meanings:

- U - Indicates that the compound was analyzed for, but was not detected at or above the specified reporting limit.
- B - Indicates that the compound was detected in the associated method blank.
- J - Indicates that the compound was detected at an amount below the specified reporting limit. Consequently, the amount should be considered an approximate value. Tentatively identified compounds will always have a "J" qualifier because they are not included in the instrument calibration.
- E - Indicates that the amount reported exceeded the linear range of the instrument calibration.
- D - Indicates that the compound was detected in an analysis performed at a secondary dilution.
- A - Indicates that the tentatively identified compound is a suspected aldol condensation product. This is common in EPA Method 8270 soil analyses.

Absence of a qualifier indicates that the compound was detected at a concentration at or above the specified reporting limit.

### REPORTING CONVENTIONS

- Due to a size limitation in our data processing step, only the first eight (8) characters of your project ID and sample ID will be printed on the report forms. However, the report cover letter and report summary pages display up to twenty (20) characters of your project and sample IDs.
- Amounts reported are gross values, i.e., not corrected for method blank contamination.

QA/QC SUMMARY :

- A surrogate recovery is outside established limits in the EPA Method 8270 analysis of sample 3:MW-1. The sample was re-extracted outside of established hold time and yielded better results. Both results are reported.

QA/QC SUMMARY :

- The concentrations reported as diesel for samples 3: <sup>NW</sup>mw-1 and 3:MW-7 are primarily due to the presence of a heavier petroleum product of hydrocarbon range C18-C36, possibly motor oil or aged diesel fuel.

Note : Reporting limit is obtained by multiplying the dilution factor times 50 ug/L.  
The surrogate recovery limits for o-terphenyl are 30-130%.

ND - Not detected at or above the practical quantitation limit for the method.

TPHd - Total Petroleum Hydrocarbons as C10-C28 is determined by GCFID following sample extraction by EPA Method 3510.

All testing procedures follow California Department of Health Services (Cal-DHS) approved methods.

Workorder # : 9403344  
Date Received : 03/22/94  
Project ID : 35195.101  
Purchase Order: 29518

The following samples were received at Anamatrix for analysis :

| ANAMATRIX ID | CLIENT SAMPLE ID |
|--------------|------------------|
| 9403344- 1   | 4:MW-14          |
| 9403344- 2   | 4:MW-9           |
| 9403344- 3   | 4:MW-8           |
| 9403344- 4   | T. BLANK         |

This report is organized in sections according to the specific Anamatrix laboratory group which performed the analysis(es) and generated the data.

The results contained within this report relate to only the sample(s) tested. Additionally, these data should be considered in their entirety and Anamatrix cannot be responsible for the detachment, separation, or otherwise partial use of this report.

Anamatrix is certified by the California Department of Health Services (DHS) to perform environmental testing under Certificate Number 1234.

If you have any further questions or comments on this report, please call us as soon as possible. Thank you for using Anamatrix.

This report consists of 24 pages.

## ANAMETRIX REPORT DESCRIPTION GCMS

### Organic Analysis Data Sheets (OADS)

OADS forms contain tabulated results for target compounds. The OADS are grouped by method and, within each method, organized sequentially in order of increasing Anametrix ID number.

### Tentatively Identified Compounds (TICs)

TIC forms contain tabulated results for non-target compounds detected in GC/MS analyses. TICs must be requested at the time samples are submitted at Anametrix. TIC forms immediately follow the OADS form for each sample. If TICs are requested but not found, then TIC forms will not be included with the report.

### Surrogate Recovery Summary (SRS)

SRS forms contain quality assurance data. An SRS form will be printed for each method, if the method requires surrogate compounds. They will list surrogate percent recoveries for all samples and any method blanks. Any surrogate recovery outside the established limits will be flagged with an "\*", and the total number of surrogates outside the limits will be listed in the column labelled "Total Out".

### Matrix Spike Recovery Form (MSR)

MSR forms contain quality assurance data. They summarize percent recovery and relative percent difference information for matrix spikes and matrix spike duplicates. This information is a statement of both accuracy and precision. Any percent recovery or relative percent difference outside established limits will be flagged with an "\*", and the total number outside the limits will be listed at the bottom of the page. Not all reports will contain an MSR form.

### Qualifiers

Anametrix uses several data qualifiers (Q) in its report forms. These qualifiers give additional information on the compounds reported. They should help a data reviewer to verify the integrity of the analytical results. The following is a list of qualifiers and their meanings:

- U - Indicates that the compound was analyzed for, but was not detected at or above the specified reporting limit.
- B - Indicates that the compound was detected in the associated method blank.
- J - Indicates that the compound was detected at an amount below the specified reporting limit. Consequently, the amount should be considered an approximate value. Tentatively identified compounds will always have a "J" qualifier because they are not included in the instrument calibration.
- E - Indicates that the amount reported exceeded the linear range of the instrument calibration.
- D - Indicates that the compound was detected in an analysis performed at a secondary dilution.
- A - Indicates that the tentatively identified compound is a suspected aldol condensation product. This is common in EPA Method 8270 soil analyses.

Absence of a qualifier indicates that the compound was detected at a concentration at or above the specified reporting limit.

### REPORTING CONVENTIONS

- Due to a size limitation in our data processing step, only the first eight (8) characters of your project ID and sample ID will be printed on the report forms. However, the report cover letter and report summary pages display up to twenty (20) characters of your project and sample IDs.
- Amounts reported are gross values, i.e., not corrected for method blank contamination.

Project Number : 35195.101  
 Date Released : 04/04/94  
 Instrument I.D.: HP23

| Anamatrix I.D. | Client I.D.  | Date Analyzed | Reporting Limit (ug/L) | Amount Found (ug/L) | Surrogate %Rec |
|----------------|--------------|---------------|------------------------|---------------------|----------------|
| 9403344-03     | 4:MW-8       | 03/25/94      | 50                     | ND                  | 70%            |
| BM2411F9       | METHOD BLANK | 03/25/94      | 50                     | ND                  | 82%            |

Note : Reporting limit is obtained by multiplying the dilution factor times 50 ug/L.  
 The surrogate recovery limits for o-terphenyl are 30-130%.

ND - Not detected at or above the practical quantitation limit for the method.

TPHd - Total Petroleum Hydrocarbons as C10-C28 is determined by GCFID following sample extraction by EPA Method 3510.

All testing procedures follow California Department of Health Services (Cal-DHS) approved methods.

\* The Method Reporting Limit must be multiplied by the Reporting Limit Multiplication Factor (RLMF) to achieve the compound's reporting limit in the analysis.

ND : Not detected at or above the reporting limit for the analysis as performed.

TPHg : Determined by GC/FID following sample purge & trap by EPA Method 5030.

BTEX : Determined by modified EPA Method 8020 following sample purge & trap by EPA Method 5030.

Lab Control Limits for surrogate compound p-Bromofluorobenzene are 61-139%.

All testing procedures follow California Department of Health Services (Cal-DHS) approved methods.

 Date Received : 03/18/94  
 Project ID : 35195.101  
 Purchase Order: 29518

The following samples were received at Anamatrix for analysis :

| ANAMATRIX ID | CLIENT SAMPLE ID |
|--------------|------------------|
| 9403293- 1   | 2:MW-21          |

This report is organized in sections according to the specific Anamatrix laboratory group which performed the analysis(es) and generated the data.

The results contained within this report relate to only the sample(s) tested. Additionally, these data should be considered in their entirety and Anamatrix cannot be responsible for the detachment, separation, or otherwise partial use of this report.

Anamatrix is certified by the California Department of Health Services (DHS) to perform environmental testing under Certificate Number 1234.

If you have any further questions or comments on this report, please call us as soon as possible. Thank you for using Anamatrix.

## **ANAMETRIX REPORT DESCRIPTION INORGANICS**

### **Analytical Data Report (ADR)**

The ADR contains tabulated results for inorganic analytes. All field samples, QC samples and blanks were prepared and analyzed according to procedures in the following references:

- ▶ "Test Methods for Evaluating Solid Waste," SW-846, EPA, 3rd Edition, November 1986.
- ▶ "Methods for Chemical Analysis of Water and Wastes," EPA, 3rd Edition, 1983.
- ▶ CCR Title 22, Section 66261, Appendix II, California Waste Extraction Test.
- ▶ CCR Title 22, Section 66261, Appendix XI, Organic Lead.
- ▶ "Standard Methods for the Examination of Water and Wastewater," APHA, AWWA, WEF, 18th Edition, 1992.
- ▶ USEPA Contract Laboratory Program Statement of Work for Inorganic Analyses, ILM02.1, 1991.

### **Matrix Spike Report (MSR)**

The MSR summarizes percent recovery and relative percent difference information for matrix spikes and matrix spike duplicates. This information is a statement of both accuracy and precision. MSRs may not be provided with all analytical reports. Anametrix control limit for MSR is 75-125% with 25% for RPD limits.

### **Laboratory Control Sample Report (LCSR)**

The LCSR summarizes percent recovery information for laboratory control spikes on reagent water or soil. This information is a statement of performance for the method, i.e., the samples are properly prepared and analyzed according to the applicable methods. Anametrix control limit for LCSR is 80-120%.

### **Method Blank Report (MBR)**

The MBR summarizes quality control information for reagents used in preparing samples. The absolute value of each analyte measured in the method blank should be below the method reporting limit for that analyte.

### **Post Digestion Spike Report (PDSR)**

The PDSR summarizes percent recovery information for post digestion spikes. A post digestion spike is performed for a particular analyte if the matrix spike recovery is outside of established control limits. Any percent recovery for a post digestion spike outside of established limits for an analyte indicates probable matrix effects and interferences for that analyte. Anametrix control limit for PDSR is 85-115%.

### **Qualifiers (Q)**

Anametrix uses several data qualifiers in inorganic reports. These qualifiers give additional information on the analytes reported. The following is a list of qualifiers and their meanings:

- I - Sample was analyzed at the stated dilution due to spectral interferences.
- U - Analyte concentration was below the method reporting limit. For matrix and post digestion spike reports, a value of "0.0" is entered for calculation of the percent recovery.
- B - Sample concentration was below the reporting limit but above the instrument detection limit. Result is entered for calculation of the percent recovery only.
- H - Spike percent recovery was outside of Anametrix control limits due to interferences from relatively high concentration level of the analyte in the unspiked sample.
- L - Reporting limit was increased to compensate for background absorbances or matrix interferences.

### **Comment Codes**

In addition to qualifiers, the following codes are used in the comment section of all reports to give additional information about sample preparation methods:

- A - Sample was prepared for silver based on the silver digestion method developed by the Southern California Laboratory, Department of Health Services, "Acid Digestion for Sediments, Sludges, Soils and Solid Wastes. A Proposed Alternative to EPA SW846, Method 3050." Environmental Science and Technology, 1989, 23, 898-900.
- T - Spikes were prepared after extraction by the Toxicity Characteristic Leaching Procedure (TCLP).
- C - Spikes were prepared after extraction by the California Waste Extraction Test (CWET) method.
- D - Reported results are dissolved, not total, metals.

### **Reporting Conventions**

Analytical values reported are gross values, i.e., not corrected for method blank contamination. Solid matrices are reported on a wet weight basis, unless specifically requested otherwise. Unless noted, all samples were prepared according to procedures in the EPA Contract Laboratory Program Statement of Work, ILM02.1, 1991.

REPORT SUMMARY  
ANAMETRIX, INC. (408)432-8192

MR. ED ALUSOW  
RUST ENVIRONMENT AND INFRASTRUCTURE  
12 METRO PARK ROAD  
ALBANY, NY 12205

Workorder # : 9403293  
Date Received : 03/18/94  
Project ID : 35195.101  
Purchase Order: 29518  
Department : METALS  
Sub-Department: METALS

SAMPLE INFORMATION:

| ANAMETRIX<br>SAMPLE ID | CLIENT<br>SAMPLE ID | MATRIX | DATE<br>SAMPLED | METHOD |
|------------------------|---------------------|--------|-----------------|--------|
| 9403293- 1             | 2:MW-21             | WATER  | 03/18/94        | 6010   |
