

Meeting

2/18/93

Attending: Mr. David Glick, GeoPlexus, Inc.
Mr. Tad Tassone, Wilkinson Equip. Corp.
Mr. Gerry Wilkinson, Prop. Owner
Ms. Juliet Shin, Haz. Mat. Spec.

Mr. Wilkinson gave me two copies of GeoPlexus' excavation report, detailing the collection of confirmatory samples collected from inside the building, near former sample #21, which contained 4600ppm O+C. He also submitted the work plan for the installation of one monitoring well.

5 soil samples were collected from the inside excavation and no contaminants were detected. Mr. Glick stated that they will scrape up the loose soils from inside the excavation, 2 ft in depth, and combine this soil w/ the remaining stockpiled soil at the site for treatment.
