Re: **Former Chevron Service Station #9-5630**
997 Grant Avenue, San Lorenzo, California

Dear Ms. Shin.

Enclosed is the First and Second Quarter Groundwater Monitoring Reports for 1996, that were prepared by our consultant Blaine Tech Services Inc. for the above noted site. I apologize for the delay in submittal of the First Quarter Report and future reports will be submitted in a timely manner. Ground water samples were collected and analyzed for TPH-g, BTEX and MTBE constituents.

Samples were not taken from monitoring well C-3 in the First or Second Quarters, as Blaine Tech could not locate the well on the site. I have done some research on what happened to this well and determined that it last sampled by Sierra Environmental Services (Sierra) in June of 1993. When Sierra returned to sample the well in September of 1993, the well was covered by soil in a 25 foot x 25 foot x 6" pattern. The technician for Sierra tried to locate the well with a shovel but was unable to find it. They thought it may have been damaged by the activity that had occurred on the site. Blaine Tech advised me that they had excavated a 10 foot square area around the presumed location of the monitoring well in October of 1995, but was unable to locate it. I asked Sierra to send me the survey data when they installed the wells and this information I have just received and it will be sent to Blaine Tech to determine the location of monitoring well C-3. I would expect to have an answer in the next quarterly report; if the monitoring well C-3 is still there and able to sample, or that it was cut off because of construction activity and the well has to be closed.

Concentrations of benzene were not detected in any of the monitoring wells in the First Quarter Report. Depth to ground water varied from 16.01 feet to 16.81 feet below grade and with the direction of flow to the southwest. In the Second Quarter Report, concentrations of benzene were detected in one monitoring well, C-6 in the amount of 0.84ppb. Depth to ground water varied from 14.88 feet to 15.13 feet below grade with direction of flow to the south southeast.

Chevron request that monitoring wells C-1, C-5 and C-7 be sampled semiannually, instead of quarterly. All of the wells have been non detect for BTEX constituents for at least the last four quarters. Chevron will continue to monitor the remaining wells quarterly. If you have any questions, call me at (510) 842-9136.

Sincerely,
CHEVRON PRODUCTS COMPANY

1st Quarter 1996 Monitoring at 9-5630

First Quarter 1996 Groundwater Monitoring at
Chevron Service Station Number 9-5630
997 Grant Avenue
San Lorenzo, CA

Monitoring Performed on March 8, 1996

Groundwater Sampling Report 960308-T-2

This report covers the routine quarterly monitoring of groundwater wells at this Chevron facility. Blaine Tech Services, Inc.'s work at the site includes inspection, gauging, evacuation, purgewater containment, sample collection and sample handling in accordance with standard procedures that conform to Regional Water Quality Control Board requirements.

Routine field data collection includes depth to water, total well depth, thickness of any separate immiscible layer, water column volume, calculated volume of a three-case volume purge, elapsed evacuation time, total volume of water removed, and standard water parameter instrument readings. Sample material is collected, contained, stored, and transported to the laboratory in conformance with EPA standards. Purgewater is, likewise, collected and transported to Chevron's Richmond Refinery for disposal.

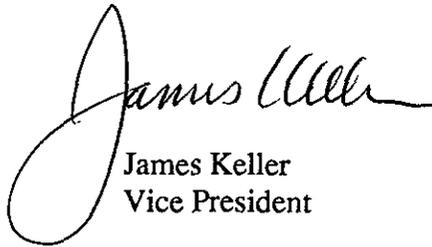

Basic field information is presented alongside analytical values excerpted from the laboratory report in the cumulative table of **WELL DATA AND ANALYTICAL RESULTS**. The full analytical report for the most recent samples is located in the **Analytical Appendix**. The table also contains new groundwater elevation calculations taken from the computer plotted gradient map which is located in the **Professional Engineering Appendix**.

At a minimum, Blaine Tech Services, Inc. field personnel are certified upon completion of a forty-hour Hazardous Materials and Emergency Response training course per 29 CFR 1910.120. Field personnel are also enrolled in annual eight hour refresher courses.

Blaine Tech Services, Inc. conducts sampling and documentation assignments of this type as an independent third party. In order to avoid compromising the objectivity necessary for the proper and disinterested performance of this work, Blaine Tech Services, Inc. concentrates on objective data collection and does not participate in the interpretation of analytical results, the definition of geological or hydrological conditions, the formulation of recommendations, or the marketing of remedial systems.

Please call if you have any questions.

Yours truly,

James Keller
Vice President

JPK/dk

Total Purgeable Petroleum Hydrocarbons (TPPH) with BTEX and MTBE

Analyte	Detection Limit ug/L	Sample Results ug/L
TPPH as Gas	50	N.D.
Methyl t-Butyl Ether	2.5	N.D.
Benzene	0.50	N.D.
Toluene	0.50	N.D.
Ethyl Benzene	0.50	N.D.
Xylenes (Total)	0.50	N.D.
Chromatogram Pattern:		
Surrogates	Control Limits %	% Recovery
Trifluorotoluene	70 130	77 <i>ck</i>

Analytes reported as N.D. were not present above the stated limit of detection.

Please Note:

The LCS is a control sample of known, interferent-free matrix that is analyzed using the same reagents, preparation, and analytical methods employed for the samples. The matrix spike is an aliquot of sample fortified with known quantities of specific compounds and subjected to the entire analytical procedure. If the recovery of analytes from the matrix spike does not fall within specified control limits due to matrix interference, the LCS recovery is to be used to validate the batch.

** MS=Matrix Spike, MSD=MS Duplicate, RPD=Relative % Difference
