Eric Nennerman, DA

From Sierra Environmental's files: A note from Nancy Vukelich to Sierra Environmental raising question as to whether the data from the 6/3/92 monitoring event was accurate since concentrations had increased dramatically from previous quarter. According to a letter from Sierra Environmental to Nancy Vukelich, the wells were resampled again on 7/2/92. During this sampling event, Well C-3 results went from approximately 7,000 ppb TPHg to ND and the levels in Well C-2 stayed relatively the same. Sierra confirmed that the 6/3/92 results were accurate. However, Chevron still had in its' files for that quarter, a report that listed the lower concentrations. The follow-up sampling was not in Chevron's files, only in Sierra's files.

It appears that some of the numbers from the correct quarterly report table were switched around and used to replace some of the results observed in the other wells.

Chevron will research some of the other cases that Nancy Vukelich was overseeing prior to approaching her for discussion. According to John Randall, he has mentioned this situation to some of his other staff members.

Mr. Miller will submit copies of the correct quarterly reports, that were in Sierra's files, the 7/2/92 re-sampling, and Nancy's memo.

Chevron wishes to bring in an independent investigator to research this case. Possibly Brian Keller and Associates, who worked with Judge Bill Noyle as mediator in past.

Chevron will audit approximately 10 to 15 files that Nancy Vukelich was the lead for. The audit will take approximately 1 to 1.5 months. Mr. Miller will keep John Samuelson posted.
