Re: Former Chevron Service Station #9-2384  
15526 Hesperian Blvd., San Lorenzo, CA

Dear Ms. Leech,

Please find attached the semi-annual groundwater report prepared by Blaine Tech dated March 26, 1996 describing the results of the sampling event performed on February 29, 1996.

The groundwater samples collected by Blaine Tech were analyzed for the presence of TPHG and BTEX constituents. The results from this sampling event were consistent with historical sampling events. Depth to groundwater was measured between 9.44 and 11.54 feet.

Chevron will continue with the semi-annual schedule currently in place for this site. As of April 1st, 96 I have taken on the monitoring of this site as Chevron's Groundwater Coordinator. If you have any questions or comments regarding this site please call. I can be reached by phone at (510) 842-9449 or by fax at (510) 842-5966.

Sincerely,

## 1st Quarter 1996 Monitoring at 9-2384

First Quarter 1996 Groundwater Monitoring at  
Chevron Service Station Number 9-2384  
15526 Hesperian Blvd.  
San Lorenzo, CA

Monitoring Performed on February 29, 1996

---

### Groundwater Sampling Report 960229-W-2

This report covers the routine quarterly monitoring of groundwater wells at this Chevron facility. Blaine Tech Services, Inc.'s work at the site includes inspection, gauging, evacuation, purgewater containment, sample collection and sample handling in accordance with standard procedures that conform to Regional Water Quality Control Board requirements.

Routine field data collection includes depth to water, total well depth, thickness of any separate immiscible layer, water column volume, calculated volume of a three-case volume purge, elapsed evacuation time, total volume of water removed, and standard water parameter instrument readings. Sample material is collected, contained, stored, and transported to the laboratory in conformance with EPA standards. Purgewater is, likewise, collected and transported to Chevron's Richmond Refinery for disposal.

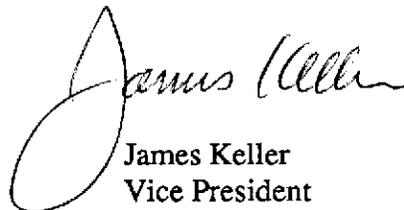

Basic field information is presented alongside analytical values excerpted from the laboratory report in the cumulative table of **WELL DATA AND ANALYTICAL RESULTS**. The full analytical report for the most recent samples is located in the **Analytical Appendix**. The table also contains new groundwater elevation calculations taken from the computer plotted gradient map which is located in the **Professional Engineering Appendix**.

At a minimum, Blaine Tech Services, Inc. field personnel are certified upon completion of a forty-hour Hazardous Materials and Emergency Response training course per 29 CFR 1910.120. Field personnel are also enrolled in annual eight hour refresher courses.

Blaine Tech Services, Inc. conducts sampling and documentation assignments of this type as an independent third party. In order to avoid compromising the objectivity necessary for the proper and disinterested performance of this work, Blaine Tech Services, Inc. concentrates on objective data collection and does not participate in the interpretation of analytical results, the definition of geological or hydrological conditions, the formulation of recommendations, or the marketing of remedial systems.

Please call if you have any questions.

Yours truly,

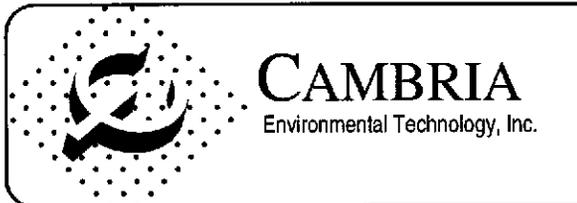

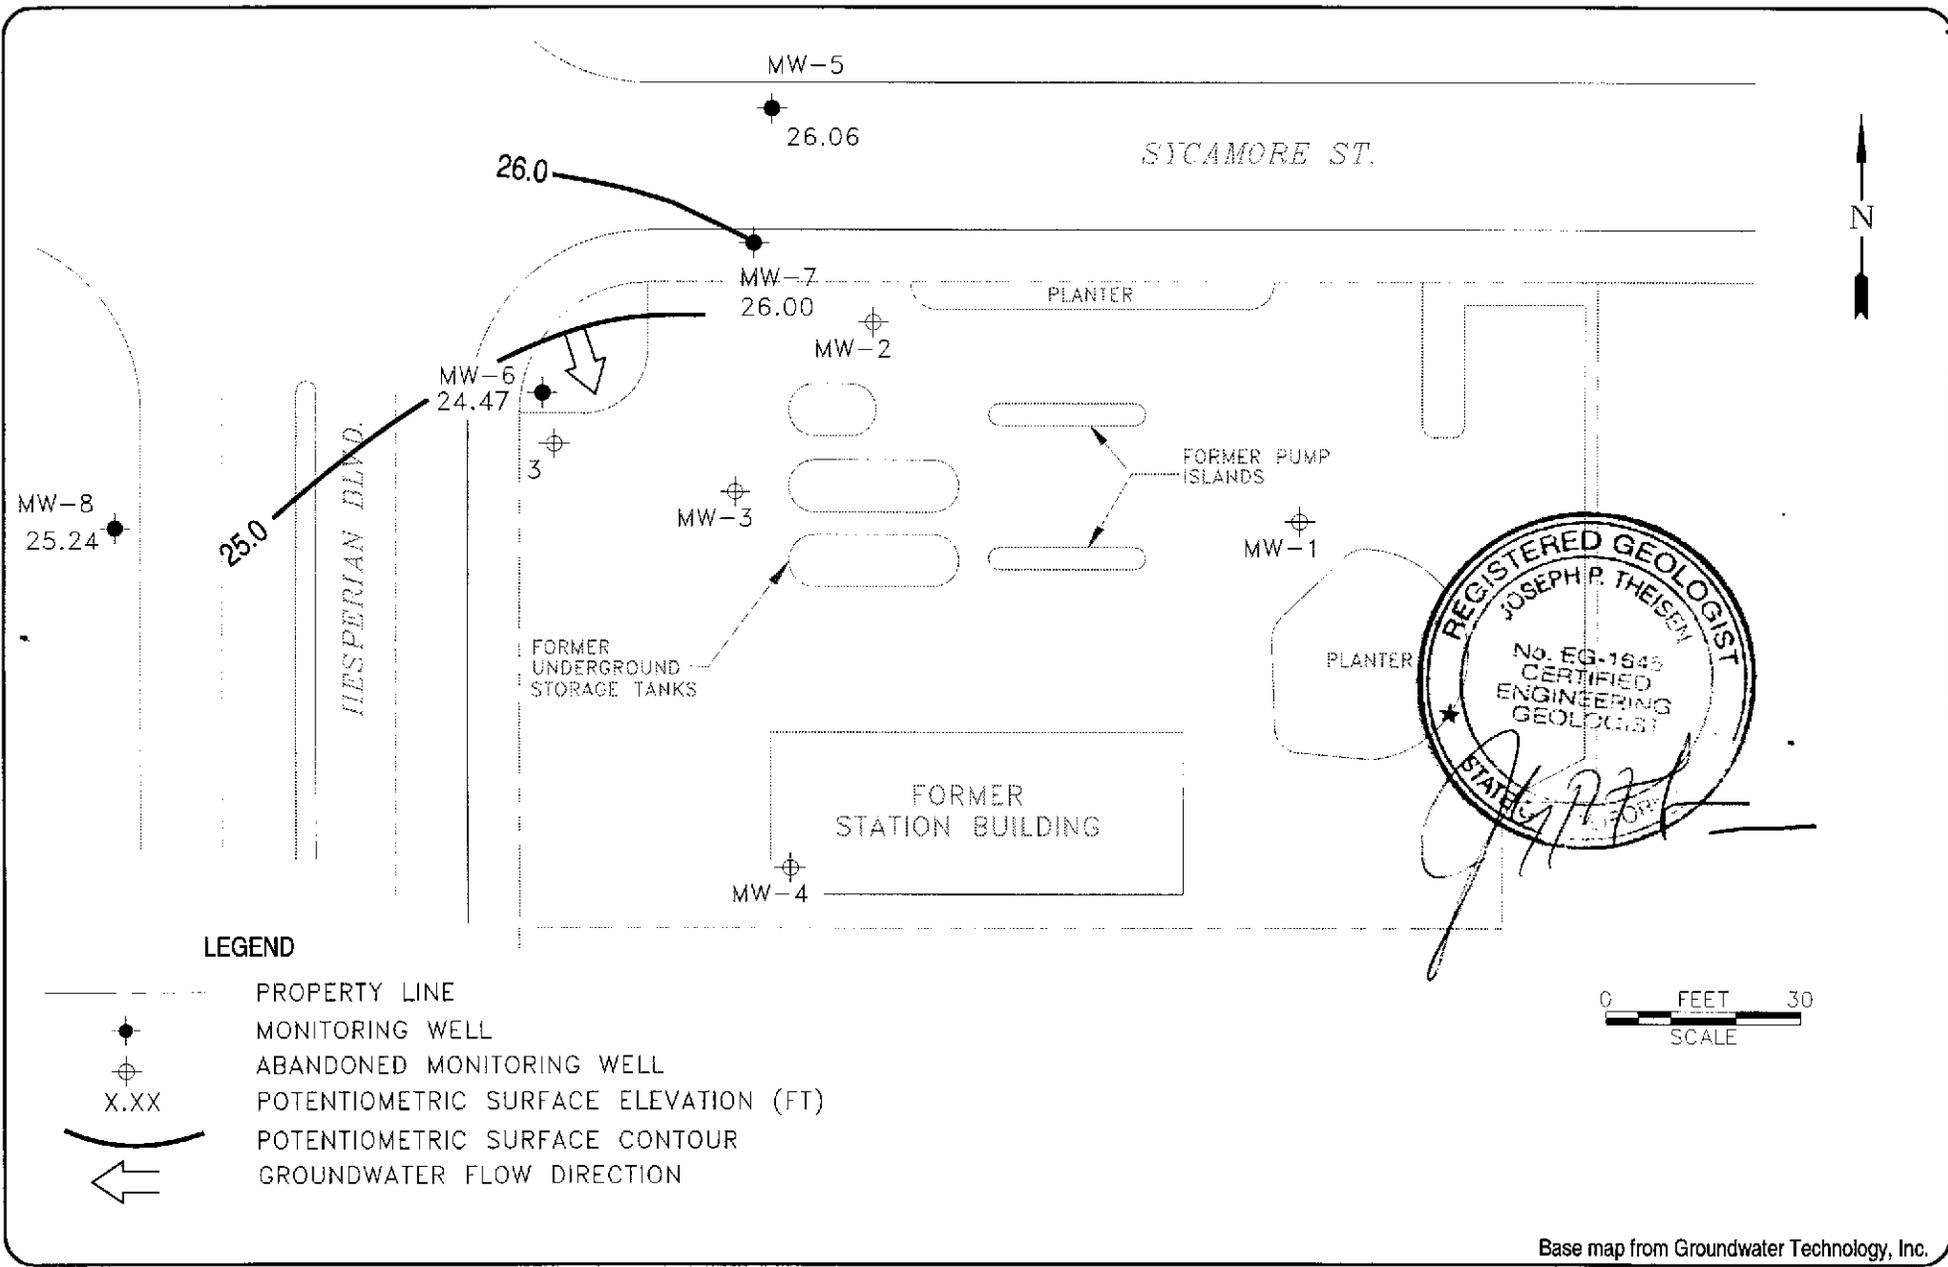

James Keller  
Vice President

JPK/dk

Peggy Penner  
Project Manager

**Please Note:**

The LCS is a control sample of known, interferent-free matrix that is analyzed using the same reagents, preparation, and analytical methods employed for the samples. The matrix spike is an aliquot of sample fortified with known quantities of specific compounds and subjected to the entire analytical procedure. If the recovery of analytes from the matrix spike does not fall within specified control limits due to matrix interference, the LCS recovery is to be used to validate the batch.
