

Meeting

11/6/92

Mr. Falconer met w/ Ms. Shin at the County office in response to a letter recently written by the County requiring that groundwater investigations be conducted at the site. Mr. Falconer stated that he did install monitoring wells and had them sampled in April 1992.

The report for this groundwater investigation was prepared in June 1992. Ms. Shin stated that this report was not in C.O.P.'s files for the site.

Mr. Falconer requested closure for the site since the one quarterly sampling event did not identify any contamination. Ms. Shin stated that RWQCB normally requires 4 quarters of monitoring, however, since soil at the site was excavated down to N.D., and it may be possible to conduct one more round of sampling 6 months after

The first record. If the results are
N.D., then Mr. Stein will
recommend closure for the site.
