RE: Preparation of Soil Piles for Loading and Results of Soil  
Sampling - 1628 Webster Street, Alameda, California.

Dear Mr. and Mrs. Larkin;

The pre-1995 soil piles left at 1628 Webster Street in Alameda following the work performed by Exceltech were re-excavated and piled in preparation for loading between September 06 and 08, 1995 by DECON Environmental Services, Inc. of Hayward, California. Concrete rubble, the remaining tank and other scrap steel, and general trash were piled separately.

As of September 12, 1995, three soil piles were present at the property with their long dimension parallel to Pacific Avenue. Both larger piles (North Pile and Middle Pile, Figure 1) consisted of soil largely free of odors. These two piles total approximately 1500 +/- cubic yards. The third soil pile (South Pile) consists of approximately 300 cubic yards of notably odoriferous soil with a typical gleyed coloration (various shades of gray-green).

Twenty samples were collected from the three soil piles on September 12, 1995. These were positioned so as to represent the soil in the newly placed soil piles and were numbered in the manner in which the laboratory was to prepare their composites for analysis. Figure 1 shows the approximate soil subsample locations.

The analytical results are attached.

TPH-Gasoline + BTEX {Purgeable aromatics}(EPA 5030/8015M+8020) was found to be not detected in all five composite soil samples. However, an unknown profile of chromatogram peaks was found in the composite from the 300 Yd<sup>3</sup> odoriferous soil pile (South Pile) equivalent to 5.3 mg/Kg TPH-Gasoline and probably represents biodegradation altered gasoline.

TPH-Diesel (EPA 3550.8015M) was not detectable in any of the five composite soil samples, however, unknown hydrocarbons in the diesel range amounting to 8.0 mg/Kg were reported in the composite from the 300 Yd<sup>3</sup> odoriferous soil pile (South Pile).

Mr. and Mrs. Larkin  
September 29, 1995  
Page 2

TPH-Oil (EPA 3550.8015M) was found in all five composite soil samples, as reported in the laboratory report cover letter. It was later quantified by the laboratory as follows:

North Half North Pile (Sample 1)	260 mg/Kg
South Half North Pile (Sample 2)	16 mg/Kg
North Half Middle Pile (Sample 3)	230 mg/Kg
South Half Middle Pile (Sample 4)	130 mg/Kg
South Pile (Sample 5)	180 mg/Kg

Purgeable halocarbons (EPA 8010) were not detected in any of the five composite soil samples.

Base/neutral & acid extractables (Semivolatile Organic Compounds) (EPA 8270) were not detected in the composite soil samples from the two soil piles largely free of odors. One EPA 8270 compound was found in the 300 Yd<sup>3</sup> odoriferous soil pile (South Pile). The identified compound was Bis(2-ethylhexyl) Phthalate, a common plasticizer, at a concentration of 0.7 mg/Kg against a detection limit of 0.5 mg/Kg. This level should not be a cause of concern.

Total Recoverable Petroleum Hydrocarbons (TRPH) (EPA 418.1) were found in all five composite soil samples.

North Half North Pile (Sample 1)	110 mg/Kg
South Half North Pile (Sample 2)	86 mg/Kg
North Half Middle Pile (Sample 3)	510 mg/Kg
South Half Middle Pile (Sample 4)	110 mg/Kg
South Pile (Sample 5)	170 mg/Kg

TTLIC Metals - Cd, Cr, Pb, Ni, Zn

Cadmium (Cd) was not detected from any of the composite soil samples.

Chromium (Cr), Lead (Pb), Nickel (Ni), and Zinc (Zn) were detected and were reported, in units of mg/Kg, as follows:

	Chromium	Lead	Nickel	Zinc
Sample 1	24	18	32	38
Sample 2	28	20	36	48
Sample 3	31	31	34	50
Sample 4	25	22	35	36
Sample 5	31	22	32	32

Mr. and Mrs. Larkin  
September 29, 1995  
Page 3

The presence of Motor Oil and TRPH in all five soil samples and the presence of lead above 5.0 mg/Kg precludes the use of this soil as construction fill. These two analytes and the reported concentrations of chromium and nickel indicated that all of the soil stockpiled at 1628 Webster Street in Alameda will have to be handled as a regulated soil.

Quotations for shipping and disposing of this soil have been solicited and will be forwarded as soon as all three are available.

Please do not hesitate to call me at (510) 373-9211 should you have any questions.

Sincerely,

Gary D. Lowe, R.G., C.E.G., C.H.  
Principal, Hydrogeologist

## REPORTING INFORMATION

Sample(s) were received cold and in good condition on **September 12, 1995**. They were refrigerated on receipt, and analyzed on the date shown on the attached report. ChromaLab followed EPA or equivalent methods for all analyses reported.

Motor Oil was also found in all the samples.
