Re: **Laboratory Test Results from**
Soil Stockpile at Tank Removal Excavation
5787 Scarlett Ct. (Lew Doty Property)
Dublin, CA

Dear Mr. Wistar:

Pursuant to our telephone conversation today, enclosed please find the laboratory test results of the latest sampling of the excavated soils that have been stockpiled and aerated at the above-referenced site. The samples were taken under your observation at locations specified by you in the stockpiled material. The test results indicate non-detectable levels of total petroleum hydrocarbons and related aromatic compounds.

As we discussed, because of the stigma of contamination, it is becoming increasingly difficult to find Class 2 or 3 landfills that will take such soil, even if the contaminant has been removed. At the present time we are unable to find any local landfills that will accept this soil. Since it is now evident that very high costs will be involved for transportation and disposal of the soils, possibly to a Class 1 landfill, you indicated that the soil, if demonstrated to have non-detectable levels, might be used for backfill in the excavation.

It would be appreciated if you could review the latest laboratory test results, including the map of sample locations, and advise us if you have any problems with utilizing the aerated soil as backfill in the excavation. We would like to proceed with this operation as soon as possible so that the area can be secured before the onset of winter rains.

Thank you for your cooperation in this matter. If you have any questions, please feel free to call.

Very truly yours,

Louis A. Richardson
