pleasant hill office
7840 Amador Valley, Dublin
questions re. site closure request
he feels that site may qualify for closure and wants to submit a request
i encouraged him to really look carefully at the data - sampling locations, spacing of borings, screening intervals, source area characterization
he should only submit a closure request if he thinks it is warranted as reviewing these requests diverts resources from other efforts
if he thinks closure is warranted, then his closure request package should be complete and include a complete review of the site files
all historical data needs to be considered and explained
i suggested that he keep us apprised of their schedule so that if a deadline is looming for them, we get plenty of notice and a chance to try to meet it
