

7-20-99

Paul Waite of Cambria said they will be installing the monitoring well near the float box in the next few weeks. Paul will send me another ^{copy} of the site plan showing the proposed Office Max with an overlay of the former Shell station. (This site plan has disappeared from the job)

12-29-99

Parcel of Cambria sand monitoring well
will be installed the 3rd or 4th week
of Jan.

5-22-2000

Went to site to verify M.W. has been
installed - did not see one where
it was shown ~~of~~ on workplan map.

7-2-98 Informed Paul Waite of Cambria that I will write a letter to okay construction on the site with any restrictions after I get and review ^{budget} plans from the property owner.

3-12-98 Paul Waite will have either Shell or the property owner contact me concerning the letter they are requesting. I told him I want something in writing what they plan on doing with the property before I write my letter. Waite may also schedule a meeting for next week to discuss this matter. Paul will send out unauthorized release form next week.

Contact Log (2160 Otis Drive)

7/30/97

Called Tracy Lusk, Paradise, (510) 614-8390, to find out status of tank removal. They are currently awaiting demolition permits from the city. The tanks have been inactive for only the last week.

7/31/97

Paul Waite, Cambridge, called to say that they will be characterizing soil around inactive tanks prior to the tank removals, using geoprobes, to pre-characterize the soil for disposal.
