**Subject:** RE: Former 76 Station No. 7124 - Status of Proposed Work

Hi Barbara,

Thank you for the quick response. I do understand the closure reviews you are under.

At this point we will move forward with the work proposed due to the high levels indicated and keep you advised on timing etc.

Thanks

Terry L. Grayson

Dear Terry and Ben,

I am sorry but my work on the Regional Board's closure reviews and closures themselves has precluded me from reviewing your work plan in the usual 60 days. If you decide to implement your work plan, you would be doing so without concurrence from ACEH. If no comments arise from the review of the work plan, then proceeding with the work would not appear to have any significant repercussions. However, if comments to the work plan are identified, modifications to the fieldwork may be necessary, which may require additional mobilizations and /or additional sample analyses, etc. Please note that the UST Cleanup Fund typically reimburses costs for a scope of work that has been approved by a regulatory agency. Since a review of the work plan addendum cannot be completed in the time frame allotted and if the scope of work is implemented prior to regulatory approval, the UST Cleanup Fund may not fully reimburse all costs associated with the proposed scope of work or remobilizations. Please contact the UST Cleanup Fund to address cost reimbursement concerns.

Regards,

Barbara Jakub, P.G.

**Subject:** FW: Former 76 Station No. 7124 - Status of Proposed Work

Hi Barbara,

I know you are buried and may not get to "general" work plans till August as we have discussed in the past but I believe this site RO # 02444 located at 10151 International Blvd, in Oakland due to the grab sample in SB-4 at 45,000 ug/l needs some attention quickly. Since the work plan was sent back in July could we just acknowledge acceptance since well past the 60 day and move forward with the planned/proposed pilot testing?

Your review and consideration/approval of this request is greatly appreciated.

Respectfully,

Terry L. Grayson

Terry - I wanted to remind you that we have yet to receive a response from ACEHS regarding the work proposed in our July 20, 2009 *Work Plan for Additional Assessment and Remediation Pilot Testing*. With the TPHg concentrations observed in the grab sample collected from SB-4 (45,000 ug/L) and the depth to water (less than 20 feet), the shallow soil gas sampling really should be done to evaluate the potential for vapor intrusion into the adjacent building.
