**Re: Notification of Environmental Activities**  
Former 76 Station #07124  
10151 International Blvd.  
Oakland, California

To Whom It May Concern:

At the request of ConocoPhillips, Stantec Consulting Corporation (Stantec), formerly SECOR International Incorporated, is notifying you of upcoming environmental field work for the above-referenced station. Field work will involve locating utilities, and direct-push drilling activities. No permanent monitoring wells are being installed during this phase of site assessment.

Rinsate water generated during drilling activities will be stored in 55-gallon metal drums at the facility, pending characterization for proper disposal. Upon receipt of laboratory analytical results of the soil, Stantec will coordinate for the disposal of the rinsate water. Stantec anticipates the rinsate water will be on site for approximately 4 weeks after the completion of field work.

Stantec and its subcontractors will make every effort to minimize disruption to all parties involved while on- and off-site. Stantec appreciates your cooperation to ensure that field work occurs safely and efficiently. The proposed field activities are scheduled to occur on **August 26, 2008**, and **September 3 and 4, 2008** starting at **9:00 AM**. We anticipate that the utility locating will be completed in one day, and that the field work will be completed in approximately two days.

Please call me at (916) 861-0400 ext 289 with any questions regarding the upcoming field work.

Sincerely,

**Stantec Consulting Corporation**

Benjamin Chevlen, P.G.  
Associate Geologist
