

415-771-0798. He said the impacted soil in the parts storage shed has been excavated and is stockpiled on-site. He was to backfill the excavation and put a concrete pad over the area at the suggestion of Paul Smith in the Storm Water Program.

I recommended to Seelo that he hire ~~an~~ an environmental consultant to design a sampling plan for sampling the excavation and stockpile soil. Pending the sampling results, the excavation can be backfilled, or more excavation maybe required.

11-22-00

Spoke to Abbey Goldstein^c, a consultant who was contacted by Seelo to prepare a sampling plan.

12-12-00

Met with Abbie Goldstein with Sigma Prime Geosciences Inc. He will submit a workplan that will include sampling of the two stockpile of soil and the former storage area. Sampling method will be the requirements of the Superfund site. The stockpile of soil will be sampled separately. The stockpile soil will be tested for the full range of contaminants normally found in a auto repair shop.
