HYDRAULIC LIFT EXCAVATION REPORT

OAKLAND GENERAL TIRE  
1201 14<sup>th</sup> Avenue, Oakland, California  
October 16, 1998

## 1.0 INTRODUCTION

Jonas and Associates Inc. (J&A) has been retained by Continental General Tire, Inc. (General Tire) to excavate and remove hydraulic lifts and reservoirs from their property located at 1201 14<sup>th</sup> Avenue, in Oakland, California 94606. This report presents a summary of field activities and laboratory analytical results.

General Tire's environmental representative for this project is Mr. Mike McNally {(704) 583-8561}. The lead agency for this project is the Alameda County Health Care Services Agency, Department of Environmental Health, Hazardous Division (Alameda County Health Services). The address of Alameda County Health Services is 1131 Harbor Bay Parkway, 2nd Floor, Alameda, California 94502. The agency representative is Ms. Madhulla Logan {(510) 567-6764}.

### 1.1 Site Description

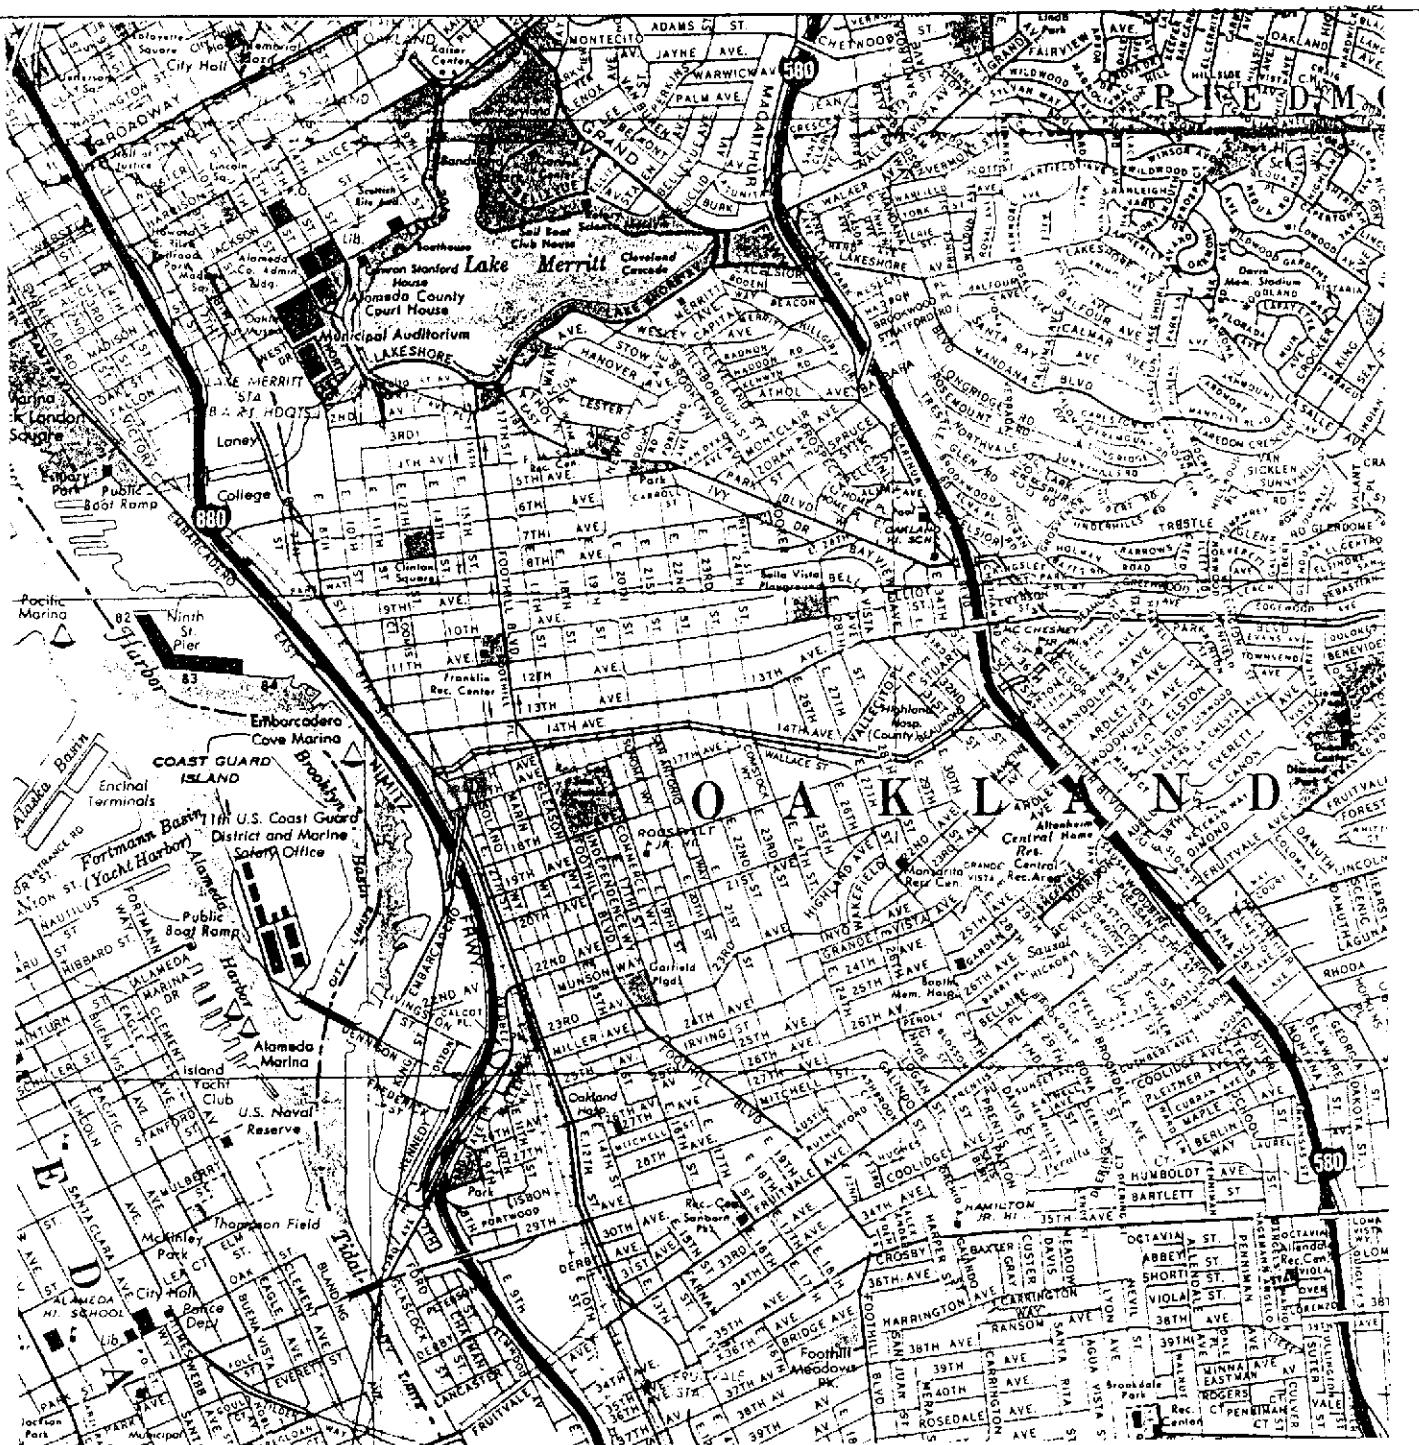

The Oakland General Tire facility presented in this report is located at 1201 14<sup>th</sup> Avenue, in Oakland, California, in the County of Alameda. Prior to 1991, General Tire had an active facility at this location. The facility was primarily associated with tire sales and installation, with some minor auto repair. Currently, this property is for sell and is vacant.

On the property is a single story, irregularly shaped building of approximately 9,400 square feet. It was built in 1960 and is situated along the north edge of a triangular shaped lot with dimensions of approximately 126' by 248' by 279'. Adjacent to the Oakland General Tire property is Style Center Cleaners, located at 1353 East 14<sup>th</sup> Street. Style Center Cleaners is an active facility and may be contributing to local groundwater contamination.

Across 14<sup>th</sup> Avenue and to the south is a restaurant located in what appears to have been a gas station. To the west are railroad tracks and the Nimitz Freeway. Beyond the Nimitz Freeway is the Port of Oakland. To the east and on the corner of East 12<sup>th</sup> Street and 14<sup>th</sup> Avenue is Armstrong Tire, which appears to operate a business similar to General Tire, Inc. Figure 1-1 presents the regional location of the Oakland General Tire facility.

## 2.0 FIELD ACTIVITIES AND RESULTS

This section discusses the relevant structures located at the facility prior to the excavation activities; scope of work; excavation activities performed, and analytical results.

### 2.1 Relevant Structures at the Facility Prior to Field Activities

Prior to the recent (1998) field activities, eight hydraulic lifts, three hydraulic oil reservoirs and one alignment pit were located at the service area of the facility. Figure 2-1 presents the layout of the facility and the hydraulic lifts locations. Figures 2-2a and 2-2b show schematic diagrams of the hydraulic lifts and the hydraulic oil reservoirs. A general description of the above structures is presented below:

- Eight hydraulic lifts: four single (A1, A2, D1 and D2) and four heavy (B1, B2, C1, and C2) used for trucks (see Figures 2-2a and 2-2b). Two of the heavy hydraulic lifts (B1 and B2) were located inside two basins (sumps). Each basin is constructed of concrete walls. The bottom of the basins opens into the underlying soil (no concrete bottoms). *8 lift*
- Three approximately 18-gallon underground hydraulic oil reservoirs (E, R1 and R2). Two of the reservoirs (R1 and R2) were located inside the basins (one each) and one of the reservoirs (E) was located adjacent to the west wall of the building (See Figure 2-1). Reservoir E1 feeds hydraulic lifts D1 and D2. Reservoirs R1 and R2 feed the four heavy hydraulic lifts B1, B2, C1 and C2. Hydraulic lifts A1 and A2 were not connected to any of the reservoirs. *3 reser* *11*  
Hydraulic oil was manually placed into the lifts.
- One alignment pit with concrete walls and bottom. This pit was full of clear water with no oily sheen or odor. The roof of the adjacent room (storage area) has collapsed. The storage area opens into the service area where the alignment pit is located. It appears that the water in the pit may be associated with rainfall.

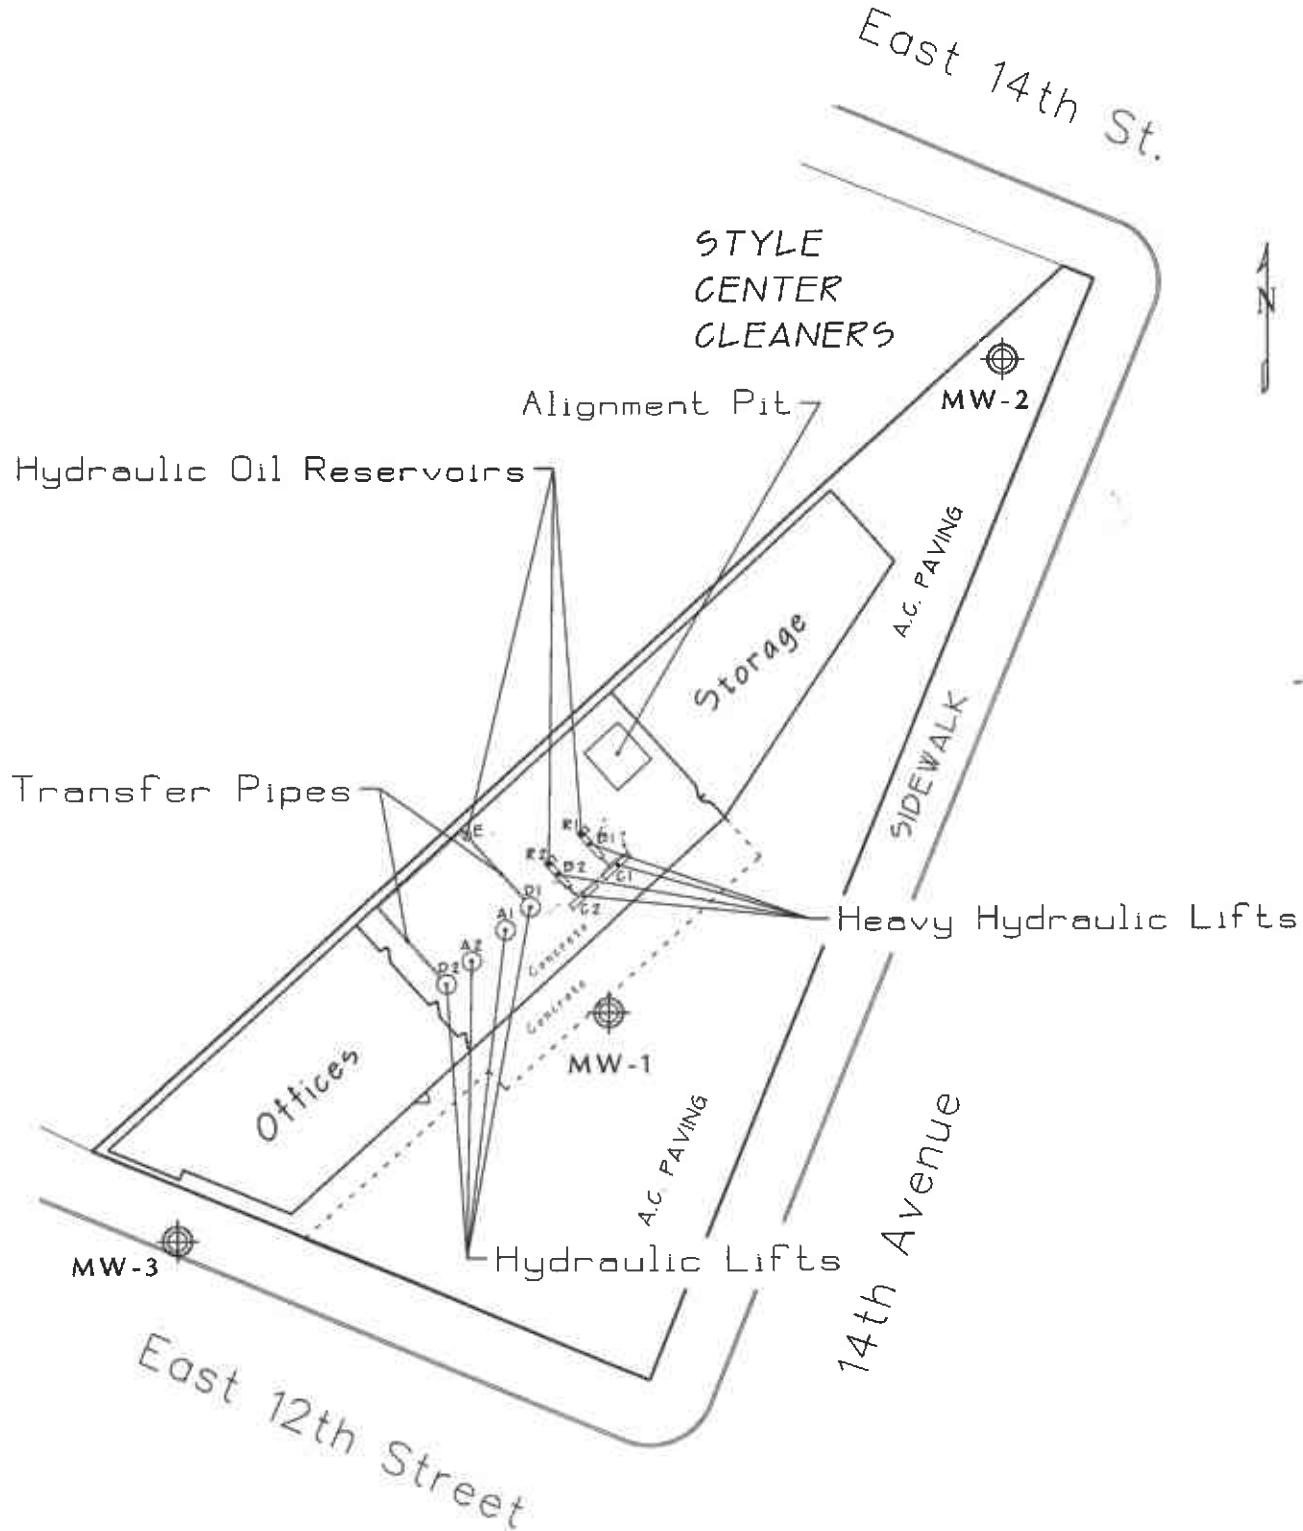

### 2.2 Scope of Work

J&A was requested by General Tire to remove the hydraulic lifts and hydraulic oil reservoirs. Specific tasks included:

- Preparation and submittal of a hydraulic lift removal work plan to the Alameda County Health Care Services (County).

- Excavation and removal of all the hydraulic lifts and the hydraulic oil reservoirs.
- Excavation and removal of the connecting (2-inch diameter) pipes between the oil reservoirs and the hydraulic lifts.
- Dewatering and excavation of the solid material from the hydraulic lift basins, and dewatering of the alignment pit.
- Collection and analysis of groundwater and soil samples.
- Preparation of a report for submission to the County.

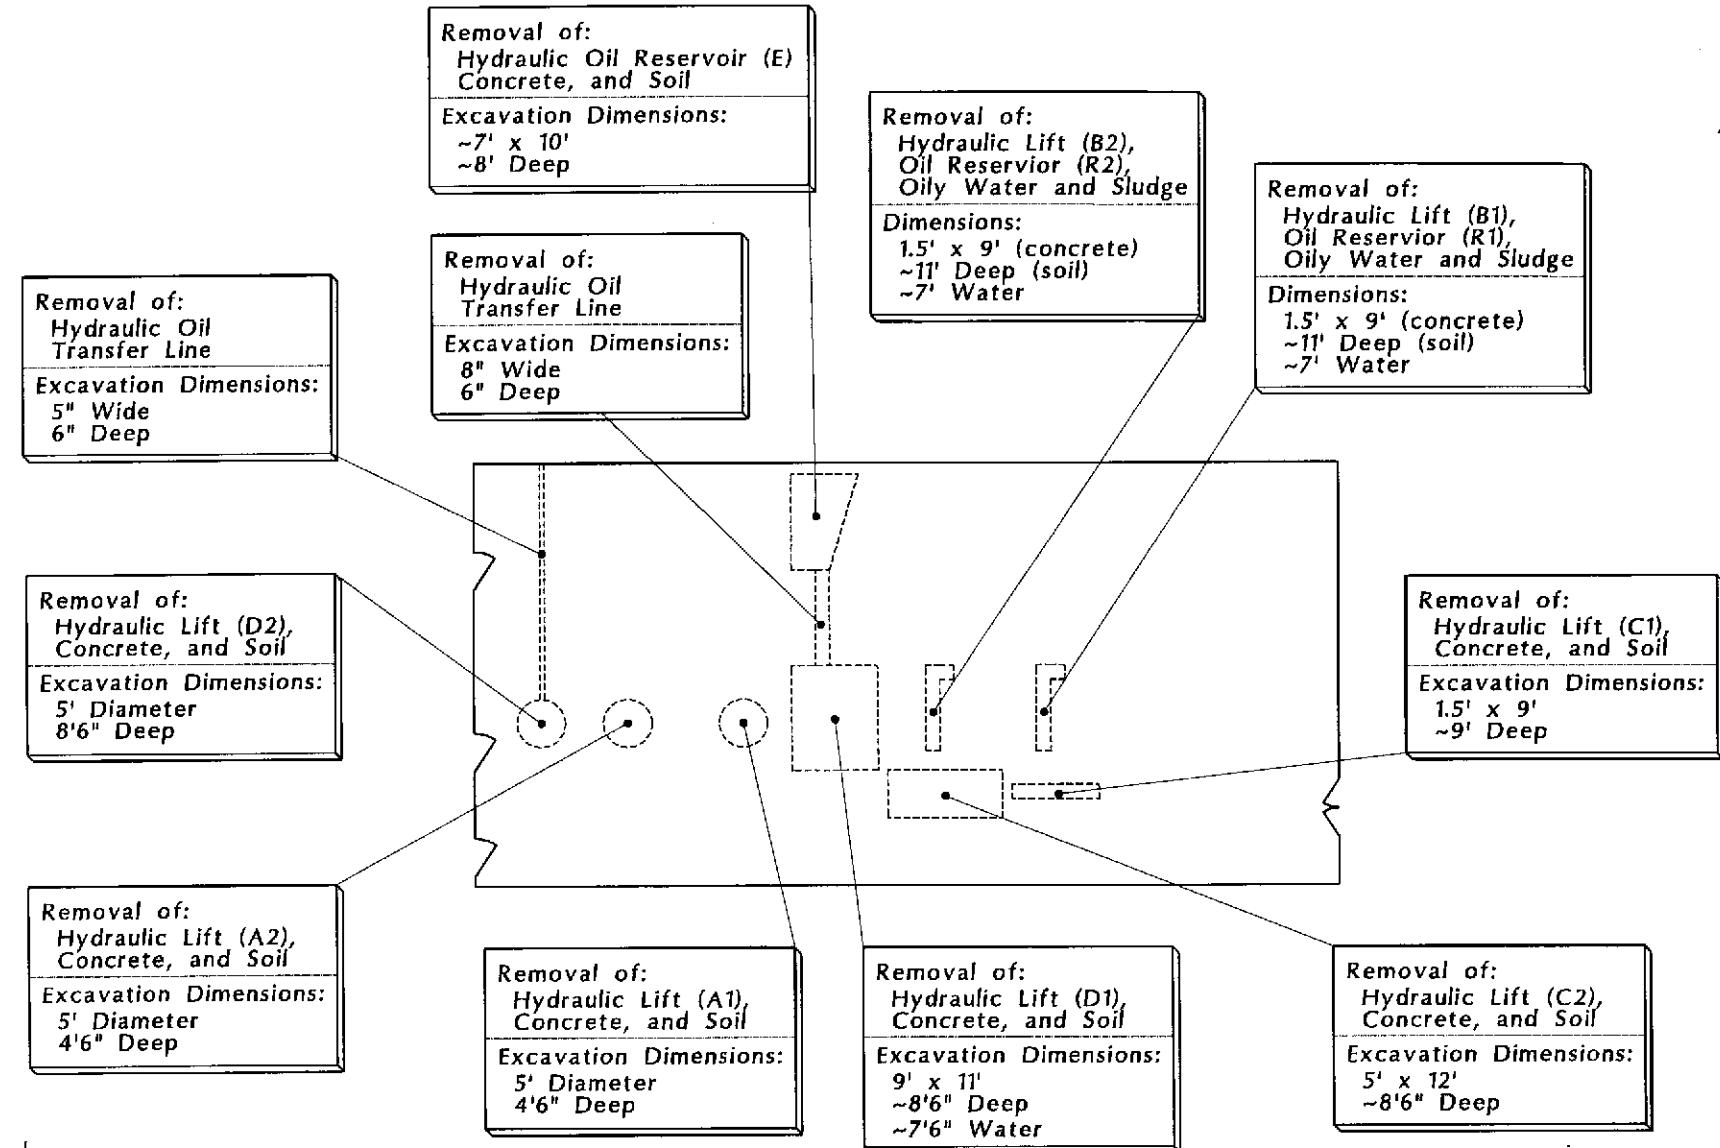

### 2.3 Field Activities

On June 24, 1998 "Workplan for Removal of Hydraulic Hoists" was prepared and submitted to Ms. Madhulla Logan of the County. In August of 1998, the workplan was approved by Ms. Logan. From June 1998 through October 1998 the following tasks were performed:

- Liquid accumulated in the two hydraulic lift basins was pumped out and placed in 55-gallon steel drums. At a later time, the water portion of the drums was pumped and treated/disposed off-site by Integrated Waste Management Inc. (IWM).
- Water from the alignment pit was pumped and transported off-site for treatment/disposal by IWM.
- The concrete around the hydraulic lifts was cut.
- Four single (A1, A2, D1 and D2) and four heavy (B1, B2, C1, and C2) hydraulic lifts and three hydraulic oil reservoirs (E, R1 and R2) were excavated. No holes were observed in the hydraulic lifts and in the hydraulic oil reservoirs.
- The pipes connecting the hydraulic oil reservoirs to the hydraulic lifts were removed.
- The hydraulic lifts and the hydraulic oil reservoirs were cut and drained of oil and the hydraulic oil was placed in 55-gallon steel drums. Later the hydraulic lifts were transported to metal recycling facilities.

- Soil around the hydraulic lifts was excavated. Figure 2-3 presents the dimensions of the excavated areas.
- On September 2-3, 1998 nine soil samples were collected from the bottom of the excavation pits. The samples were retrieved via a backhoe. These samples were analyzed by ChromaLab, Inc., for the following parameters:
  - » Total Extractable Petroleum Hydrocarbons as diesel, kerosene, and motor oil (TEPH-d,k,mo): EPA Method 8015M.
  - » Total Petroleum Hydrocarbon as Gasoline: Method 8015Mod.
  - » Polynuclear Aromatic Hydrocarbons (PAHs): SW846 Method 8270A Nov. 1990.
  - » Miscellaneous Metals: EPA Methods 3010A/3050A/6010A Nov. 1990 (LUFT Metals).
  - » Volatile Organics by GC/MS: SW846 Method 8260A Sept. 1994.
- On September 2, 1998 two water samples were collected from the two heavy hydraulic lift basins. The liquid samples were analyzed for the same parameters as the soil samples.  
*1100 mistake*
- Since the soil samples collected from the excavation pits of the hydraulic lifts "C2", "D1", and hydraulic reservoir "E," detected greater than 2,000 mg/kg of motor oil, General Tire decided to over-excavate in these areas. On October 5, 1998 these areas were over-excavated by J&A. The excavation did not exceed the depth to groundwater.
- After over-excavation, one soil sample was collected from each of the areas. The samples were analyzed for TEPH-d,k,m, and LUFT metals.
- On October 13, 1998 one groundwater sample was collected from each of the three existing groundwater wells located at the facility. The purpose of these samples was to determine presence and/or the absence of the petroleum hydrocarbons previously detected in the soil samples collected from the excavation pits.

### 3.0 ANALYTICAL RESULTS

Analytical results for the twelve soil, two water, and three groundwater samples are presented below.

#### 3.1 Soil Sample Results

Petroleum hydrocarbons (12 mg/kg to 3300 mg/kg), heavy metals (1.7 mg/kg to 300 mg/kg), and volatile organics (0.014 mg/kg to 0.11 mg/kg) have been detected in the soil samples collected from the excavation pits.

Table 3-1 in Appendix A is a summary of detected parameters in the soil samples collected on September 2-3, 1998. Table 3-2 presents a summary of detected parameters in the soil samples collected on October 5, 1998. Figure 3-1 presents sample numbers and locations and a list of analyses performed. Appendix B contains laboratory analytical reports for the soil samples.

#### 3.2 Water Sample Results

Petroleum hydrocarbons (32 mg/l to 5200 mg/l), Naphthalene (0.017 mg/l), and heavy metals (0.0081 mg/l to 1.2 mg/l) have been detected in the water samples collected from the hydraulic lift basins.

Table 3-3 is a summary of detected parameters in the water samples collected on September 2, 1998. Figure 3-2 presents sample locations and detected analytes. Appendix C contains laboratory analytical reports for the water samples.

Petroleum hydrocarbon in the diesel range (0.14 mg/l) has been detected in the groundwater monitoring well GT3-MW1. Table 3-4 presents the analytical results for the groundwater samples.

Figure 3-3 presents groundwater monitoring well locations and time-series of groundwater results. Depth to groundwater measured on October 13, 1998 ranged from 8.4 feet below ground surface (bgs) to 9.5 feet bgs.

#### 4.0 CONCLUSION AND RECOMMENDATION

Elevated concentrations of TEPH-Diesel and TEPH-Motor Oil were detected in soil and water sampled from the excavations. Several metals, and a few volatiles and semi-volatiles were also detected.

TEPH-Diesel was detected only in the groundwater monitoring well MW-1. It appears that the contaminant plume is slow moving and may be contained on-site.

Currently there are nine excavation pits at the facility. Further excavation of the unsaturated soil would probably not significantly aid in controlling the possible source area. Therefore, General Tire requests permission to backfill the excavation pits and perform semi-annual groundwater monitoring for TEPH-d,k,m.

Jonas & Associates Inc.
