

10/13/93

meeting re: PAECAR

Eric S., Pat Lynch - Herb Cronser

Raymond Elliot - Paecar

Eric or Brian at site tomorrow looking for fuel lines

meeting discussing my Sept 29, 1993 letter.

Agreed to assist PAECAR in ~~the~~ gaining site access to adjacent sites (upgradient) to locate a possible source of chlorinated contamination.

It was agreed that we would separate the Super Tire case from the ~~Non-consultants~~ ~~agreed to~~ ~~segr~~ Grand Auto. The client PAECAR is hoping to get sign off for the Super Tire facility.

Prior to sign off a formal request with explanation of the metals solubility issue ~~was~~ will be prepared when the monitoring well HC-1 was installed total lead values (collected next to ~~BC-1~~ ^{which} indicated 60 ppm) did not indicate values which exceeded ^{the} ten times the allowable site value. However chromium was not analyzed for when installing HC-1. Analysis of boring H-2 associated with the former hoist indicated a Cr level of 75 ppm but ~~the~~ when HC-1 was installed Cr was not analyzed.

will do paper search re chlorinated solvents & neighbors then depending on results will submit a workplan.

Agreed to a

~~is~~ Is currently digging at site to determine the locations of former piping at Super Tire facility.
