**Subject: Transmittal of Semi-Annual Groundwater Monitoring Report
TOXIC Case No. R02492 Ninth Avenue Terminal**

Dear Mr. Chan:

As required by your July 22, 2004 letter, enclosed please find the Port of Oakland's semi-annual groundwater monitoring report for the Ninth Avenue Terminal prepared by Fugro West, Inc. This report documents recent groundwater monitoring results from SCIMW-7 (two quarterly events) and SCIMW-24 (one semi-annual event).

If you have any questions, contact me at 510-627-1467.

Sincerely,

Diane Heinze, P.E.
Associate Port Environmental Scientist

Attention: Ms. Diane Heinze

Subject: Groundwater Monitoring Program Report, Winter 2005 Quarterly Event and Spring
2005 Semi-Annual Event
Ninth Avenue Terminal, Oakland, California

Dear Ms. Heinze:

With this report, Fugro West, Inc., (Fugro) presents the results of the quarterly and semi-annual groundwater monitoring events conducted during the winter and spring of 2005 at the Ninth Avenue Terminal (Site). The location of the Site is shown on Plate 1. Previous investigations indicate that petroleum hydrocarbons, as well as other chemicals have impacted soil and groundwater at the Site. Groundwater monitoring has been performed at the Site since 1993.

MONITORING ACTIVITIES

The current groundwater monitoring program, as approved by the Alameda County Environmental Health Care Services Agency (ACEH) in their letter dated July 22, 2004, (Appendix A) is outlined in the attached Table 1. In general, water levels are to be measured in all existing wells on an annual basis and selected wells are to be checked for the presence of free-floating product. The majority of wells are to be sampled and analytically tested on an annual basis, one well is sampled quarterly (SCIMW-7) and one well is sampled semi-annually (SCIMW-24).

The quarterly event commenced on January 10, 2005, with the groundwater level measurement and sampling of well SCIMW-7. The semi-annual event commenced on April 12, 2005. During the semi-annual event wells SCIMW-7 and SCIMW-24 were sampled. Depth to water in all active wells was also measured during the semi-annual event to determine if free product levels changed relative to the fall 2004 annual monitoring event. Groundwater level measurements were obtained from the tidally influenced wells¹ first, to minimize any potential discrepancies in elevation between wells across the Site. A summary of the groundwater

¹ Wells located along the Clinton and Brooklyn Basin shorelines have shown that they are tidally influenced.

elevation measurements is presented in Table 2. Groundwater contours for the semi-annual event are shown on Plate 2.

Free product was observed in well MW-4 (9 inches), well SCIMW-24 (trace), and the "oil filled" manhole (trace) during the 2005 semi-annual event. It is Fugro's field protocol to immediately remove free product when observed during an event. Fugro personnel used a disposable bailer to remove approximately 1.5 gallons of a water and free product mixture during the 2005 event. The mixture was placed in a 55-gallon drum and temporarily stored on-site pending removal by a port contractor.

Well SCIMW-7 was purged and sampled using a disposable bailer during the quarterly event and wells SCIMW-7 and SCIMW-24 were purged and sampled using disposable bailers during the semi-annual event. Fugro placed the water generated during purging into a 55-gallon drum, which was then temporarily stored onsite pending removal by a port contractor. The bailers were discarded after each use. The pH, temperature, Eh², TDS³, and DO⁴ measurements were recorded during purging. The wells were not considered purged until these environmental parameters had become reasonably stabilized. A Well Sampling Form was completed for each well sampled during the events. Well Sampling Forms are included in Appendix B.

Groundwater samples were obtained once the wells recharged to approximately 80 percent of the initial well volume. Samples were retained in pre-cleaned laboratory-supplied glass and polyethylene containers in accordance with EPA protocol. The sample containers were then placed into cooled chests and remained iced until delivery to the analytical laboratory under chain of custody.

ANALYTICAL TESTING PROGRAM AND RESULTS

Curtis & Tompkins, Ltd., (C&T) a State of California Department of Health Services certified analytical laboratory, conducted the chemical testing for the events described herein in accordance with the testing program (Table 1). C&T has conducted all previous analytical services in conjunction with Fugro's studies at the Site. Comprehensive groundwater analytical test results are presented in Tables 3 through 9. Petroleum hydrocarbon, chlorinated pesticide, and VOC concentrations for the events described herein are shown on Plates 3 and 4 as applicable for wells SCIMW-7 and SCIMW-24. Analytical test reports, chromatographs and chain-of-custody forms for are included in Appendix C. Specific test results are discussed in the sections below.

² Eh = Redox potential or oxidizing-reduction potential

³ TDS = Total Dissolved Solids

⁴ DO = dissolved oxygen. Initial DO readings were recorded down-hole.

CHEMICAL DATA

January 2005 Quarterly Event - Chemical Results in SCIMW-7

- TVH as gasoline range was detected at 160 parts per billion (ppb).
- TEH as diesel range was not detected.
- TEH as motor oil range was not detected.
- The sample contained 72 ppb of benzene, 1.2 ppb of ethylbenzene, 15 ppb of toluene, and 8.2 ppb of xylenes.
- MTBE⁵ was not detected.
- Chlorinated pesticide analysis detected 0.6 ppb 4-4'-DDD. C&T commented that high _____ (ICAL) percent relative standard deviation (RSD) was observed for 4-4'-DDT in the calibration analyzed 1/19/05 05:35; average ICAL %RSD met method requirements, and affected data was qualified with "b". No other analytical problems were encountered.
- The following VOCs were detected: 100 ppb of chloroethane, 290 ppb of 1,1 dichloroethane, 260 ppb of cis-1,2 dichloroethene, 52 ppb of 1,1,1-trichloroethane, 37 ppb of trichloroethane, and 390 ppb of vinyl chloride.

April 2005 Semi-Annual Event - Chemical Results in SCIMW-7 and SCIMW-24

- TVH as gasoline range was detected at 7,800 ppb (SCIMW-7) and 14,000 ppb (SCIMW-24). C&T commented that sample SCIMW-24 exhibits an unknown single peak or peaks.
- TEH as diesel range was detected at 260 ppb (SCIMW-7) and 4,600 ppb (SCIMW-24). C&T commented that samples from SCIMW-7 and SCIMW-24 exhibit a chromatographic pattern which does not resemble standard and that lighter hydrocarbons contributed to the quantitation. In SCIMW-24 heavier hydrocarbons also contributed to the quantitation.
- TEH as motor oil range was not detected in well SCIMW-7. TEH as motor oil range was detected in well SCIMW-24 at 4,600 ppb. C&T commented that lighter hydrocarbons contributed to the quantitation.
- The sample from well SCIMW-7 contained 1,800 ppb of benzene and 1,200 ppb of toluene. The sample from well SCIMW-24 contained 3,000 ppb of benzene, 81 ppb of ethylbenzene, 64 ppb of toluene, and 73.3 ppb of xylenes.
- MTBE⁶ was not detected in wells SCIMW-7 and SCIMW-24.

⁵ Method 8260B was used to analyze for MTBE, with a detection limit of 20 ppb.

- Chlorinated pesticide analysis was conducted on the sample collected from well SCIMW-7. Analyses detected 1.0 ppb 4-4'-DDD. C&T commented that the sample Continuing Calibration Verification standard (CCV) drifted outside limits; however, average CCV drift was within limits per method requirements. C&T also indicated that high ICAL percent RSD was observed for 4-4'-DDT in the calibration analyzed 4/20/05 15:57; average ICAL %RSD met method requirements, and affected data was qualified with "b". Low surrogate recovery was observed for decachlorobiphenyl in SCIMW-7 (lab # 178873-001). No other analytical problems were encountered.
- Well SCIMW-7 contained concentrations of the following VOCs: chloroethane (1,800 ppb), 1,1 dichloroethane (12,000 ppb), cis-1,2 dichloroethene (19,000 ppb), trans-1,2-dichloroethene (210 ppb), 1,1,1-trichloroethane (1,700 ppb), 1,1 dichloroethene (230 ppb), chloroform (200 ppb), and vinyl chloride (3,100 ppb).

Tables 5, 7, 8, and 9 include historic data for metals, SVOCs, PNAs, and water quality ions, respectively. No samples were analyzed for these compounds/ions during the first two quarters of 2005, and no further testing of these analytes is included in the ongoing groundwater program. This data is presented herein to keep the historical analytical data for the Site intact.

GROUNDWATER QUALITY PARAMETER DATA

Table 6 presents groundwater quality parameter test results of samples from selected wells. Field measurements of pH, TDS, DO, Eh, and temperature are included in the table.

January 2005 Quarterly Event - Groundwater Quality Parameter Results

The initial down-hole pH reading for the quarterly event was 8.01 in well SCIMW-7. This reading is higher when compared to the reading obtained during the previous event (6.04, October 2004).

The initial down-hole TDS reading for the quarterly event was 14,370 milligrams per liter (mg/l) in well SCIMW-7. This TDS reading is lower than during the previous event (20,360 mg/l, October 2004) and events.

The initial down-hole DO reading for the quarterly event was 2.54 mg/l in well SCIMW-7. The DO reading for this event was higher than during the previous event (2.17 mg/l, October 2004).

The initial down-hole Eh reading for the quarterly event was -131.9 mV in well SCIMW-7. This Eh reading is higher than during the previous event (-228.1 mV, October 2004).

⁶ Method 8260B was used to analyze for MTBE, with a detection limit of 0.5 ppb (SCIMW-24) and 170 ppb (SCIMW-7).

The initial down-hole temperature reading for the quarterly event was 18.55 °C in well SCIMW-7. The temperature reading in this well was lower than during the previous event (20.28°C, October 2004).

April 2005 Semi-Annual - Groundwater Quality Parameter Results

Initial down-hole pH readings for the semi-annual event were 3.92 (SCIMW-7) and 4.32 (SCIMW-24). The readings for the semi-annual event are lower when compared to readings across the Site and to readings recorded over time.

Initial down-hole TDS readings for the semi-annual event were 10,780 mg/l (SCIMW-7) and 1,083 mg/L (SCIMW-24). The TDS readings are lower than during the previous events (January 2005 for SCIMW-7 and October 2004 for SCIMW-24).

Initial down-hole DO readings for the semi-annual event were 2.34 mg/L (SCIMW-7) and 0.68 mg/L (SCIMW-24). The DO readings are lower than during the previous events (January 2005 for SCIMW-7 and October 2004 for SCIMW-24). This may be associated with less surface runoff infiltrating into the shallow groundwater.

Initial down-hole Eh readings for the semi-annual event were -49.3 mV (SCIMW-7) and -117.1 mV (SCIMW-24). The Eh reading of well SCIMW-7 was higher than during the previous event (January 2005) and the Eh reading for SCIMW-24 appeared similar to the previous event (October 2004).

Initial down-hole temperature readings for the semi-annual event were 16.38°C (SCIMW-7) and 19.14°C (SCIMW-24). The temperature readings are lower than during the previous event (January 2005 for SCIMW-7 and October 2004 for SCIMW-24).

WASTE DISPOSAL ACTIVITIES

On January 11, 2005, one drum containing purge water from well SCIMW-7 and an oil/water mixture found in a 5-gallon bucket left adjacent to SCIMW-7 was removed from the Site. One drum containing purge water and product from the semi-annual groundwater monitoring activities was also removed. The drums were transported under a Uniform Hazardous Waste Manifest to an appropriate disposal facility. A copy of the January 2005 manifest is included in Appendix D.

GEOTRACKER

Electronic data for SCIMW-24 was successfully uploaded to the Geotracker database on May 12, 2005, for the associated UST site at H-204.

ONGOING MONITORING

In accordance with the approved program, the next sampling event will be quarterly sampling of well SCIMW-7 scheduled for July 2005. During this event, sampling and analytical

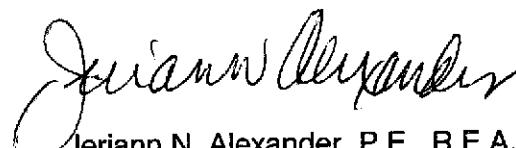

testing will be performed, as outlined in Table 1. Results of the quarterly event will be held and presented with the October 2005 annual monitoring report.

If you have any questions, please call either of the undersigned at (510) 268-0461.

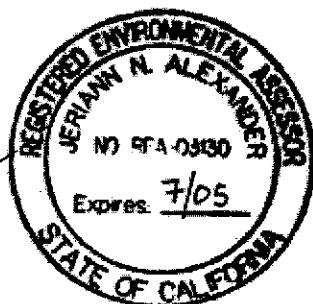

Sincerely,

Notes:

TVH = Total Volatile Hydrocarbons

TEH = Total Extractable Hydrocarbons

DDD = Dichlorodiphenyldichloroethane

DDE = Dichlorodiphenyldichloroethene

DDT = Dichlorodiphenyltrichloroethene

PCBs = Polychlorinated Biphenyls

— = Not tested

ND = Not detected

<50 = Comp. not detected at or above stated reporting limit

*** = Also detected 0.08ug/L Heptachlor epoxide B

(a) Additional sample was collected on Dec 28, 1998 for the TEH analysis.

(b) These wells contained free product at time of sampling.

Fugro West, Inc. (Fugro) acquired the assets of Subsurface Consultants, Inc. (SCI) in September 2001.

$\mu\text{g/L}$ = micrograms per liter or parts per billion

y = Sample exhibits fuel pattern which does not resemble std

h = heavier hydrocarbons than indicated standard

l = lighter hydrocarbons than indicated standard

z = Sample exhibits unknown single peak or peaks

J = estimated value

NR = Groundwater elevation was not recorded

endo=Endosulfan II

= CCV drift outside limits, average CCV drift within limits per method requirements

+ = Groundwater level may not be stabilized

Groundwater measurements presented are those collected on the first day of

sampling for the event and may not be the same as the date sampled.

* = Well was inaccessible on the first day of sampling, the groundwater elevation presented was obtained on the day that the well was actually sampled and is not shown on Table 2.

* = BTEX and MTBE presented in Table 4

MEK = Methylketone

$\mu\text{g/L}$ = micrograms per liter or parts per billion

<10 = Compound not detected at or above stated reporting limit

a = 370 $\mu\text{g/L}$ of cis-1,3-Dichloropropene and 2.9 $\mu\text{g/L}$ of tetrachloroethene detected

b = 2.4 $\mu\text{g/L}$ of Isopropylbenzene, 1.6 $\mu\text{g/L}$ of 1,2,4 - Trimethylbenzene,

2.2 $\mu\text{g/L}$ of 1,4 Dichlorobenzene, 3.1 $\mu\text{g/L}$ of Dichlorobenzene, and 1.4 $\mu\text{g/L}$ of Naphthalene

c = 1.8 $\mu\text{g/L}$ of Isopropylbenzene, 1.5 $\mu\text{g/L}$ of 1,2,4-Trimethylbenzene,

1.4 $\mu\text{g/L}$ of 1,4-Dichlorobenzene, 2.1 $\mu\text{g/L}$ of 1,2-Dichlorobenzene, and 1.4 $\mu\text{g/L}$ of Naphthalene

d = 150 $\mu\text{g/L}$ of Trichlorofluoromethane

e = 200 $\mu\text{g/L}$ chloroform

Fugro West, Inc. (Fugro) acquired the assets of Subsurface Consultants, Inc. (SCI) in September 2001.

ND = Not detected

J = Estimated value

+ = Groundwater level may not be stabilized

Groundwater measurements presented are those collected on the first day of sampling for the event and may not be the same as the date sampled.

* = Well was inaccessible on the first day of sampling, the groundwater elevation presented was obtained on the day that the well was actually sampled and is not shown on Table 2.

TABLE 5
HEAVY METAL CONCENTRATIONS IN GROUNDWATER
NINTH AVENUE TERMINAL STUDY AREA

Note: During this sampling event only SCIMW-28 was sampled and analyzed for heavy metals.

µg/L = micrograms per liter or parts per billion

<60 = Compound not detected at or above stated reporting limit

Groundwater measurements presented are those collected on the first day of sampling

for the event and may not be the same as the date sampled.

* = Well was inaccessible on the first day of sampling, the groundwater elevation presented was obtained on the day that the well was actually sampled and is not shown on Table 2.

Fugro West, Inc. (Fugro) acquired the assets of Subsurface Consultants, Inc. (SCI) in September 2001.

-- = Not tested

+ = Groundwater level may not be stabilized

Notes:

Eh = Redox potential or oxidizing-reduction potential

TDS = Total Dissolved Solids

mV = millivolts

mg/L = milligrams per Liter

Groundwater elevation measurements presented are those collected on the first day of sampling for the event and may not be the same as the date sampled.

* = Well was inaccessible on the first day of sampling, the groundwater elevation presented was obtained on the day that the well was actually sampled and is not shown on Table 2.

Fugro West, Inc. (Fugro) acquired the assets of

Subsurface Consultants, Inc. (SCI) in September

July 22, 2004

Ms. Diane Heinze
Port of Oakland
PO Box 2064
Oakland, CA 94604-2064

Dear Ms. Heinze:

Subject: TOXIC Case No. RO2492 (and previous RO106, RO108, RO109, RO110, RO244, RO485) Port of Oakland / Ninth Avenue Terminal, 370 8th Avenue, Oakland, CA 94606

Alameda County Environmental Health (ACEH) staff has recently reviewed the case file for the subject site and the October 13, 2003 Port of Oakland letter proposing specific monitoring changes, well closures, LOP site closure and work plans. We have the following technical comments to this letter.

TECHNICAL COMMENTS

The Ninth Avenue Terminal site consists of Port of Oakland properties in the areas bordered by the Embarcadero, 7th Avenue, 10th Avenue and the Oakland-Alameda estuary. Impacted parcels and areas have been identified from authoritative sampling of UST areas, aboveground tank locations, subsurface utilities and former surface release and hazardous materials storage areas. ACEH has approved the investigations of the suspected impacted areas, however, heretofore, the Port and their consultants have directed investigations. The work was done to identify source areas related to past operations and storage of hazardous materials. Initially, other sources were investigated to determine if they could have contributed to the historic release observed from the "Keep-On-Trucking" site. Most sites identified were determined not to have contributed to this historic release. However, the Port identified additional RPs as owners and/or operators of USTs in locations where petroleum contamination had been detected. Those sites associated with the USTs were put into ACEH LOP. Apparently, the Port has settled responsibility issues with these RPs, since it has accepted primary RP status for the entire site, collectively and commonly known as the Ninth Ave. Terminal. Although some of the sites have been investigated more than others, much of the investigation was performed treating the multiple sites using a regional site-wide approach. Remediation has consisted solely of free product removal from areas where it has collected, i.e. manholes and wells, and USTs and soil removal.

The Port requested, in their July 29, 2003 letter, that work at the entire site be suspended until the close of escrow with Oakland Harbor Partners (OHP), projected to be between September 2005 and September 2007. The assumption was that OHP would develop a Regional Approach for the remediation of this site, which is part of the Oak to Ninth project encompassing approximately 62 acres. ACEH's September 11, 2003 letter stated we did not concur with this proposal since this would not be protective of human health and the environment, nor in compliance with environmental regulations. The Port's responded to ACEH's letter in their October 13, 2003, Ninth Avenue Terminal letter, which ACEH addresses below.

1. **Regional Case Approach** – ACEH has decided to combine all existing and all future release areas at this site into one site, which is consistent with the Regional Approach. This decision is based upon the following observations:

- Site information has previously been presented individually or consolidated into a site-wide monitoring report. Several of the LOP sites within the Ninth Ave. Terminal area have been proposed for no further action by the Port. Data is scattered among seven sites, six LOP and one TOXIC (SLIC). Consolidation of sites and data will allow for easier data presentation, review and interpretation. No further action can be given to specific tank locations while the other areas of concern continue to be investigated, with site closure as the ultimate objective.
- Cost apportionment has been completed between the Port and RPs and no other RPs are expected to be identified.
- Given the expected most conservative future residential use of the site, it makes sense to use a regional approach and consolidate all sites.
- Additional contamination is likely to be identified given the historic industrial site use and the presence of solvent contamination. Petroleum contamination has been identified in areas remote from known UST releases indicating the potential of additional surface releases. Contamination may be discovered during the demolition of buildings during development. Under the single site scenario, no new sites would need to be established.

As such, ACEH will consolidate Fuel Leak Case No. RO106, RO108, RO109, RO110, RO244, RO485 into one case, RO2492, named Port of Oakland / Ninth Avenue Terminal. A letter requesting additional fees for this account will follow.

2. **Work Plan Review** - Based upon the assumption that OHP would develop a regional approach, the Port suspended monitoring and proposed work plan activities. However delays in the sales has made this regional approach unpredictable. Several site-specific work plans have been submitted to ACEH, which the Port has recently committed to implement. ACEH will be providing comment on the submitted work plans addressing specific UST release areas. ACEH will also be requesting work plan(s) for additional site characterization of contaminants at this site.
3. **Plume Characterization** - The Port's October 13, 2003 letter states that groundwater impacts remain relatively consistent and plumes are stable, however, no specific data was provided to support this claim. In addition, most sites have not been completely characterized, therefore, it is not yet appropriate to discuss plume stability.
4. **Human Health and Ecological Risk Assessment** - A formal human health or environmental risk assessment has not been performed for the site; therefore, it is premature to suggest that the site currently poses minimal risk to human health and the environment. ACEH notes that a prior soil vapor study performed at the site identified numerous locations where soil vapor samples exceeded 10% of the LEL of methane, indicative of a potential hazardous condition.

5. **Comments to Technical Proposals** - The Port has made a number of proposals in reference to the investigation, remediation and monitoring of this site. ACEH has the following technical response to the proposed changes in monitoring and recommendations for UST investigation and closure.

a. **Monitoring and Well Decommissioning Recommendations**

MW #	Port of Oakland Proposal	County Comment/Rationale
MW-2	Discontinue TEHd, mo	KOT UST area. Perimeter well around FP. Continue annual TEHd, mo w/silica gel
MW-3	Discontinue BTEX, MTBE, Continue annual TEHd, mo	Concur
MW-4	Discontinue all analysis, remove FP annually	Bailing not sufficient, propose remediation method, analyze FP for TPHg, d, mo, BTEX and MTBE.
MW-5	Discontinue	KOT UST area. Perimeter well around FP. Continue annual TEHd, mo w/silica gel
MW-6	Discontinue	Bailing not sufficient, propose remediation method, analyze FP for TPHg, d, mo, BTEX and MTBE.
MW-7	Destroy well	Continue DTW annually, County will consider Port's closure request for no further work
SCIMW-1	Discontinue	Continue DTW annually
SCIMW-2	Annual TEHd, mo w/silica gel, discontinue metals	Concur, perimeter well, near former ASTs, historic TEHd, mo impact, up to 2001, currently 120 ppb diesel.
SCIMW-3	Continue annual TEHd, mo	Concur, down gradient of former AST farm
SCIMW-4	Water level readings only	Concur, up gradient perimeter well
SCIMW-6	Water level readings only	Concur, perimeter well, not impacted
SCIMW-7	TEHd, mo, VOCs, pesticides annually	Solvent, TPH, pesticides release. Sample qtrly for TPHg, BTEX, VOCs, TPHe, mo and pesticides. Area will require additional investigation & possible remediation, WP will be requested.
SCIMW-8	TEHd, mo w/silica gel annual	Concur, along bulkhead, TEHd, mo ND since 1998
SCIMW-9	Continue annual TEHd, mo	Concur, former AST area, up to 7000ppb TEHmo (1/2003)
SCIMW-10	Discontinue TEHd, mo	Concur, annual water elevation readings
SCIMW-11	TVH, BTEX, TEHd, mo SA to A	Concur, well down gradient of UST
SCIMW-13	Discontinue annual TEHd, mo	Well within former AST area with historic release, continue annual TEHd, mo
SCIMW-15	SA to A, TEHd, mo	Concur, well along bulkhead
SCIMW-16	Water level only	Concur, TEHd low to ND
SCIMW-18	Discontinue TEHd, mo	Concur, annual DTW level, down gradient of former ASTs, near storm drain
SCIMW-19	Water level only	Concur, up gradient perimeter well, TEHd, mo ND
SCIMW-21	Discontinue	Annual DTW level, outside of Bldg H-229, TEHd, mo ND since 1998
SCIMW-22	Discontinue	Solvent area well, run VOCs annually
SCIMW-23	Destroy well	Concur, well has low to ND TEHd, mo, and is at risk from potential surface releases due

Ms. Heinze
 July 22, 2004
 Page 4

SCIMW-24	BTEX, TVH and TEHd, mo SA to A	to no surfacing and high vehicle traffic Monitoring should remain as SA. Elevated concentrations present (1997-2003). Will review Port's 11/7/03 second phase investigation wp
SCIMW-26	Discontinue BTEX, MTBE, continue A TEHd, mo	Concur, but run TVH annually since it has been analyzed only once, well is up gradient & at perimeter of FP area.
SCIMW-28	Heavy metals SA to A	Concur, also run VOCs annually, well is near the solvent release area along RR track & down gradient of Lakeside Metal UST
SCIMW-29	Discontinue BTEX and MTBE	Concur, but run TEHd, mo annually, this well is near impacted well MW-6, in the KOT UST area.
SCIMW-30	Discontinue all analyses	Well was installed in VOC release area, monitor for VOCs annually
SCIMW-31D	VOCs SA to A	Concur, County will request additional invest. wp for the VOC release, including possible additional deep gw sampling
SCIMW-32	No monitoring proposed	Well is within the solvent release area, run VOCs annually, gradient appears radial
SCIMW-33	TEHd, mo, VOCs and pesticides annually	Concur, well is monitoring solvent release area
SCIMW-34	Discontinue BTEX, MTBE, TVH, PNAs and metals, TEHd, mo SA to A	Concur, also add TVH annually along with TEHd, mo, well was installed for the investigation of diesel and gasoline USTs, County to review 5/03 wp
SCIMW-35	Discontinuse BTEX and TVH	Analyze for TVH, BTEX and TPHd annually, monitoring is subject to results of future investigation, County to review 5/03 wp

b. UST Removal and Closure Status

Case #	UST Name	Bldg Location	Current Status	County Response
RO0000106	HF-03	H-107	Closure requested	County will review site for potential no further action
-----	HF-02	H-213	Port submitted wp, 5/2003	County will review wp
RO0000109	HF-12 & HF-13	H-211	11/02 wp approved, Port requests suspension, Bldg above UST occupied by OPD	Concur, Port should evaluate data and propose investigation of area outside of building.
RO0000108	HF-14 & HF-15	H-209	USTs closed-in-place, closure requested	County will review closure report and NFA request
RO0000485	HF-16	H-204	8/2003 invest report submitted to County, Port submitted 11/7/03 addnl s&gw wp	County will review 8/03 report and 11/7/03 wp

Ms. Heinze:
July 22, 2004
Page 5

	HF-17	H-227	8/2003 invest report submitted to County	County will review 8/03 report, provide comments & respond to request to put site invest on hold.
RO0000244	HF-19	H-314	Port submitted wp 5/03.	County will review 5/03 wp.
RO0000110	HF-20&HF-21	H-317	Port submitted wp 5/03.	County will review 5/03 wp.
RO0002492	Solvent release area, surface release areas, HF-02, HF-17	Entire site	SLIC case for entire 9 th Ave. Terminal site, wp and reports exist for USTs, HF-02 and HF-17	a specific wp request will be sent pertaining to the solvent release(s)

6. **Professional Registration Requirement** - It is noted that the Port has made specific observations and recommendations for this site in the October 13, 2003 Response Letter. The California Business and Professions Code (Sections 6735, 6835, and 7835.1) require that all work plans and technical reports containing professional geologic or engineering evaluations and/or judgments be completed under the direction of an appropriately registered or certified professional. This registered or certified professional shall sign and wet stamp all such reports and work plans. Therefore, please resubmit your response letter under your registered professional stamp.
7. **Perjury Statement** – All work plans, technical reports, or technical documents submitted to this office must be accompanied by a cover letter from the responsible party that states, at minimum, the following:

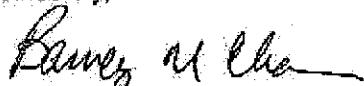

"I declare, under penalty of perjury, that the information and/or recommendations contained in the attached document or report is true to the best of my knowledge."

This letter must be signed by an officer or legally authorized representative of your organization. A review of our case files indicates that none of your reports were submitted with a perjury statement.

As previously mentioned, ACEH will be responding to investigation work plans and reports for each individual referenced site. We will also be responding to the Port recommendations to put some investigations on hold. At this time, we request that you proceed with groundwater monitoring according to the proposed County Response schedule.

Please contact me at (510) 567-6765 if you have any questions.

Sincerely,

Barney M. Chan
Hazardous Materials Specialist

CASE NARRATIVE

Laboratory number: 177066
Client: Fugro West, Inc.
Project: 133.023
Location: 9th Ave Terminal/POO (KOT)
Request Date: 01/10/05
Samples Received: 01/10/05

This hardcopy data package contains sample and QC results for one water sample, requested for the above referenced project on 01/10/05. The sample was received cold and intact.

TPH-Purgeables and/or BTXE by GC (EPA 8015B and EPA 8021B):
No analytical problems were encountered.

TPH-Extractables by GC (EPA 8015B):
No analytical problems were encountered.

Volatile Organics by GC/MS (EPA 8260B):
No analytical problems were encountered.

Pesticides (EPA 8081A):
High ICAL percent RSD (relative standard deviation) was observed for 4,4'-DDT in the calibration analyzed 01/19/05 05:35; average ICAL %RSD met method requirements, and affected data was qualified with "b". No other analytical problems were encountered.

CASE NARRATIVE

Laboratory number: 178873
Client: Fugro West, Inc.
Project: 133.023
Location: 9th Ave Terminal/POO (KOT)
Request Date: 04/13/05
Samples Received: 04/13/05

This hardcopy data package contains sample and QC results for two water samples, requested for the above referenced project on 04/13/05. The samples were received cold and intact.

TPH-Purgeables and/or BTXE by GC (EPA 8015B and EPA 8021B):

No analytical problems were encountered.

TPH-Extractables by GC (EPA 8015B):

No analytical problems were encountered.

Volatile Organics by GC/MS (EPA 8260B):

No analytical problems were encountered.

Pesticides (EPA 8081A):

High ICAL percent RSD (relative standard deviation) was observed for 4,4'-DDT in the calibration analyzed 04/20/05 15:57; average ICAL %RSD met method requirements, and affected data was qualified with "b". Low surrogate recovery was observed for decachlorobiphenyl in SCIMW-7 (lab # 178873-001); the corresponding TCMX surrogate recovery was within limits. No other analytical problems were encountered.

18. GENERATOR'S CERTIFICATION: I hereby declare that the contents of this consignment are fully and accurately described above by proper shipping name and are classified, packed, marked, and labeled, and are in all respects in proper condition for transport by highway according to applicable international and national government regulations.

If I am a large quantity generator, I certify that I have a program in place to reduce the volume and toxicity of waste generated to the degree I have determined to be economically practicable and that I have selected the practicable method of treatment, storage, or disposal currently available to me which minimizes the present and future threat to human health and the environment; OR, if I am a small quantity generator, I have made a good faith effort to minimize my waste generation and select the best waste management method that is available to me and that I can afford.
