**PROFESSIONAL CERTIFICATION AND LIMITATIONS**

The environmental remediation program described in the attached Contractor's Report of Remediation was conducted by Dietz Irrigation, that holds a Class A Contractor's license with Hazardous Waste Endorsement issued by the California State Contractors Licensing Board, who worked under my oversight as the Engineer of Record for the project.

All soil and groundwater sampling, surveying and other professional engineering work for which results are reported in this document were performed by me or by persons performing the work in my presence and under my direction.

D. J. Watkins, Ph.D., PE.  
Civil Engineer  
The San Joaquin Company Inc.

## Background

In the year 2000 SNK Development Inc. (SNK) was considering purchase of the property at 3992 San Pablo Avenue, Emeryville, California. At that time a Phase I Environmental Site Assessment was prepared by The San Joaquin Company, Inc. (SJC) and provided to SNK Development Inc. in September 2000. As part of that Site Assessment the former Celis Service Station, which was formerly located directly north of the site was identified as a potential source of hydrocarbon contamination on the northwest corner of the site. Also as part of the investigation of the leaking underground storage tanks at the Celis Service Station site the water table in the area was identified to be in a range of 6 to 9 feet. This water table was measured over a two year period in monitoring wells. SNK purchased the site and in the year 2002 demolished the buildings, which were formerly located on the site, in preparation for redevelopment. In early 2003 SNK was ready for redevelopment of the site and planned to construct retail buildings and apartments. In preparation for construction a site investigation to determine the extent of the hydrocarbon affected soil was conducted by Apex Envirotech, Inc (Apex). Following receipt of the Apex report, which showed that the site had been adversely impacted by hydrocarbons, SNK contracted with SJC for trenching to further identify the condition of the soil beneath the site and to prepare a Work Plan for remediation. A Remediation Work Plan was prepared and issued in March of 2003. This plan was approved by Alameda County Public Health and is the controlling document for the soil remediation.

The key documents associated with the site remediation are listed in the Reference Section.

## Work Description

On April 21, 2003 Dietz Irrigation, a licensed general engineering contractor with a hazardous waste sub license, mobilized to the job site (see Figure 1). The initial equipment mobilized to the job site included:

- A Case 9040 B Excavator with thumb.
- A Case 921 Loader with 6 cubic yard bucket and on board scale.
- A Komatsu Excavator PC200LC-5.

The excavation to remove the top 4 to 5 feet of soil unaffected by hydrocarbons was started along the edges of 40<sup>th</sup> Street to the north and San Pablo Avenue to the west. This area as shown in Figure 2 was designated in the Remediation Work Plan (See References) as the area requiring remedial excavation for removal of hydrocarbon affected soil. The excavated (unaffected soil) was stockpiled on the east end of the site for future use. During excavation of unaffected soil, the footings of a warehouse and commercial retail businesses, which were previously located on the site were encountered. These were "upside down T" footings with a concrete base 4 foot wide

approximately 20 inches thick with brick and mortar approximately 40 inches wide tapering to 12 inches at the surface to form the vertical leg of the footing. The total height of these footings were 4 to 8 feet depending on location. Also basement slabs were encountered along San Pablo Avenue approximately 8 feet below ground surface. It became necessary to remove these footing and ship the material off site prior to continuation of the remedial excavation. To accomplish this, a Caterpillar 318 excavator with a 3000 pound breaker was mobilized to the job site to break the footings prior to loading and shipping for disposal. The concrete associated with these footings was shipped to a recycler, to be used as future road base. The brick could not be recycled and was shipped to a landfill.

During removal of the footings a 1500 gallon fuel oil tank, which had previously been used for heating the warehouse was discovered. The tank had contained Bunker-C fuel oil and was full. The tank was pumped and the contents shipped off site for recycling under hazardous waste manifest. Just prior to removal of the tank it was discovered that the tank had refilled again from groundwater and it was pumped a second time prior to removal. During the removal of the heating oil tank a second tank was discovered in the same pit. This second tank was a small, badly decomposed tank with a capacity of 100 gallons, which had probably been used for fueling forklifts in the warehouse. Both tanks were associated with the warehouse and are called Tank 1 and Tank 2. These tanks were removed in accordance with Alameda County regulations on April 29, 2003. See the Tank Closure Report listed in the references for further details.

Once the footings and tanks 1 and 2 were removed from the site, work resumed on remediation on the hydrocarbon affected soil. Excavation proceeded from the north along 40<sup>th</sup> Street. Informal samples were taken to aid in quantifying the concentration of hydrocarbons in the soils. Generally a clay layer (blue/gray in color) was used as a guide to cease excavation. This layer was approximately 8 to 9 feet below ground surface. Excavation continued below 9 feet up to a maximum depth of 12 feet in areas, which were identified as containing levels of hydrocarbon exceeding the cleanup standards. The confirmation samples were taken on a 20 foot grid pattern plus samples every 20 feet along the sidewalls. The excavations along 40<sup>th</sup> Street and San Pablo Avenue were advanced as close to the sidewalk as soil stability would permit. These excavations were nearly vertical. The soil stability remained good during the course of the remediation and it was not necessary to provide any shoring to maintain stability.

Water was encountered at 5 feet in some areas and appeared to be flowing at approximately 10 gallons per minutes into these areas. In other areas on the site water occurred at approximately 8 to 9 feet and entered the excavation very slowly. Generally the site was quite soft and wheel equipment such as trucks and front loaders easily sank in the native soil. The source of the shallow water was found to be associated with a sand lens that extended through the site from the northeast to mid site on the west boundary. The top of this lens was approximately 5 feet below ground surface. The size of the lens

was approximately 5 feet thick by 20 feet wide. Water tended to follow the foundation lines and other piping trenches such as sewer lines which intersected the sand lens. The entire sand lens was highly affected by hydrocarbons and provided a preferential pathway for migration of hydrocarbon affected water.

This sand lens is shown in Figure 3. It was removed entirely from the site and shipped off site as hydrocarbon affected soil. A dam was constructed at the northeast end of the site where the lens entered the site to stop water flow into areas being excavated. This permitted deeper excavation of hydrocarbon affected soil and allowed excavation to 8 to 9 feet without being under water.

During removal of the sand lens a large block of concrete was discovered along San Pablo Avenue about 130 feet south of the intersection of San Pablo Avenue and 40<sup>th</sup> Street. This contained a 1500 gallon fuel oil tank which had been encased in concrete. The tank (designated tank 3) was removed on May 22, 2003 in accordance with Alameda County regulations. See the Tank Closure Report listed in the references.

The site was generally soft due to the shallow groundwater which, limited access for trucking and loader operation. To permit excavation to continue and to load trucks directly rather than stockpiling material, roads were constructed using rock at the water table to provide stability. Stockpiles of soil were used only for several hours to comply with Air Board regulations. In most cases hydrocarbon affected soil was excavated and loaded directly into trucks for shipment off site.

After the excavation reached total depth and confirmation samples had been taken, large 2 to 6 inch crushed rock was used to stabilize the bottom since all excavations were below the water table. A Caterpillar Model CP433 66 inch pad foot vibratory compactor was mobilized to the job site and used to compact the rock placed on the excavation bottom.

End dump trucks were used to transport soil under special waste manifest for disposal at Class II landfills. A total of 410 truck loads were loaded, manifested and shipped off site for disposal. The weighed tonnage for soil removed was 7074.57 tons. This is an estimated 7888 loose yards. See Table 1 for a tabulation of loads shipped to each of the landfills.

Table 2 is a tabulation of the results of confirmation soil samples recovered from the remedial excavation bottom and sidewalls. The grid for these confirmation samples and wall samples was a 20 feet by 20 feet grid across the area of the remedial excavation. See Figure 4.

The area along the north site boundary (40<sup>th</sup> Street) appears to have been the source of the hydrocarbon contamination. This is adjacent to the site of the former service station, which was located just to the north of the site. See Figure 5. The soils in this sidewall still contains hydrocarbons exceeding the site cleanup standards. This wall was very

close, approximately 10 feet, to the tank pit of the former service station. This soil could not be excavated further north without removal of the sidewalk and extending the excavation into the public right away (40<sup>th</sup> Street). Soil samples on the west boundary of the site (San Pablo Avenue) also contain soil exceeding the cleanup standard and could not be excavated without removing the sidewalk and excavation into the public right away (San Pablo Avenue).

In several other areas the level of hydrocarbons remaining in the soil exceeded the site cleanup standards listed in the Work Plan. These areas were excavated to about one bucket depth below the water table. The engineering report will further discuss the significance of this hydrocarbon affected soil exceeding the cleanup standard. Photographs following excavation are shown in Figures 6 and 7.

At the conclusion of the excavation the water source at the northeast corner of the site along 40<sup>th</sup> Street (see sand lens in Figure 3), which had been dammed to permit excavation was sucked into a vacuum truck. This water had a brown scum on the top, which was skimmed prior to removal of the water to prevent adherence of this floating material to the soil. The water was then emptied from the dammed area and about 2000 gallons of water was shipped off site for recycling under hazardous waste manifest. A copy of this manifest is attached. After the water was removed clay was excavated and placed to form a compacted clay plug at the 40<sup>th</sup> Street (upstream) entrance of the sand lens to the site. Also a similar clay plug was placed at the San Pablo Avenue (downstream) location where the sand lens exited from the site. This clay was compacted using an excavator with a 24 inch wheel to achieve compaction along the sidewalk. Once the clay plug had been expanded in size, a 66 inch pad foot compactor was used to finish the plug. This formed a barrier to water inflow onto the site from this sand lens.

Figures 3, 4 and 5 show the extent of the remedial excavation on this site. While the results of the confirmation sampling is shown in Figure 4, the Chain of Custody and laboratory results will be included in the engineering report.

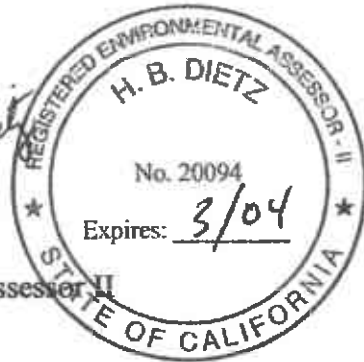

Copies of all manifests are included in the Appendix. This Appendix will only be provided to Alameda County and SNK for their future reference.

**Action Requested**

Excavation of hydrocarbon affected soil was concluded on May 28, 2003. The excavation was advanced to the practical limits due to constraints imposed by 40<sup>th</sup> Street and San Pablo Avenue and depth of groundwater. It is requested that the lead regulatory agency, Alameda County Public Health, concur that all physical excavation to remediate the hydrocarbon affected soil has been completed on site and that redevelopment of the site may proceed.

# Certificate of Treatment/Recycling

ISSUED TO  
SNK CONSTRUCTION INC c/o  
DIETZ IRRIGATION

MANIFEST NUMBER 22455775 FOR 06/03/03 DATE RECEIVED

The aqueous waste received on the above manifest will be treated to standards mandated by the FEDERAL CLEAN WATER ACT and to effluent requirements established by the Sanitation Districts of Los Angeles County. Waste treatment and recycling is performed under permits granted to DeMENNO/KERDOON, a California Corporation, by the California Department of Toxic Control (DTSC), in coordination with the Environmental Protection Agency, in accordance with the provisions of the Resource Conservation and Recovery Act (RCRA) of 1976, together with applicable federal and state regulations including but not limited to waste discharge requirements established by the Sanitation Districts of Los Angeles County.

When the above described waste material is accepted by DeMENNO/KERDOON and treated/recycled and the aqueous phase discharged for further treatment by the Sanitation Districts, the certificate holder's responsibility for the waste material is eliminated under both RCRA and Proposition 65. Upon request, DeMENNO/KERDOON will issue this certificate that all waste material has been handled in accordance with applicable permits and the certificate holder's liability has been terminated.

DeMENNO/KERDOON

Notes:

- (1) ND = Not Detected above the Method Detection Limit (MDL).
- (2) n/a = Not analyzed
- (3) The laboratory reports that the detected hydrocarbon does not match its Diesel standard. The hydrocarbon detected appears to be a mixture of Diesel and Mineral Spirits, but the components of the mixture, all of which were in the Diesel range, were insufficiently distinct to quantify them separately.
- (4) Does not match laboratory's standard for gasoline
- (5) Concentrations in bold script exceed the San Francisco Bay Area RWQCB's Tier 1 RBSLs

- (2) n/a = Not analyzed
- (3) The laboratory reports that the detected hydrocarbon does not match its Diesel Standard.
- (4) The laboratory reports that the detected hydrocarbon does not match its Gasoline Standard.
- (5) Concentrations in bold script exceed the San Francisco Bay Area RWQCB's Tier 1 RBSLs

## SNK Andante Clean-up Goals

### Per RWQCB - East Bay Tier 1 RBCA Requirements

FOR CONTAMINANTS REMAINING IN SITU FOLLOWING COMPLETION OF REMEDIAL EXCAVATION:

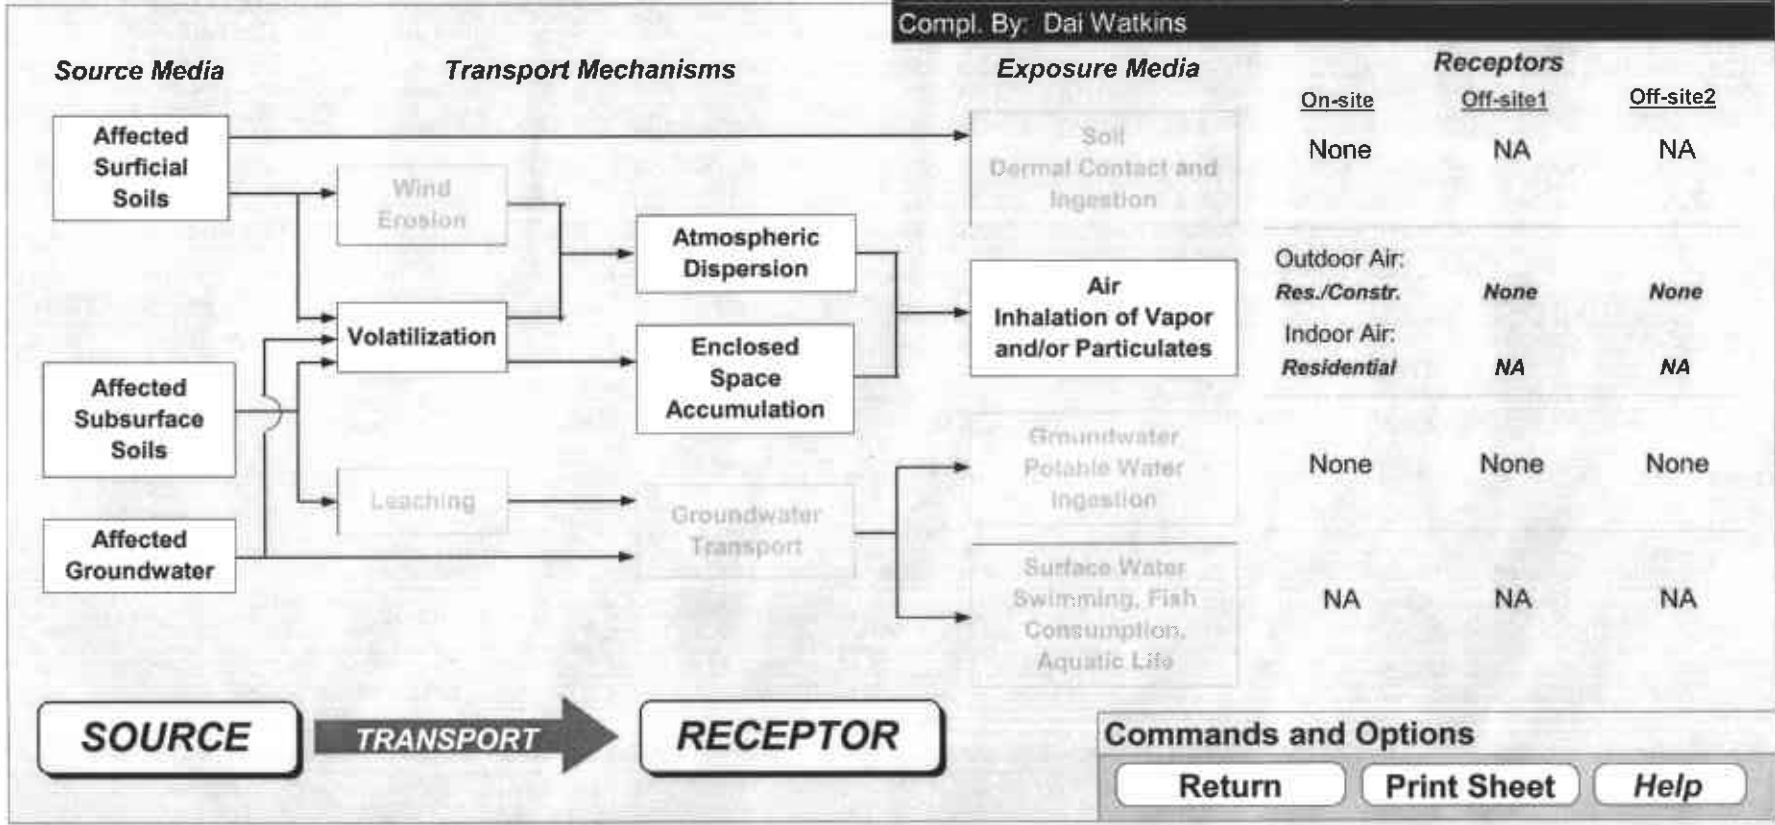

**SHALLOWER THAN 9 FT (WATER IS NOT DRINKING WATER)  
RESIDENTIAL (WITH NO THREAT TO SURFACE WATER)**

Analyte	Clean-Up Requirement Soil	Clean-Up Requirement Groundwater
Total Petroleum hydrocarbons quantified as diesel (TPHd)	500 mg/Kg	640 µg/Kg
Total Petroleum hydrocarbons quantified as gasoline (TPHg)	400 mg/Kg	500 µg/Kg
Benzene:	0.18 mg/Kg	46 µg/Kg
Toluene:	8.4 mg/Kg	130 µg/Kg
Ethylbenzene:	24 mg/Kg	290 µg/Kg
Total Xylene Isomers:	1.0 mg/Kg	13 µg/Kg
Methyl tertiary butyl ether	1.0 mg/Kg	1,800 µg/Kg
Naphthalene	1.7 mg/Kg	24 µg/Kg

Bldg 3A: RESIDENTIAL

### Input Parameter Summary

Site Name: SHK Andante  
 Site Location: 3992 San Pablo Ave. Emeryville Bld 2A

Completed By: Dai Watkins  
 Date Completed: 11-Jun-03

Job ID: 9401.205

1 OF 1

Exposure Parameters	Residential			Commercial/Industrial	
	Adult	(1-6yrs)	(1-16 yrs)	Chronic	Construc.
AT <sub>c</sub>	Averaging time for carcinogens (yr)				
AT <sub>n</sub>	Averaging time for non-carcinogens (yr)				
BW	Body weight (kg)				
ED	Exposure duration (yr)				
τ	Averaging time for vapor flux (yr)				
EF	Exposure frequency (days/yr)				
EF <sub>D</sub>	Exposure frequency for dermal exposure				
IR <sub>w</sub>	Ingestion rate of water (L/day)				
IR <sub>s</sub>	Ingestion rate of soil (mg/day)				
SA	Skin surface area (dermal) (cm <sup>2</sup> )				
M	Soil to skin adherence factor				
ET <sub>swim</sub>	Swimming exposure time (hr/event)				
EV <sub>swim</sub>	Swimming event frequency (events/yr)				
IR <sub>swim</sub>	Water ingestion while swimming (L/hr)				
SA <sub>swim</sub>	Skin surface area for swimming (cm <sup>2</sup> )				
IR <sub>fish</sub>	Ingestion rate of fish (kg/yr)				
F <sub>fish</sub>	Contaminated fish fraction (unitless)				

Complete Exposure Pathways and Receptors	On-site	Off-site 1	Off-site 2
<b>Groundwater:</b>			
Groundwater Ingestion	None	NA	NA
Soil Leaching to Groundwater Ingestion	None	NA	NA
<b>Applicable Surface Water Exposure Routes:</b>

# Exposure Factors and Target Risk Limits

## 1. Exposure Parameters

Age Adjustment?	Residential		Commercial	
	Adult	(Age 0-6) (Age 0-16)	Chronic	Construc.
Averaging time, carcinogens (yr)	70			
Averaging time, non-carcinogens (yr)	30		25	1
Body weight (kg)	70	15 35	70	
Exposure duration (yr)	30	6 16	25	1
Exposure frequency (days/yr)	350		250	180
Dermal exposure frequency (days/yr)	350		250	
Skin surface area, soil contact (cm <sup>2</sup> )	<input type="checkbox"/> 5800	2023	5800	5800
Soil dermal adherence factor (mg/cm <sup>2</sup> /day)	1			
Water ingestion rate (L/day)	2		1	
Soil ingestion rate (mg/day)	<input type="checkbox"/> 100	200	50	100
Swimming exposure time (hr/event)	3			
Swimming event frequency (events/yr)	12	12 12		
Swimming water ingestion rate (L/hr)	<input type="checkbox"/> 0.05	0.5		
Skin surface area, swimming (cm <sup>2</sup> )	<input type="checkbox"/> 23000	8100		
Fish consumption rate (kg/day)	0.025			
Contaminated fish fraction (unitless)	1

# Transport Modeling Options

## 1. Vertical Transport, Surface Soil Column

### Outdoor Air Volatilization Factors ?

- Surface soil volatilization model only
- Combination surface soil/Johnson & Ettinger models
  - Thickness of surface soil zone  (ft)
- User-specified VF from other model Enter VF Values

### Indoor Air Volatilization Factors ?

- Johnson & Ettinger model
- User-specified VF from other model Enter VF Values

### Soil-to-Groundwater Leaching Factor ?

- ASTM Model
  - Apply Soil Attenuation Model (SAM)
  - Allow first order biodecay Enter Decay Rates
- User-specified LF from other model Enter LF Values

## 2. Lateral Air Dispersion Factor

- 3-D Gaussian dispersion model
  - Off-site 1
  - Off-site 2  (-)
- User-Specified ADF

Site Name: SNK Andante Job ID: 9401.205  
 Location: 3992 San Pablo Ave. Emeryville Bld. 1 Date: 11-Jun-03  
 Compl. By: Dai Watkins

## 3. Groundwater Dilution Attenuation Factor

### Calculate DAF using Domenico Model ?

- Domenico equation with dispersion only (no biodegradation)
- Domenico equation first-order decay Enter Decay Rates
- Modified Domenico equation using electron acceptor superposition Enter Site Data
- Enter Directly Biodegradation Capacity  (mg/L)

— or —

### User-Specified DAF Values

- DAF values from other model or site data Enter DAF Values

## 4. Commands and Options

# Site-Specific Soil Parameters

## 1. Soil Source Zone Characteristics

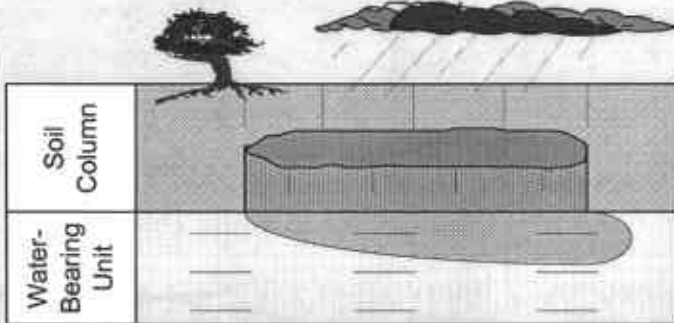

### Hydrogeology

General Case Construction

Depth to water-bearing unit	7.81	(ft)
Capillary zone thickness	5	(ft)
Soil column thickness	2.81	(ft)

### Affected Soil Zone

Depth to top of affected soils	8.08	(ft)
Depth to base of affected soils	11.24	(ft)
Affected soil area	4880	4880 (ft <sup>2</sup> )
Length of affected soil parallel to assumed wind direction	122	122 (ft)
Length of affected soil parallel to assumed GW flow direction	147.6377953 (ft)	

Site Name: SNK Andante Job ID: 9401.205  
 Location: 3992 San Pablo Ave. Emeryville Bld. 1 Date: 11-Jun-03

Compl. By: Dai Watkins

## 2. Surface Soil Column

Vadose Zone Capillary Fringe

### Predominant USCS Soil Type

Total porosity	0.5	(-)
Volumetric water content	0.25	0.49 (-)
Volumetric air content	0.25	0.01 (-)
Dry bulk density	1.78	(kg/L)
Vertical hydraulic conductivity	5.7E-7	(cm/s)
Vapor permeability	1.1E-16	(ft <sup>2</sup> )
Capillary zone thickness	5.0E+0	(ft)

### Net Rainfall Infiltration

Net infiltration estimate	NA	(cm/yr)
Average annual precipitation	0	(cm/yr)

### Partitioning Parameters

Fraction organic carbon	0.02	(-)
Soil/water pH	6.8	(-)

## 3. Commands and Options

## Site-Specific Air Parameters

### 1. Outdoor Air Pathway

#### Dispersion in Air

Distance to offsite air receptor   (ft)

or

Horizontal dispersivity  (ft)

Vertical dispersivity  (ft)

#### Air Source Zone

Air mixing zone height  (ft)

Ambient air velocity in mixing zone  (ft/s)

Areal particulate emission flux  (g/cm<sup>2</sup>/s)

### 2. Indoor Air Pathway

#### Building Parameters

Building volume/area ratio  (ft)

Foundation area   (ft<sup>2</sup>)

Foundation perimeter   (ft)

Building air exchange rate   (1/s)

Depth to bottom of foundation slab   (ft)

Convective air flow through cracks   (ft<sup>3</sup>/s)

Foundation thickness  (ft)

Foundation crack fraction  (-)

Volumetric water content of cracks  (-)

Volumetric air content of cracks  (-)

Indoor/Outdoor differential pressure  (psi)

## SNK Andante Clean-up Goals

### Per RWQCB - East Bay Tier 1 RBCA Requirements

FOR CONTAMINANTS REMAINING IN SITU FOLLOWING COMPLETION OF REMEDIAL EXCAVATION:

**SHALLOWER THAN 9 FT (WATER IS NOT DRINKING WATER)  
RESIDENTIAL (WITH NO THREAT TO SURFACE WATER)**

Analyte	Clean-Up Requirement Soil	Clean-Up Requirement Groundwater
Total Petroleum hydrocarbons quantified as diesel (TPHd)	500 mg/Kg	640 µg/Kg
Total Petroleum hydrocarbons quantified as gasoline (TPHg)	400 mg/Kg	500 µg/Kg
Benzene:	0.18 mg/Kg	46 µg/Kg
Toluene:	8.4 mg/Kg	130 µg/Kg
Ethylbenzene:	24 mg/Kg	290 µg/Kg
Total Xylene Isomers:	1.0 mg/Kg	13 µg/Kg
Methyl tertiary butyl ether	1.0 mg/Kg	1,800 µg/Kg
Naphthalene	1.7 mg/Kg	24 µg/Kg
