Subject: Pre-Construction Subsurface Investigation and Well Destruction at Former Chevron Bulk Fuel Terminal and Asphalt Plant, 1520 Powell Street, Emeryville, California.

Mr. Hunter:

At the request of Chevron Products Company (Chevron), Gettler-Ryan Inc. (GR) performed a pre-construction subsurface investigation and destroyed five groundwater monitoring wells at the above referenced site. The purpose of this work was to evaluate soil for disposal characterization prior to excavation for an underground parking garage, and to destroy groundwater monitoring wells located within or at the proposed excavation limits. The scope of work included: updating the site safety plan; obtaining the required drilling and well destruction permit; advancing sixty-four soil borings to 10 feet below ground surface (bgs) using a GeoProbe rig; collecting two soil samples from each boring; analyzing soil samples for the presence of petroleum hydrocarbons; destroying five groundwater monitoring wells (MW-2A, MW-8, MW-10, MW-11 and MW-13); and preparing a report documenting the work. Two groundwater monitoring wells (MW-1 and MW-12) were not destroyed, because these wells could not be located.

SITE DESCRIPTION

The subject site is a former Chevron bulk fuel terminal and asphalt plant located at Landregan Street and the Powell Street overpass in Emeryville, California (Figure 1). The three-acre site is bordered to the east and south by Landregan and Powell Streets, respectively, and to the west by the Southern Pacific Railroad tracks. The plant was used previously as a storage and transfer facility for petroleum products. From early 1950s until 1987, the Chevron asphalt plant operated as a laboratory and test facility for asphalt composition and asphalt-based surface coatings. A portion of the land was leased to a solvent handler during this same period. Recently the subject site has been converted to an Amtrak passenger terminal. The southern portion of the site has been used as a parking lot for Amtrak passengers. Currently, the southern portion of the site is being reconstructed into a parking garage.

345161.02

Soil and groundwater beneath the subject site have been impacted by hydrocarbons. Approximately 10,670 cubic yards of impacted soil was excavated and removed from the site during demolishing and remediation activities in late 1980s and early 1990s. Nineteen groundwater monitoring wells (MW-1 through MW-19) were installed at the site to monitor groundwater conditions. Wells MW-4, MW-5, MW-6, MW-9, and MW-14 were destroyed. Wells MW-2 and MW-19 were replaced with wells MW-2A and MW-19A.

FIELD WORK

Field work was conducted in accordance with GR's Field Methods and Procedures (attached) and the Site Safety Plan dated November 19, 1999. Soil boring permit (# 99WR674) and well destruction permit (# 99WR672) were obtained from the Alameda County Public Works Agency (ACPWA), an underground utility locator was contracted to clear boring locations and Underground Service Alert was notified prior to drilling at the site. Copies of the permits are attached.

Well Destruction

On November 22, 1999, a GR geologist observed Bay Area Exploration (C57 #522125) destroy groundwater monitoring wells MW-2A, MW-8, MW-10, MW-11 and MW-13. Locations of the former wells are shown on Figure 2. Well destruction activities are summarized in Table 1. Wells MW-1 and MW-12 were not destroyed because these wells could not be located.

The wells were drilled out with 10-inch diameter hollow stem augers to 1 foot past the installed depth to remove the casing, sand pack and annular seal material. Upon completion of drilling, neat cement was placed in the borings from the total depth to the ground surface. The well boxes were left in place as requested by the garage construction contractor (Webcor) to be removed during the excavation for the parking garage. Drill cuttings generated during well destruction activities were stockpiled on-site, placed on and covered with plastic sheeting, pending removal with the soil generated from the excavation for the parking garage.

Wells MW-2A, MW-8, MW-10, MW-11 and MW-13 have been properly destroyed as required by California Department of Water Resources' *California Well Standards* (Bulletins 74-81 and 74-90) and ACPWA guidelines. Copies of the State of California Well Completion Reports are attached.

GeoProbe Borings

On November 22 and 23, 1999, sixty-four on-site borings (G1 through G32 and G1A through G32A) were advanced using a GeoProbe rig at the locations shown on Figure 1. Borings G1 through G15, G17 through G31, G7A through G15A, and G17A through G25A were advanced by Vironex, Inc. (C57-705927). Borings G1A through G6A, G16, G16A, G32, and G26A through G32A were advanced by Fisch Environmental (C57-683865). A GR geologist observed drilling activities and collected soil samples from the borings. The borings were advanced to 10 feet bgs. Two soil samples were collected from each boring at approximate depths of 5 and 9.5 feet bgs. Upon completion of sample collection the borings were backfilled with neat cement or bentonite from the total depth to the ground surface.

The soil samples were submitted to Sequoia Analytical in Walnut Creek (ELAP #1271) for compositing and analyses. The samples from each pair of borings (G1 and G1A through G32 and G32A) were composited into one 4-point composite sample [G1(5,9.5,A5,A9.5) through G32(5,9.5,A5,A9.5), respectively] and analyzed for total petroleum hydrocarbons as gasoline (TPHg), and benzene, toluene, ethylbenzene and xylenes (BTEX) by EPA Method 8015/8020; total petroleum hydrocarbons as diesel (TPHd) by EPA Method 8015; oil and grease (O&G) by Standard Method 5520E&F; and total lead by EPA Method 6010A. In addition, samples G1(5,9.5,A5,A9.5) through G4(5,9.5,A5,A9.5), G13 (5,9.5,A5,A9.5) through G20(5,9.5,A5,A9.5), and G29(5,9.5,A5,A9.5) through G32(5,9.5,A5,A9.5) were analyzed for volatile organic compounds (VOCs) by EPA Method 8240. Four soil samples containing total lead at concentrations exceeding 50 ppm were also analyzed for soluble lead by the Soluble Threshold Limit Concentration Method.

TPHg (up to 550 parts per million [ppm]) were detected in sixteen of the thirty-two composite samples. Benzene (0.35 ppm) was detected in one sample. Toluene (up to 0.64 ppm) was detected in nine samples. Ethylbenzene (up to 0.92 ppm) was detected in seven samples. Xylenes (up to 2.4 ppm) were detected in fourteen samples. Diesel-range hydrocarbons reported as TPHd (up to 390 ppm) were detected in all samples and O&G (up to 750 ppm) was detected in all but four samples. VOCs (excluding BTEX) were not detected except for vinyl acetate [0.10ppm in sample G2(5,9.5,A5,A9.5)], trichloroethene [up to 0.41 ppm in samples G2(5,9.5,A5,A9.5) through G3(5,9.5,A5,A9.5)], and chlorobenzene [0.40 ppm in sample G15(5,9.5,A5,A9.5)]. All samples contained lead (up to 600 ppm). Samples G28(5,9.5,A5,A9.5) and G31(5,9.5,A5,A9.5) contained soluble lead at concentrations of 1.6 ppm and 19 ppm, respectively. The laboratory analytical results are summarized in Table 1.

The soil from the subject site has been approved for disposal at Altamont Landfill in Livermore, California, except for the soil from the vicinity of borings G31 and G31A. The soil approved for disposal was excavated, loaded onto trucks, and transported to the landfill under direction of Webcor. The soil excavated from the area around borings G31 and G31A was stockpiled at the site pending disposal.

On January 25, 2000, GR collected seven 4-point composite samples [A(1,2,3,4) through G(1,2,3,4)] from the soil stockpile. These samples were analyzed for TPHg, BTEX, TPHd, O&G, and total lead. Five samples containing total lead at concentrations exceeding 50 ppm were also analyzed for soluble lead. TPHg (up to 9 ppm) were detected in three of the seven composite samples collected from the soil stockpile. Xylenes (up to 0.018 ppm) were detected in two samples. Diesel-range hydrocarbons reported as TPHd (up to 540 ppm) were detected in five of the seven samples and O&G (up to 1,800 ppm) was detected in six samples. All seven samples contained total lead (up to 90 ppm). Soluble lead was detected in all five samples analyzed at concentrations up to 1.4 ppm. The soil stockpile results are summarized in Table 1.

Based on soil stockpile sampling results, the landfill accepted the soil from the vicinity of borings G31 and G31A for disposal. The soil was transported to the landfill under direction of Webcor.

If you have questions, please call us at (925) 551-7555.

Sincerely
Gettler-Ryan Inc.

²¹ Chromatogram pattern: Unidentified hydrocarbons >C16

²² Chromatogram pattern: Unidentified hydrocarbons C9-C24

²³ Surrogate out of control limits because of peak coelution with the sample

mg/kg = milligram/kilogram

mg/l = milligram/liter

TPHg = total petroleum hydrocarbons as gasoline

TPHd = total petroleum hydrocarbons as diesel

TRPH = total recoverable petroleum hydrocarbons (5520E&F)

VOC = volatile organic compounds

GR FIELD METHODS AND PROCEDURES

Site Safety Plan

Field work performed by Gettler-Ryan Inc. (GR) is conducted in accordance with GR's Health and Safety Plan and the Site Safety Plan. GR personnel and subcontractors who perform work at the site are briefed on these plans contents prior to initiating site work. The GR geologist or engineer at the site when the work is performed acts as the Site Safety Officer. GR utilizes a photoionization detector (PID) to monitor ambient conditions as part of the Health and Safety Plan.

Collection of Soil Samples

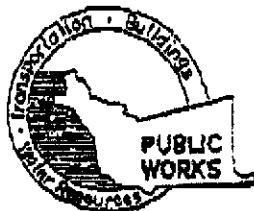

Exploratory soil borings are drilled by a California-licensed well driller. A GR geologist is present to observe the drilling, collect soil samples for description, physical testing, and chemical analysis, and prepare a log of the exploratory soil boring. Soil samples obtained with a Geoprobe® rig are collected from the soil boring with a split-barrel sampling device fitted with 1-inch-diameter, clean brass or plastic liners. The Geoprobe® drives the sampling device approximately 24 inches, and the filled sampler is then retrieved from the boring. The encountered soil is described using the Unified Soil Classification System (ASTM 2488-84) and the Munsell Soil Color Chart.

After removal from the sampling device, soil samples for chemical analysis are covered on both ends with teflon sheeting or aluminum foil, capped, labeled, and placed in a cooler with blue ice for preservation. A chain-of-custody form is initiated in the field and accompanies the selected soil samples to the analytical laboratory. Samples are selected for chemical analysis based on:

- a. depth relative to underground storage tanks and existing ground surface
- b. depth relative to known or suspected groundwater
- c. presence or absence of contaminant migration pathways
- d. presence or absence of discoloration or staining
- e. presence or absence of obvious gasoline hydrocarbon odors
- f. presence or absence of organic vapors detected by headspace analysis

Field Screening of Soil Samples

A PID is used to perform head-space analysis in the field for the presence of organic vapors from the soil sample. This test procedure involves removing some soil from one of the sample tubes not retained for chemical analysis and immediately covering the end of the tube with a plastic cap. The PID probe is inserted into the headspace inside the tube through a hole in the plastic cap. Head-space screening results are recorded on the boring log. Head-space screening procedures are performed and results recorded as reconnaissance data. GR does not consider field screening techniques to be verification of the presence or absence of hydrocarbons.

ESTIMATED STARTING DATE 11/22/99
ESTIMATED COMPLETION DATE 11/23/99

I hereby agree to comply with all requirements of this permit and
Alameda County Ordinance No. 73-68.

APPLICANT'S SIGNATURE Stephen Carter DATE 11/17/99

FOR OFFICE USE

PERMIT NUMBER 99WR674
WELL NUMBER _____
APN _____

PERMIT CONDITIONS

Circled Permit Requirements Apply

(A) GENERAL

- 1. A permit application should be submitted so as to arrive at the ACPWA office five days prior to proposed starting date.
- 2. Submit to ACPWA within 60 days after completion of permitted work the original Department of Water Resources Water Well Drillers Report or equivalent for well projects, or drilling logs and location sketch for geotechnical projects.
- 3. Permit is void if project not begun within 90 days of approval date.

B. WATER SUPPLY WELLS

1. Minimum surface seal thickness is two inches of cement grout placed by tremie.
2. Minimum seal depth is 50 feet for municipal and industrial wells or 20 feet for domestic and irrigation wells unless a lesser depth is specially approved.

C. GROUNDWATER MONITORING WELLS

INCLUDING PIEZOMETERS

1. Minimum surface seal thickness is two inches of cement grout placed by tremie.
2. Minimum seal depth for monitoring wells is the maximum depth practicable or 30 feet.

D. GEOTECHNICAL

Backfill bore hole with compacted cuttings or heavy bentonite and upper two feet with compacted material. In areas of known or suspected contamination, tremie cement grout shall be used in place of compacted cuttings.

E. CATHODIC

Fill hole above anode zone with concrete placed by tremie.

F. WELL DESTRUCTION

See attached.

(G) SPECIAL CONDITIONS SEE ATTACHED INFORMATION.

APPROVED

WATER RESOURCES SECTION GROUNDWATER PROTECTION ORDINANCE For Monitoring Well at Clean or Contaminated Site

Destruction Requirements:

1. Drill out the well so that the casing, seal, and gravel pack are removed to the bottom of the well.
2. Sound the well as deeply as practicable and record for your report.
3. Using a tremie pipe, fill the hole to 2 feet below the lower of finished grade or original ground with neat cement.
4. After the seal has set, backfill the remaining hole with compacted material.

WATER RESOURCES SECTION GROUNDWATER PROTECTION ORDINANCE

Destruction Requirements:

1. Remove from the well any pump, appurtenances, debris, or other materials to a depth of 22 feet below the finished grade or original ground, whichever is the lower elevation.
2. Sound the well as deeply as practicable and record for your report.
3. Fill well below 22 feet with ~~pea gravel at neat cement~~. Neat cement, cement grout or concrete ~~may be substituted for pea gravel if desired~~.
4. Remove any casing(s) and annular seal to 2 feet below finished grade of original ground, whichever is the lower elevation.
5. Fill the remaining 20 foot length of casing with neat cement, cement grout or concrete. Allow the sealing material to spill over the top of the casing to fill any annular space between casing and soil.
6. After the seal has set, backfill the remaining hole with compacted material.

Notes and Definitions

- A-01 Unidentified Hydrocarbon >C7
- D-06 Discrete peaks.
- D-11 Chromatogram Pattern: Unidentified Hydrocarbons < C16
- D-12 Chromatogram Pattern: Unidentified Hydrocarbons > C16
- P-03 Chromatogram Pattern: Unidentified Hydrocarbons C6-C12
- P-04 Chromatogram Pattern: Gasoline C6-C12 + Unidentified Hydrocarbons C6-C12
- P-06 Chromatogram Pattern: Gasoline C6-C12+ Unidentified Hydrocarbons >C8
- Q-18 The method blank contains analyte at a concentration above the MRL. This concentration is less than 5% of the sample result, which is negligible according to method criteria.
- S-01 The surrogate recovery for this sample is not available due to sample dilution required from high analyte concentration and/or matrix interferences.
- S-04 The surrogate recovery for this sample is outside of established control limits due to a sample matrix effect.
- DET Analyte DETECTED
- ND Analyte NOT DETECTED at or above the reporting limit
- NR Not Reported
- dry Sample results reported on a dry weight basis
- RPD Relative Percent Difference

Sequoia Analytical - Walnut Creek

The results in this report apply to the samples analyzed in accordance with the chain of custody document. This analytical report must be reproduced in its entirety.

Alan B. Kemp, Laboratory Director

Gettler Ryan, Inc. - Dublin
6747 Sierra Court Suite J
Dublin CA, 94568

Project: Chevron
Project Number: Asphalt Plant
Project Manager: Barbara Sieminski

Reported:
26-Jan-00 15:12

Notes and Definitions

- D-07 Surrogate out of control limits because of peak coelution with the sample.
- D-12 Chromatogram Pattern: Unidentified Hydrocarbons > C16
- D-14 Chromatogram Pattern: Unidentified Hydrocarbons C9-C24
- P-03 Chromatogram Pattern: Unidentified Hydrocarbons C6-C12
- P-05 Chromatogram Pattern: Unidentified Hydrocarbons >C8
- Q-02 The spike recovery for this QC sample is outside of established control limits due to sample matrix interference.
- DET Analyte DETECTED
- ND Analyte NOT DETECTED at or above the reporting limit
- NR Not Reported
- dry Sample results reported on a dry weight basis
- RPD Relative Percent Difference
