Dear Mr. Gholami:

On April 15, 2004, we discussed the *Site Investigation Work Plan* for the A-Paratransit Corporation site located at 829 54th Avenue in Oakland, California. You requested that several temporary borings be installed in the vicinity of the former USTs to delineate the contaminant plume prior to installing monitoring wells. The attached Figure 1 shows the locations of four temporary borings proposed for this investigation. These borings will be advanced using a Geoprobe drill rig. One soil sample will be collected from each boring at the water table. A grab groundwater sample will be collected from the uppermost water-bearing zone. Samples will be analyzed for the same constituents described in the work plan.

Please call me if you have additional questions or concerns in regard to the work plan. If you approve of this approach please provide a letter approving this approach so that we can proceed with this investigation.

Sincerely,

W.A. Craig, Inc.

Tim Cook, P.E.
Principal Engineer
