Subject: Case Closure for Fuel Leak Case No. RO0002635 and GeoTracker Global ID T0600120383,  
Exxon #7-4121, 10605 Foothill Boulevard, Oakland, CA 94605

Dear Ms. Sedlachek and Mr. Jay:

This letter transmits the enclosed underground storage tank (UST) case closure letter in accordance with Chapter 6.75 (Article 4, Section 25299.37[h]). The State Water Resources Control Board adopted this letter on February 20, 1997. As of March 1, 1997, the Alameda County Environmental Health (ACEH) is required to use this case closure letter for all UST leak sites. We are also transmitting to you the enclosed case closure summary. These documents confirm the completion of the investigation and cleanup of the reported release at the subject site. The subject fuel leak case is closed. This case closure letter and the case closure summary can also be viewed on the State Water Resources Control Board's Geotracker website (<http://geotracker.swrcb.ca.gov>) and the Alameda County Environmental Health website (<http://www.acgov.org/aceh/index.htm>).

#### SITE INVESTIGATION AND CLEANUP SUMMARY

Please be advised that the following conditions exist at the site:

- Total petroleum hydrocarbons as gasoline remains in soil at concentrations up to 1.5 ppm.
- Total petroleum hydrocarbons as gasoline remain in soil vapor at concentrations up to 420,000 micrograms per cubic meter.
- As described in section IV of the attached Case Closure Summary, the case was closed with Site Management Requirements that limit future land use to the current land use as a landscaped area without buildings or as a gasoline service station.

If you have any questions, please call Jerry Wickham at (510) 567-6791. Thank you.

Sincerely,

  
Donna L. Drogos, P.E.  
Division Chief

Subject: Case Closure for Fuel Leak Case No. RO0002635 and GeoTracker Global ID T0600120383, Exxon #7-4121, 10605 Foothill Boulevard, Oakland, CA 94605

Dear Ms. Sedlachek and Mr. Jay:

This letter confirms the completion of a site investigation and remedial action for the underground storage tanks formerly located at the above-described location. Thank you for your cooperation throughout this investigation. Your willingness and promptness in responding to our inquiries concerning the former underground storage tank(s) are greatly appreciated.

Based on information in the above-referenced file and with the provision that the information provided to this agency was accurate and representative of site conditions, this agency finds that the site investigation and corrective action carried out at your underground storage tank(s) site is in compliance with the requirements of subdivisions (a) and (b) of Section 25299.37 of the Health and Safety Code and with corrective action regulations adopted pursuant to Section 25299.77 of the Health and Safety Code and that no further action related to the petroleum release(s) at the site is required.

Claims for reimbursement of corrective action costs submitted to the Underground Storage Tank Cleanup Fund more than 365 days after the date of this letter or issuance or activation of the Fund's Letter of Commitment, whichever occurs later, will not be reimbursed unless one of the following exceptions applies:

- Claims are submitted pursuant to Section 25299.57, subdivision (k) (reopened UST case); or
- Submission within the timeframe was beyond the claimant's reasonable control, ongoing work is required for closure that will result in the submission of claims beyond that time period, or that under the circumstances of the case, it would be unreasonable or inequitable to impose the 365-day time period.

This notice is issued pursuant to subdivision (h) of Section 25299.37 of the Health and Safety Code. Please contact our office if you have any questions regarding this matter.

Sincerely,

A handwritten signature in black ink, appearing to read "Ariu Levi".

Ariu Levi  
Director

### III. RELEASE AND SITE CHARACTERIZATION INFORMATION

|  |   |   |
|--|---|---|
| Cause and Type of Release: The cause of the release is unknown. The USTs were reportedly removed between October 20, 1981 and June 15, 1982. However, no tank removal report or other records exist to document the removal. |   |   |
| Site characterization complete? Yes  | Date Approved By Oversight Agency: ---- |   |
| Monitoring wells installed? Yes  | Number: 4                               | Proper screened interval? Yes   |
| Highest GW Depth Below Ground Surface: 15.10 fbgs  | Lowest Depth: 20.75 fbgs                | Flow Direction: The apparent flow direction based on water level measurements in the monitoring wells is to the northwest. However, the regional topography and flow direction is to the southwest. |
| Most Sensitive Current Use: Potential drinking water source.   |   |   |

|   |  |
|---|--|
| Summary of Production Wells in Vicinity: The nearest water supply well is an irrigation well located approximately 1,200 feet east of the site. Based on the cross gradient location and distance from the site, the irrigation well is not expected to be a receptor for the site. Two additional irrigation wells are located approximately 1,700 to 2,000 feet south to southwest of the site. Based on the distance from the site, these two irrigation wells are not expected to be receptors for the site. Six domestic wells are located in the hills approximately 2,000 feet northeast of the site. Based on the upgradient location and distance from the site, the domestic wells are not expected to be receptors for the site. |  |
| Are drinking water wells affected? No   | Aquifer Name: East Bay Plain   |
| Is surface water affected? No   | Nearest SW Name: San Leandro Creek is located approximately 4,700 feet south of the site.        |
| Off-Site Beneficial Use Impacts (Addresses/Locations): None identified.   |  |
| Reports on file? Yes  | Where are reports filed? Alameda County Environmental Health and City of Oakland Fire Department |

| TREATMENT AND DISPOSAL OF AFFECTED MATERIAL |                        |   |                           |
|---|------------------------|---|---------------------------|
| Material                                    | Amount (Include Units) | Action (Treatment or Disposal w/Destination)                              | Date                      |
| Tank  | 3 USTs                 | Not Reported  | October 1981 to June 1982 |
| Piping                                      | Not Reported           | Not Reported  | October 1981 to June 1982 |

- (4) MTBE, TAME, DIPE, ETBE, EDB, EDC < 0.5 ppb; TBA < 10 ppb.

#### Site History and Description of Corrective Actions:

The site is currently an open landscaped area with no structures that is located on the south corner of the intersection of foothill Boulevard and 106<sup>th</sup> Avenue in Oakland, CA. Adjacent land use includes a shopping center and residential homes.

The property was used as a gasoline service station between 1958 and 1982. According to 1964 site plans from the City of Oakland Building Department, three underground storage tanks (USTs) were present in the southwestern corner of the property and two dispenser islands were located on the northern side of the property. The USTs were reportedly removed between October 20, 1981 and June 15, 1982. However, no tank removal report or other records exist to document the removal.

Soil type is relatively uniform throughout the site and consists of clay and clayey silt to approximately 18 feet below ground surface (fbgs) over a layer of silt and sandy silt between approximately 18 and 22 fbgs.

On March 19, 2004, four soil borings (SB-1 through SB-4) were advanced in the area of the former USTs and dispenser islands to depths ranging between 8 to 22 fbgs. Four soil and two grab groundwater samples were collected from the borings. The two soil samples collected from the former dispenser area (SB-3 and SB-4) did not contain Total Petroleum Hydrocarbons as gasoline (TPHg), Total Petroleum Hydrocarbons as diesel (TPHd), or benzene, toluene, ethylbenzene, or xylenes (BTEX) at concentrations above the reporting limit, with the exception of one detection of 2.1 parts per million (ppm) TPHd. The two soil samples collected from the area of the former USTs contained 1,000 ppm TPHg, 590 ppm TPHd, 0.55 ppm benzene, 11 ppm toluene, 0.92 ppm ethylbenzene, and 2.6 ppm xylenes. The two groundwater samples were both collected from the former UST area and contained up to 3,200 parts per billion (ppb) TPHg, 4,200 ppb TPHd, 250 ppb benzene, and 71 ppb xylenes.

On May 26 and 27, 2005, nine soil borings (SB-5 through SB-13) were advanced throughout the site, surrounding the former UST and dispenser areas. At least three soil samples were collected from each boring at depths ranging between 5 and 25 fbgs. One groundwater sample was collected from each boring. The deeper soil samples, collected between 24.5 and 25 fbgs contained the greatest contaminant concentrations. The soil sample collected from boring SB-9, located near the northeastern boundary of the property, at 24.5 fbgs contained TPHg at a maximum concentration of 279 ppm. The grab groundwater samples collected at 20 fbgs and south of the former UST area contained up to 2,250 ppb TPHg and 701 ppb TPHd. The highest concentration of TPHd was 801 ppm, detected in the SB-8 grab groundwater sample located within the former dispenser area.

Between May 1, 2006 and May 3, 2006, seventeen soil borings (SB14 through SB21 and V1 through V10) were advanced for the collection of soil vapor, soil, and groundwater samples. At least four soil samples and one groundwater sample were collected from individual borings SB14 through SB21. Soil vapor samples were collected in wells V1 through V10 in addition to seven total soil samples from shallow vapor wells V3, V4, V5, and V8. Results of the soil and groundwater sampling indicate that a majority of the soil contamination is contained between 15 and 20 fbgs within and west of the former UST area. The greatest TPHg and benzene soil vapor samples were collected from VP10, located near the former UST area, at concentrations up to 17,000,000 micrograms per cubic meter ( $\mu\text{g}/\text{m}^3$ ) and 1,900  $\mu\text{g}/\text{m}^3$ , respectively.

Four groundwater monitoring wells (MW-1 through MW-3, and MW-5) and five soil vapor monitoring wells were installed between January 22 and 24, 2007. Soil samples were collected from groundwater monitoring well borings at two foot intervals between depths of 6 and 26.5 fbgs. One soil sample was collected from each vapor monitoring well at 5.5 fbgs. The greatest soil contamination was detected approximately 20 feet northeast of the former USTs in the MW-2 boring at a depth of 26 fbgs, which contained 964 ppm TPHg, 10.6 ppm TPHd, and 44 ppm benzene.

Soil vapor monitoring wells VW6 through VW12 were installed on March 23, 2009 and sampled on March 27, 2009. Environmental Screening Levels (ESLs) for residential land use were exceeded for either TPHg or benzene in soil vapor from wells VW2 and VW7 through VW12. The maximum concentrations in soil vapor were 4,400,000  $\mu\text{g}/\text{m}^3$  TPHg, 150  $\mu\text{g}/\text{m}^3$  benzene, 1,700  $\mu\text{g}/\text{m}^3$  toluene, and 5,300  $\mu\text{g}/\text{m}^3$  1,1-Difluoroethane (1,1-DFA).

Site History and Description of Corrective Actions (Continued):

On February 16 through 19 and 26, 2010, five 20-foot deep, connected slots were excavated over an area that encompassed the former USTs. A pre-excavation soil investigation (borings PB1 through PB4) took place on January 26, 2010 to define the areas with residual contamination and evaluate the geotechnical stability of the soil. Confirmation soil samples were collected from the outer sidewalls of each slot at a depth of 15 fbs. The greatest detections in the confirmation soil samples were 1,300 ppm TPHg and 200 ppm TPHd, which were collected from the eastern sidewall of the excavation. Due to these elevated concentrations, the eastern sidewall was extended several feet and sampled. Soil samples collected from the extended eastern excavation did not contain TPHg or TPHd at concentrations above the reporting limit.

Soil vapor sampling was conducted in all remaining vapor monitoring wells on October 12, 2010 to examine the potential for vapor intrusion at the site. Four wells were not sampled due to either water in the wells or low-flow conditions. Well VW2, which is near the western property boundary, contained TPHg at a concentration of 190,000  $\mu\text{g}/\text{m}^3$  but did not contain benzene at a concentration above the reporting limit of 8.2  $\mu\text{g}/\text{m}^3$ . The western property boundary is bordered by residential properties.

On January 19, 2011, another round of soil vapor monitoring was conducted in wells VW2 and VW11 to provide additional information on soil vapor near the western property boundary and in the area of the former dispensers. Attempts were made to sample wells VW3 and VW4, but were unsuccessful due to water in the wells. Soil vapor from well VW2 contained concentrations below 9,900  $\mu\text{g}/\text{m}^3$  TPHg. The soil vapor sample from well VW11, located within the former dispenser area, contained 420,000  $\mu\text{g}/\text{m}^3$  TPHg.

Four vapor monitoring wells in the northern portion of the site were sampled on October 11, 2011. All other vapor monitoring wells were not sampled due to perched groundwater in the wells. The maximum concentration of TPHg in soil vapor 110,000  $\mu\text{g}/\text{m}^3$  in soil vapor monitoring well VW-5, which is near the former USTs.

Due to persistent perched water in several vapor monitoring wells, four replacement wells (VW3R, VW4R, VW11R, and VW12R) were installed. Soil vapor sampling occurred on December 29 and 30, 2011. Soil vapor collected along the western property boundary adjacent to a residential property, contained 330  $\mu\text{g}/\text{m}^3$  TPHg and 8.3  $\mu\text{g}/\text{m}^3$  benzene. Soil vapor collected from VW-11 near the dispenser area contained 220,000  $\mu\text{g}/\text{m}^3$  TPHg but benzene was not present above the reporting limit. TPHg soil vapor concentrations along the adjacent residential boundary have shown a decreasing trend over the past five years, during which time oxygen concentrations have increased and constituent concentrations have decreased.

Groundwater monitoring was conducted quarterly from March 2007 to December 2008, then semi-annually up to March 2010. Groundwater concentrations have decreased since 2007. During the most recent groundwater sampling event in March 2010, the maximum concentration of TPHg and MTBE were 520 and 0.72 ppb, respectively. Benzene was not present in groundwater at concentrations above the reporting limit during the most recent groundwater monitoring event.

**IV. CLOSURE**

V. ADDITIONAL COMMENTS, DATA, ETC.

Considerations and/or Variances:

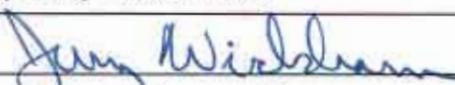

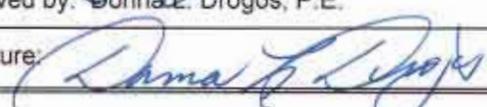

Elevated concentrations of TPHg were detected in soil vapor samples collected in the area of the former dispensers. Although TPHg has been detected at elevated concentrations in the area of the former dispensers, the concentration of benzene detected in soil vapor during recent sampling events does not exceed Environmental Screening Levels for residential land use. Any future site development plans that include structures within the area of the dispensers will need to evaluate the potential for vapor intrusion to indoor air. Soil vapor samples collected along the western boundary of the site appear to indicate that the site does not pose a risk of vapor intrusion to nearby structures.

All required analyses for unknown USTs were not performed.

Conclusion:

Alameda County Environmental Health staff believe that the levels of residual contamination do not pose a significant threat to water resources, public health and safety, and the environment under the current land use as a landscaped area with no buildings. No further investigation or cleanup for the fuel leak case is necessary at this time. However, as specified in the Site Management Requirements, re-evaluation of this case may be required if land uses changes to any residential to any residential land use, commercial land use other than a gasoline service station, or other conservative land use occurs at this site; or construction or excavation activities take place or the building structure is otherwise modified. ACEH staff recommend closure for this site.

VI. LOCAL AGENCY REPRESENTATIVE DATA

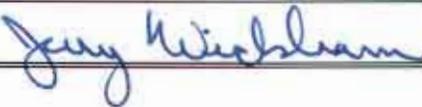

|  |  |
|--|--|
| Prepared by: Jerry Wickham, P.G.   | Title: Senior Hazardous Materials Specialist |
| Signature:  | Date: 07/03/12                               |
| Approved by: Donna L. Drogos, P.E.   | Title: Division Chief                        |
| Signature:  | Date: 07/03/12                               |

This closure approval is based upon the available information and with the provision that the information provided to this agency was accurate and representative of site conditions.

Notes:

- TPHd = Total petroleum hydrocarbons as diesel analyzed using EPA Method 8015B; prior to 2010, analyzed using EPA Method 8021B.
- TPHg = Total petroleum hydrocarbons as gasoline analyzed using EPA Method 8015B; prior to 2010, analyzed using EPA Method 8021B.
- MTBE = Methyl tertiary butyl ether analyzed using EPA Method 8015B; prior to April 2005, analyzed using EPA Method 8260B.
- BTEX = Benzene, toluene, ethylbenzene, and total xylenes analyzed using EPA Method 8021B, unless otherwise noted.
- DIPE = Di-isopropyl ether analyzed using EPA Method 8260B.
- ETBE = Ethyl tertiary butyl ether analyzed using EPA Method 8260B.
- TAME = Tertiary amyl methyl ether analyzed using EPA Method 8260B.
- TBA = Tertiary butyl alcohol analyzed using EPA Method 8260B.
- 1,2-DCA = 1,2-dichloroethane analyzed using EPA Method 8260B.
- EDB = 1,2-dibromoethane analyzed using EPA Method 8260B.
- Lead = Lead analyzed using EPA Method 6010B.
- mg/kg = Milligrams per kilogram.
- < = Less than the stated laboratory reporting limit.
- = Not measured/Not sampled/Not analyzed.
- a = Analyzed by EPA Method by 8260B.
- b = Analyte was detected at a concentration below the reporting limit and above the laboratory method detection limit. Reported value is estimated.
- c = Secondary ion abundances were outside method requirements. Identification based on analytical judgment.

- Notes:
- TPHd = Total petroleum hydrocarbons as diesel analyzed using EPA Method 8015B; prior to 2010, analyzed using EPA Method 8021B.
  - TPHg = Total petroleum hydrocarbons as gasoline analyzed using EPA Method 8015B; prior to 2010, analyzed using EPA Method 8021B.
  - MTBE = Methyl tertiary butyl ether analyzed using EPA Method 8015B; prior to April 2005, analyzed using EPA Method 8260B.
  - BTEX = Benzene, toluene, ethylbenzene, and total xylenes analyzed using EPA Method 8021B, unless otherwise noted.
  - DIPE = Di-isopropyl ether analyzed using EPA Method 8260B.
  - ETBE = Ethyl tertiary butyl ether analyzed using EPA Method 8260B.
  - TAME = Tertiary amyl methyl ether analyzed using EPA Method 8260B.
  - TBA = Tertiary butyl alcohol analyzed using EPA Method 8260B.
  - 1,2-DCA = 1,2-dichloroethane analyzed using EPA Method 8260B.
  - EDB = 1,2-dibromoethane analyzed using EPA Method 8260B.
  - Lead = Lead analyzed using EPA Method 6010B.
  - mg/kg = Milligrams per kilogram.
  - < = Less than the stated laboratory reporting limit.
  - = Not measured/Not sampled/Not analyzed.
  - a = Analyzed by EPA Method by 8260B.
  - b = Analyte was detected at a concentration below the reporting limit and above the laboratory method detection limit. Reported value is estimated.
  - c = Secondary ion abundances were outside method requirements. Identification based on analytical judgment.

 Former Exxon Service Station 74121  
 10805 Foothill Boulevard  
 Oakland, California  
 (Page 3 of 3)

|                     |   |  |
|---------------------|---|--|
| Notes:              | = | Greater than or equal to the most stringent, applicable, commercial environmental screening level. |
| <b>Bold</b>         | = | Total petroleum hydrocarbons as gasoline analyzed using EPA Method TO-3M.                          |
| TPHg                | = | Methyl tertiary butyl ether analyzed using EPA Method TO-15.                                       |
| MTBE                | = | Benzene, toluene, ethylbenzene, o-xylenes, and m-xylenes analyzed using EPA Method TO-15.          |
| BTEX                | = | 1,1-difluoroethane analyzed using EPA Method TO-15.  |
| 1,1-DFA             | = | Methane analyzed using EPA Method 8015M; prior to 2011, analyzed using ASTM D-1946.                |
| Methane             | = | Oxygen plus argon analyzed using ASTM Method D-1946.   |
| O <sub>2</sub> + Ar | = | 1,2-dibromoethane analyzed using EPA Method TO-15.   |
| EDB                 | = | 1,2-dichloroethane analyzed using EPA Method TO-15.  |
| 1,2-DCA             | = | Tertiary amyl methyl ether analyzed using EPA Method TO-15.  |
| TAME                | = | Tertiary butyl alcohol analyzed using EPA Method TO-15.  |
| TBA                 | = | Ethyl tertiary butyl ether analyzed using EPA Method TO-15.  |
| ETBE                | = | Di-isopropyl ether analyzed using EPA Method TO-15.  |
| DIPE                | = | Ethanol analyzed using EPA Method TO-15.   |
| Ethanol             | = | Additional volatile organic compounds analyzed using EPA Method TO-15.                             |
| Add'l VOCs          | = | Oxygen analyzed using ASTM 1945-46.  |
| O <sub>2</sub>      | = | Vacuum measured using a vacuum gauge.  |
| Vacuum              | = | Inches of mercury.   |
| In Hg               | = | Micrograms per meter cubed.  |
| µg/m <sup>3</sup>   | = | Not detected.  |
| ND                  | = | Less than the stated laboratory reporting limit.   |
| <                   | = | Not applicable/Not specified.  |
| —                   | = | Soil vapor samples were collected without purging.   |
| a                   | = | Soil vapor samples were not collected due to the presence of water.                                |
| b                   | = | Trimethylbenzene   |
| c                   | = | 1,2,4 Trimethylbenzene   |
| d                   | = | Chloroform   |
| e                   | = | 1,3,5 Trimethylbenzene   |
| f                   | = | Acetone.   |
| g                   | = | Carbon disulfide.  |
| h                   | = |  |

TABLE 2 GROUNDWATER MONITORING DATA, FORMER EXXON RETAIL SITE 74121, 10605 FOOTHILL BOULEVARD, OAKLAND, CALIFORNIA

Notes: MTBE analyzed by EPA Method 8260B unless otherwise indicated.

- a Calibration verification recovery was above the method control limit for this analyte. Analyte not detected, data not impacted.
- b Laboratory control sample and/or laboratory control sample duplicate recovery was above the acceptance limits. Analyte not detected, data not impacted.
- c Initial analysis within holding time. Reanalysis for the required dilution or confirmation was past holding time.
- d The relative percent difference between the primary and confirmatory analysis exceeded 40%. Per EPA Method 8000B, the higher value was reported.
- e Does not match typical pattern.
- f Analyte was detected at a concentration below the reporting limit and above the laboratory method detection limit. Reported value is estimated.
- g Analyte presence was not confirmed by second column or GC/MS analysis.
- h The sample chromatographic pattern for TPH does not match the chromatographic pattern of the specified standard. Quantitation of the unknown hydrocarbon(s) in the sample was based upon the specified standard.

- 1,2-DCA 1,2-Dichloroethane.
- DIPE Diisopropyl ether.
- EDB 1,2-Dibromoethane.
- ETBE Ethyl tertiary butyl ether.
- MTBE Methyl tertiary butyl ether.
- TAME Tertiary amyl methyl ether.
- TBA Tertiary butyl alcohol.
- TPH-d Total Petroleum Hydrocarbons as diesel analyzed by EPA Method 8015B.
- TPH-g Total Petroleum Hydrocarbons as gasoline analyzed by EPA Method 8015B.
- µg/L Micrograms per liter.

a Methyl tertiary butyl ether by EPA Method 8021B.  
b Depth of grab groundwater sample.  
c Hydrocarbon pattern is present within the requested fuel quantitation range but does not resemble the pattern of the requested fuel.

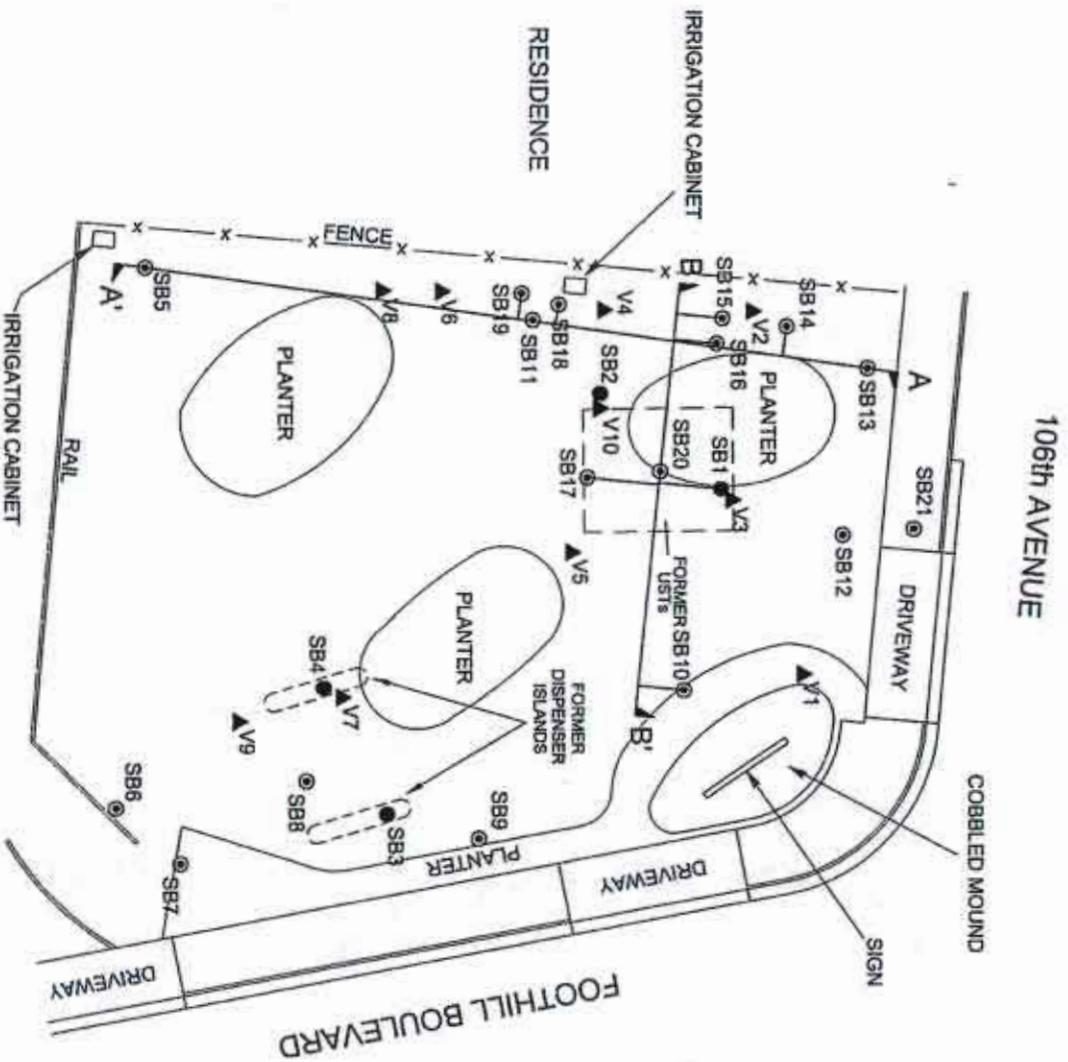

MTBE Methyl tertiary butyl ether analyzed by EPA Method 8260B unless otherwise indicated.  
NA Not analyzed.  
ND Not detected at or above laboratory reporting limits.  
TPH-g Total Petroleum Hydrocarbons as gasoline analyzed by EPA Method 8015B.  
TPH-d Total Petroleum Hydrocarbons as diesel analyzed by EPA Method 8015B.  
VOCs Tert-amyl methyl ether, 1,2-dibromoethane, 1,2-dichloroethane, ethyl tert-butyl ether, diisopropyl ether, and tertiary butyl alcohol analyzed by EPA Method 8260B.

µg/L Micrograms per liter.

SURFACE CONDITIONS: Concrete

DESCRIPTION BY: T. Iob

0 - SILTY CLAY, dark olive brown (2.5Y 3/3), soft, firm, low plasticity, some fine sand, moist to dry

8 - SILTY CLAY, light olive brown (2.5Y 5/6), hard, very low plasticity, trace fine sand, dry

CL

15 - Color change to dark olive gray (5YR 3/2)

18 - Color change to olive brown with iron staining (2.5Y 4/3)

19 - SAND, olive brown (2.5Y 4/3), medium dense, fine sand, moist

SURFACE CONDITIONS: Top Soil/Wood Chips

DESCRIPTION BY: M. Garcia

**SILTY CLAY** - black (10YR 2/1) mottled with dark yellowish brown (10YR 4/6), very stiff, low plasticity, moist.  
  
- color becomes dark yellowish brown (10YR 4/6), moist to wet.  
  
Boring terminated at 6 feet bgs.

# BORING LOG VW11R

(Page 1 of 1)

Date Drilled: 12/19/2011  
 Drilling Co.: Cascade Drilling L.P.  
 Drilling Method: Hand Auger  
 Sampling Method: Hand Auger  
 Borehole Diameter: 3.25"  
 Casing Diameter: 0.25"  
 Location N-S: 2' South of VW11  
 Location E-W: 0.5' West of VW11  
 Total Depth: 5 ft. bgs  
 First GW Depth: N/A

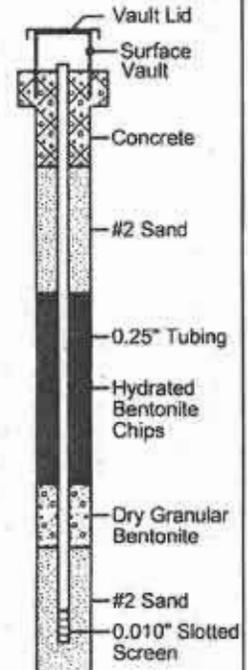

Project No.: Former Exxon Service Station 74121  
 Site: 10605 Foothill Boulevard, Oakland, CA  
 Logged By: Alex Snyder
