RE: Redwood Christian Schools, 4200 James Street, Castro Valley, CA - 94546

Dear Mr. Gaither:

I am in receipt of the "Additional Soil Sampling report", dated October 27, 1997 prepared by Gettler-Ryan Inc, for the above referenced site. This additional sampling was completed in response to a request made by this Department in a letter dated September 15, 1997. In October 1997, two samples were collected at approximately two feet bgs from areas where highest concentrations of TPH was previously identified, and analyzed for both TPH and Poly Nuclear Aromatics (PNA's). The results of the laboratory analysis did not indicate the presence of any PNA's or significant amount of petroleum hydrocarbons. Hence the TPH contamination identified previously appears to be surficial in extent.

Based on the information submitted to this Department, the site does not pose a threat to public health or the environment and hence no further action is required on the site.

If you have any questions, you may reach me at (510) 567-6764.

Sincerely,

Madhulla Logan
Hazardous Material Specialist
