Subject: RO278 - off site contamination on Signature Property site
Entry Type: Phone call
Start: Tue 3/30/2004 4:56 PM
End: Tue 3/30/2004 4:56 PM
Duration: 0 hours

1042a - Glen Leong, Treadwell & Rollo re: Desert Petroleum, site couple blocks away, benzene & MTBE in shallow GW, residential development 874-4500 x554

Please send me well logs & analytical data to review, he will

4/16, 130p, leave msg for PE, Glen returns call, discuss site
He just reviewed file for RO278 today not reviewed prior to issuing report.

TPH pollution appears related to RO278
Solvents, some question of source location. Asked for map showing location of dry cleaners to identify if unknown source. I have call into RWQCB re: solvent detections & potential for unknown site

Discussed 42' depth of GW samples, they selected an arbitrary depth, did not log geology at site did not review data from adjacent site, have only 1 gw sample collected do not know extent of plume how can they make the conclusion that site poses no risk? Not enough data to make that conclusion.

He agreed, they made a conclusion on the limited data they had. I said they did not have enough data to make any conclusion about risk at site.

Sampling insufficient to determine if old USTs near arrow rentals leaked, sampling performed at 1' & 5' bgs above UST inverts.

I wanted to discuss the data with the prof. in resp. charge --> Mike. Additionally the report is not stamped, need stamped signature page. He will address this.

Will call him back re: solvent issue after I discuss w/RWQCB next week.
