

Spoke to Dean Di Giovanni to remind 10/18/94  
him that restoration work should not be  
implemented before the county determines the potential  
extent of soil contamination and the City of Alameda  
addresses the problem. Also, I stated that a more  
detailed work plan addendum would need to be  
submitted outlining safety measures for restoration  
if & when it is ready to be implemented. - J.S.

## PHONE LOG (KRUSI PARK)

9/27/94

Dean Di Giovanni (510) 287-1656

Discussed my comments on report, outlined in today's letter to EBWD. Asked why the TRPH analysis results were not included in report. He stated that the TRPH levels given in tables is the addition of the semi-volatile contaminants detected. Mr. Di Giovanni stated that vehicles will be driving over ~~right~~ in areas around the ball field ~~too~~, & that EBWD intends to restore these damaged areas of turf after the basin construction. I reminded him to be sure & water all soils down during activities & recommended the use of a dust meter. Mr. Di Giovanni stated that the Merritt Sand would be placed around the basin. I required an impermeable layer to prevent cross-contamination from perched water in fill to Merritt Sand.

## PHONE LOG

9/22/94 Dean Di Giovanni 287-1656 Mr. Di Giovanni stated that the property that the pump house is on is owned by EBWD. The rest of the park property is owned by the City of Alameda.

9/29/94 Spoke to Richard Lykes and Alex Coate, EBWD Clarified question regarding whether or not EBWD would be financing investigations and cleanup in the areas of Kusi Park, outside of the storage basin construction. They said no. I explained them that it would be that portion of the site would be transferred to SLIC w/ City of Alameda as RPs. EBWD stated that they just promised to restore damaged areas in Negative Declaration.
