**Re: No Further Action at 2400 Baumann Avenue, San Lorenzo, CA**

Dear Mr. Yuh:

This letter confirms the completion of site investigation and remedial action for the lead-impacted soil at the above referenced address.

In 1996 a Phase I and Phase II environmental assessment was conducted at the site. Lead-impacted soil was identified in the vicinity of the south canopy area. A grab groundwater sample collected from this area did not contain dissolved lead. Approximately four cubic yards of contaminated soil was excavated from this area in June 2000. Confirmation soil samples collected after remediation indicated that the elevated concentration of lead in shallow soil was removed.

Based upon the available information and with the provision that the information provided to this agency was accurate and representative of site conditions, no further action related to the surface contamination by lead is required.

If you have any further questions concerning this matter, please contact Ms. eva chu at (510) 567-6762.

Sincerely,

Mee Ling Tung, Director
