

Meeting on 12/1/23

Action Plan for Steam Valve

- ① Take more soil samples & run a WET test.
- ② Get Ground water info on from MWells on site which include gradient info
- ③ If G.W. ^{wells} are downgradient then its OK. but if G.W wells are upgradient then I have to ask them to install monitoring wells.
- ④ Talk to Ravi and get his ideas on this site - may be or maybe not.
- ⑤ I told him, lets divide this into soil & G.W. situation. If ~~soil~~ soil comes out clean, then we can give a closure, asking them to submit quarterly monitoring data for atleast a year.
