Dear Dr. Arulanantham:

This letter reports the analytical results of supplemental soil sampling conducted at the subject site on behalf of The Plymouth Group (Plymouth), of Mountain View, California, by Geomatrix Consultants, Inc. (Geomatrix) on 7 and 12 August 1992. The objective of the soil sampling plan and chemical analyses was to further evaluate the presence of pesticides in shallow soil. As you requested in our meeting of 29 June 1992, the plan included the collection of four surface soil samples (0 to 6 inches below ground surface), and six near-surface soil samples from approximately 18 inches below ground surface to augment initial soil sampling results from a 1.8-acre area proposed for residential development by Plymouth.

The soil sampling locations are identified on the attached site map, Figure 1, along with the locations of previously collected soil samples. The soil samples were collected in clean brass tubes using a hand-held drive sampler and sealed with aluminum foil and plastic end caps, labeled, and stored in ice-cooled chest for transport under Geomatrix chain-of-custody procedures to a state-certified analytical laboratory.

A total of 10 soil samples were collected and analyzed for chlorinated pesticides and polychlorinated biphenyls (PCBs) by Environmental Protection Agency (EPA) Method 8080; organophosphorus pesticides by EPA Method 8140; and carbamates and urea-based pesticides and herbicides by EPA Method 632. In addition, soil samples from two of the locations were collected in glass jars and analyzed for California Code of Regulations Title 22 metals by EPA Methods 6010 and 7000 series. Samples were analyzed by Anametrix, Inc., of San Jose, California; Anresco, Inc., of San Francisco, California; and APPL, Inc., of Fresno, California. Laboratory analytical reports and chain-of-custody documentation are presented in Attachment B.

Results of the suite of analyses are presented in Tables 1 and 2. No EPA Method 8080 compounds were detected above the practical quantitation limit in nine of the ten soil samples; sample A-2 contained 0.026 milligrams per kilogram (mg/kg) of 4,4'-DDE and 0.022 mg/kg of 4,4'-DDT. No EPA Method 8140 compounds were detected above the practical quantitation limit in any of the ten soil samples. No EPA Method 632 compounds were detected above the practical quantitation limit in nine of the ten soil samples; sample A-3 contained 0.03 mg/kg of Diuron. The concentration of metals in samples A-3 and A-4 are considered to be background levels.

Following review of the above results at our 1 September 1992 meeting with you, it is our understanding that these results are acceptable to the Alameda County Health Care Services Agency Division of Hazardous Materials for residential development without restrictions. A plan to control dust from and access to surrounding agricultural chemical-affected sites will be developed with you concurrently with site development. As currently planned, site grading is expected to begin as soon as 8 September 1992. Please contact either of the undersigned if you have any questions or require further information.

Sincerely yours,

QA/QC SUMMARY :

- Sample A-4 was analyzed at 1:2.5 dilution for EPA Method 6010 due to spectral interferences.
- Spike recoveries for sample A-4 for copper by EPA Method 6010 were outside of Anametrix control limits due to high levels present in the unspiked sample.
- Matrix and post digestion spike recoveries for sample A-4 for arsenic by EPA Method 7060, antimony by EPA Method 6010 and selenium by EPA Method 7740 were outside of Anametrix control limits due to matrix effects.
- Spike recoveries for sample A-4 for thallium by EPA Method 7841 were outside of Anametrix control limits due to matrix effects.

COMMENT: Quality control limits for percent recovery are 75-125% and 25% for RPD.

NR : Not reported due to interferences from relatively high background levels in the unspiked sample.

* : Sample concentration of 0.0 indicates that the analyte in the sample was below detection limit for the method. 0.0 is entered for calculations of the percent recovery and RPD only.

This report consists of 11 pages not including the cover letter, and is organized in sections according to the specific Anametrix laboratory group or section which performed the analysis(es) and generated the data. The Report Summary that precedes each section will help you determine which Anametrix group is responsible for those test results, and will bear the signatures of the department supervisor and the chemist who have reviewed the analytical data. Please refer all questions to the department supervisor who signed the form.

Anametrix is certified by the California Department of Health Services (DHS) to perform environmental testing under Certificate Number 1234. A detailed list of the approved fields of testing can be obtained by calling our office, or the DHS Environmental Laboratory Accreditation Program at (415) 540-2800.

If you have any further questions or comments on this report, please give us a call as soon as possible. Thank you for using Anametrix.
