Subject: Quarterly Groundwater Monitoring and Groundwater Extraction and Treatment System Status Report for Del Monte Plant 35 - West Parcel, 4204 Hollis Street, Emeryville, California

Dear Mr. Oliva:

Enclosed is the Quarterly Groundwater Monitoring and Groundwater Extraction and Treatment System Status Report for Del Monte Plant 35 - West Parcel located at 4204 Hollis Street in Emeryville, California. If you have any questions or comments, please call me at (510) 251-2888 (ext. 2118).

Sincerely,

CH2M HILL

## **INTRODUCTION**

This report presents the quarterly groundwater monitoring analytical data and the status of the groundwater extraction and treatment (GET) system located at Del Monte Plant 35 - West Parcel, at 4204 Hollis Street in Emeryville, California.

## **BACKGROUND**

Del Monte Plant 35 is located in an industrial area and was a food processing plant from the late 1920s through 1989. Plant 35 is located on approximately 13 acres; the West Parcel, located at 4204 Hollis Street, is approximately 2 acres in size and the East Parcel, located at 1250 Park Avenue, is approximately 11 acres in size (Figure 1).

Plant 35 is underlaid by approximately 5 to 8 feet of fill which is composed primarily of clay containing gravel. Native silty clay extends from beneath the fill to a depth of approximately 15 to 20 feet below ground surface. This silty clay zone is overlain with silty sand. Shallow groundwater exists beneath the property at a depth of approximately 7 to 10 feet below ground surface.

Del Monte removed four 50-gallon underground tanks from the West Parcel in March 1989 as described in "Property Assessment and Tank Removal Report, Del Monte Plant No. 35, Southwest Corner" (CH2M HILL, September 1989). These tanks were located adjacent to a building that Del Monte had previously leased to medical research companies. The tanks were used to store fuel oil; however, prior to removal of the tanks, tank content sampling revealed the presence of chlorinated hydrocarbon compounds. Subsequent groundwater investigations revealed the presence of chlorinated hydrocarbon compounds in the shallow groundwater in the vicinity of the former fuel oil tank area. Del Monte has been monitoring the groundwater in the vicinity of the former fuel oil tank area since May 1989.

Del Monte demolished and removed the building located at the southwest corner of the West Parcel during December 1992. The removal of this building provided access to soil that could not be removed during the removal of the four fuel oil tanks in 1989.

## **GROUNDWATER MONITORING**

Monitoring wells MW-7, MW-9, MW-10, and MW-11 were sampled on March 30, 1993. Monitoring well MW-8 was removed during construction of the GET system and therefore could not be sampled; however, the groundwater extraction pit is located in the vicinity of the former monitoring well MW-8 location. The monitoring well locations are shown on Figure 1. The analytical results of the March 30, 1993 monitoring event and previous monitoring events are summarized on Table 1. The laboratory report is contained in Attachment A.

The groundwater monitoring results indicate decreasing concentration levels of chlorinated hydrocarbons in monitoring wells MW-10 and MW-11 since the startup of the GET system (January 14, 1993). No significant changes in groundwater quality have

occurred in monitoring wells MW-7 and MW-9. Applicable State of California Maximum Contaminant Levels (MCLs) are included at the bottom of Table 1.

## GROUNDWATER EXTRACTION AND TREATMENT SYSTEM

Del Monte began construction of a GET system on January 11, 1993 and began operating this GET system on January 14, 1993. The objective of the GET system is to extract and treat groundwater containing chlorinated hydrocarbons thereby reducing levels of chlorinated hydrocarbons in the shallow groundwater beneath the West Parcel. Del Monte is planning on operating the GET system for approximately six months.

The GET system extracts groundwater through one of two 16-inch diameter perforated pipes installed in the pea gravel at the bottom of the excavation pit. The extracted groundwater is pumped to a 20,000-gallon covered settling tank to settle out silt and fine sand. An automatic shutoff device does not allow for more than 7,000 gallons of water to be contained within the 20,000-gallon settling tank at any time. After the settling tank, the extracted groundwater gravity flows to a 100-gallon holding tank prior to treatment. Treatment consists of two activated carbon canisters in series. The treated groundwater is then discharged to the sanitary sewer; Del Monte obtained a Wastewater Discharge Permit from the East Bay Municipal Utility District (EBMUD). A schematic of the GET system is shown on Figure 2. Four water sample ports (SP-A, SP-B, SP-C, and SP-D) used to monitor the GET system are also shown on Figure 2.

Del Monte collects monthly water samples from the GET system sample ports. The samples are analyzed for chlorinated hydrocarbons and BTEX. The results of these analyses are summarized on Table 2. The laboratory reports for these samples are included in Attachment B.

The results of the GET system sampling indicate that the GET system is effectively removing chlorinated hydrocarbons prior to discharge; EBMUD's discharge limitation for total chlorinated hydrocarbons is 500 µg/l. BTEX compounds have not been detected in any of the GET system samples collected.

According to Table 2, chlorinated hydrocarbons were detected in the effluent stream of the first carbon canister (SP-B) on February 26, 1993 and in the effluent stream of the second carbon canister (SP-A) on April 6, 1993. However, total chlorinated hydrocarbon concentrations in the GET system influent have not exceeded EBMUD's discharge criteria since startup of the GET system. Therefore, the existing carbon canisters are currently not scheduled to be replaced.

As of April 13, 1993, the GET system extracted and treated 477,251 gallons of water at a rate of approximately 4 gallons per minute. GET system inspection logs are contained in Attachment C.

## **FUTURE ACTIVITIES**

System operation and maintenance inspections will be conducted weekly and future GET system water samples will be collected monthly. The next quarterly monitoring well sampling event is scheduled for June 30, 1993 and the next quarterly report is scheduled to be prepared by July 30, 1993.

## BATCH QC REPORT: Definitions and Terms

BCA

Accuracy	The ability of a procedure to determine the "true" concentration of an analyte
Precision	The reproducibility of a procedure demonstrated by the agreement between analyses performed on either duplicates of the same sample or a pair of duplicate spikes
Batch	A group of twenty samples or less, of similar matrix type, prepped together or analyzed together if no sample preparation is required, under the same conditions and with the same reagents. The batch must include a method blank, LCS and matrix QC.
Laboratory Control Standard (LCS)	A blank that is spiked with a known amount of analyte and subjected to the same procedures as the samples. The LCS indicates the accuracy of the analytical method. It also serves to double-check the calibration because it is prepared from a different source than the standard used to calibrate the instrument.
Matrix QC	Quality control tests performed on actual client samples. The matrix spike is a client's sample spiked with known compounds and subjected to the same procedures as the samples. For most analyses, the laboratory performs matrix spikes in duplicate (duplicate spikes).
Method Blank	A sample that contains no analyte. For water analysis, organic-free or deionized water is used. For solids analysis, analyte-free solvent is used. The method blank serves to measure contamination associated with laboratory storage, preparation or instrumentation.
Batch Number	Numeric designation for a batch of samples and the associated QC. The batch number sequence is unique for each determination.
LC Result	Laboratory result of an LCS analysis
LT Result	Expected result, or true value, of the LCS analysis
Percent Recovery	The percentage of analyte recovered. For LCS, the percent recovery is: $\text{LC/LT} \times 100$
LC1, LC2 Result	Result of analyzing two separately prepared LCSs, with LC1 indicating one LCS and LC2 indicating the second LCS; used to determine precision.
R1, R2 Result	Result of analyzing replicate aliquots of a sample, with R1 indicating the first analysis of the sample and R2 its corresponding duplicate; used to determine precision.
S1, S2 Result	Result of the analysis of replicate spiked aliquots, with S1 indicating one spike of the sample and S2 the second spike; used to determine precision and accuracy.
Relative Percent Difference (RPD)	Calculated using one of the following:
	$\frac{(R1 - R2) \times 100}{(R1 + R2) \div 2}$
	$\frac{(S1 - S2) \times 100}{(S1 + S2) \div 2}$
	$\frac{(LC1 - LC2) \times 100}{(LC1 + LC2) \div 2}$
S1, S2 Recovery	The percentage of analyte recovered. The percent recovery calculation is: $\text{S1 Recovery: } \frac{(S1 - R1) \times 100}{(\text{True} - R1)}$ $\text{S2 Recovery: } \frac{(S2 - R1) \times 100}{(\text{True} - R1)}$
True value	The theoretical, or expected, result of a spike sample analysis.
Blank Result	Laboratory result of analysis of the method blank.
RDL (Reporting Detection Limit)	BCA-assigned limit based on, but not the same as, method detection limits (MDLs) determined using EPA guidelines. Sample RDLs may differ from the blank RDL if the samples were diluted.

NOTIFICATION OF TEST RESULTS

RECEIVED

MICHAEL J. WALLIS  
DIRECTOR OF WASTEWATER

February 19, 1993

FEB 24 1993

CH2M HILL  
SAN FRANCISCO

Del Monte Plant 35  
c/o CH2M HILL  
1111 Broadway Suite 1200  
Oakland, CA 94607-4046

Sample Location: SS No. 1  
Lab Number: 930119153  
Sample Type: Grab @ 1413

Attention: Mr. Bern Baumgartner

Account No. 502-65111

EBMUD inspected your facility and sampled the wastewater discharged on January 19, 1993. The test results and corresponding discharge permit limitations are shown in the table below. No discharge limit violations were noted.

<u>Parameter</u>	<u>Test Result</u> mg/L	<u>Limitation</u> mg/L
Benzene	< 0.0005	0.005
Toluene	< 0.001	0.012
Ethylbenzene	< 0.001	0.005
Xylenes	< 0.001	0.011

If you have any questions regarding the inspection or the sample results, please contact me at (510)287-0333.

Sincerely,

A handwritten signature in black ink, appearing to read "Stan Archacki".

# NOTIFICATION OF TEST RESULTS

EAST BAY  
MUNICIPAL UTILITY DISTRICT

MICHAEL J. WALLIS  
DIRECTOR OF WASTEWATER

April 5, 1993

Del Monte Plant 35  
c/o CH2M HILL  
1111 Broadway Suite 1200  
Oakland, CA 94607-4046

Sample Location: SS No. 1  
Lab Number: 930322127  
Sample Type: Grab @ 1007

Attention: Mr. Bern Baumgartner

Account No. 502-65111

EBMUD inspected your facility and sampled the wastewater discharged on March 22, 1993. The test results and corresponding discharge permit limitations are shown in the table below. No discharge limit violations were noted.

<u>Parameter</u>	<u>Test Result</u> <u>mg/L</u>	<u>Limitation</u> <u>mg/L</u>
Benzene	< 0.0005	0.005
Toluene	< 0.001	0.012
Ethylbenzene	< 0.001	0.005
Xylenes	< 0.001	0.011

If you have any questions regarding the inspection or the sample results, please contact me at (510)287-0333.

Sincerely,

Stan Archacki  
Wastewater Control Representative  
Source Control Division

SAA:saa

Total GET Effluent 215.161 gal. 10:26 time  
Time req'd: 20 min.

GFT System:

Please record the pressure gauge reading at each of the following locations:

Before bag filter: 10 psi.  
After bag filter: 11.5 psi.

If the pressure differential across the bag filter is greater than 15 psi., was the filter bag exchanged? Yes        No ✓

Were all valves opened after replacing the filter bag?

Yes        No       

Were pumps turned ON after replacing the filter bag?

Yes        No       

Were any leaks (standing water or wet spots) seen that originated from GET System piping? Yes        No
