Re: Field sampling at

GALILEO-CAPRI SALAMI, INC.
2411 BAUMANN AVENUE
SAN LORENZO, CA

JANUARY 7, 1988

SAMPLING REPORT

Field sampling was undertaken in accordance with State and local enforcement agency standards and requirements for objective analytical information on the levels of residual contaminants found outside the primary containment structure. This project concerned the following:

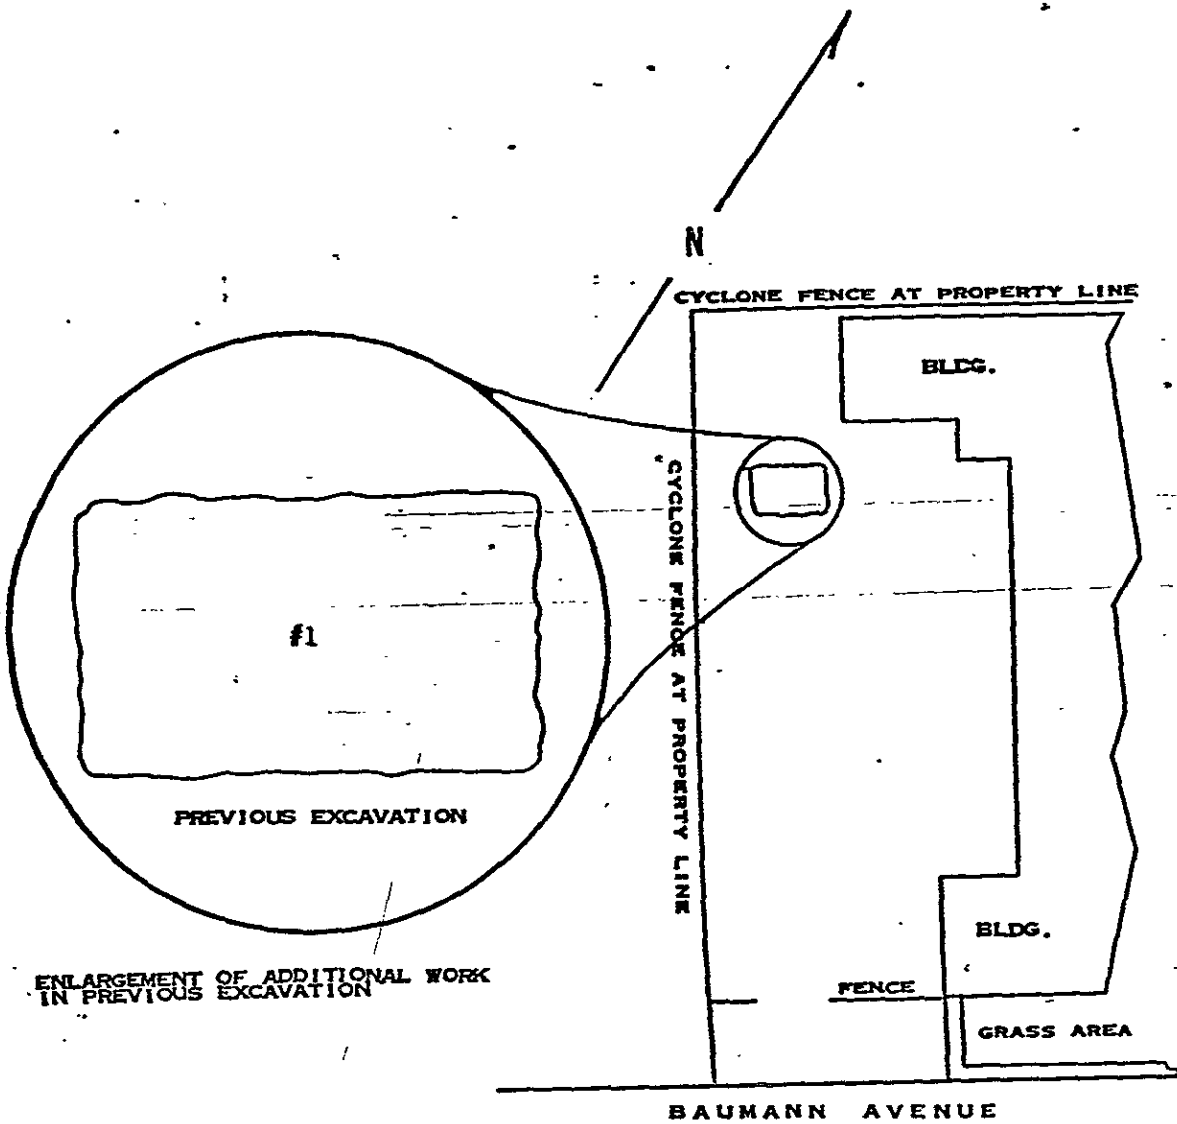

SAMPLING OF AERATED WATER IN THE PIT WHERE TANKS HAD PREVIOUSLY
BEEN REMOVED
(Reference: Blaine Tech Services Report 87345C1 & 87362F2)

Tanks previously removed -- one 10,000 gallon gasoline
one 10,000 gallon diesel

Sampling was performed in accordance with approved methodology at the locations shown on the accompanying site diagram. Additional information is presented on the diagram including our field sampling designations and the lab identification numbers which reference the analytical results which will be found in the separate laboratory report. Sample material was collected in special containers appropriate to the type of analysis intended. Sample containers were sealed, chilled, and transported to the laboratory with standard chain of custody records maintained at each transmittal. This sampling report, the chain of custody, and the analytical report comprise the formal documentation of the sampling conducted during this phase of work at the site.
