

12/22

Spoke to Pete Johnson and informed him there was 910 P/B of gas and 600 P/B of diesel in the water after two underground tanks were full. He wants to receive the lab report with his staff concerning possible installation of a monitoring well. ~~At this point~~

~~At this point~~ Grey Zenter called and informed me that the water in the pit should be pumped out, then resample the new water. If any detection of contamination monitoring well must be installed.
