Re: Subsurface Investigation Report
Shell-branded Service Station
506-510 International Boulevard (510 East 14th Street)
Oakland, California
SAP Code 135695
Incident No. 97601734

Dear Mr. Wickham:

Attached for your review and comment is a copy of the *Subsurface Investigation Report* for the above referenced site. Upon information and belief, I declare, under penalty of perjury, that the information contained in the attached document is true and correct.

If you have any questions or concerns, please call me at (707) 865-0251.

Sincerely,

A handwritten signature in black ink, appearing to read "Denis L. Brown".

Re: **Subsurface Investigation Report**
Shell-branded Service Station
506-510 International Blvd. (510 E. 14th Street)
Oakland, California
Incident #97601734
Cambria Project #247-0898-006

Dear Mr. Wickham:

On behalf of Equilon Enterprises LLC dba Shell Oil Products US (Shell), Cambria Environmental Technology, Inc. (Cambria) prepared this report to document the recent subsurface investigation activities at the referenced site. The purpose of the investigation was to vertically profile the site's lithology and to determine the nature and extent of hydrocarbon impact to soil and groundwater. Cambria followed the scope of work presented in the July 6, 2005 *Subsurface Investigation Work Plan*. Alameda County Health Care Services Agency's (ACHCSA) August 17, 2005 letter to Shell approved the proposed work and requested that some borings be relocated. Cambria submitted a revised boring locations map in an August 24, 2005 e-mail. The revision was approved in ACHCSA's August 24, 2005 e-mail. Cambria performed the work in accordance with ACHCSA and San Francisco Regional Water Quality Control Board (RWQCB) guidelines.

SITE LOCATION AND DESCRIPTION

The site is an active Shell-branded service station located at the International Boulevard (formerly East 14th Street) and 5th Avenue intersection in Oakland, California (Figures 1 and 2). City property records indicate that the parcel's address is listed as 506 14th Street in the County Assessor's records. Land use in the surrounding area is mixed commercial and residential. The service station layout includes a station building, two dispenser islands, and a gasoline underground storage tank (UST) complex (Figure 2).

PREVIOUS WORK

1990 Subsurface Investigation: On September 19, 1990, Weiss Associates of Emeryville, California (Weiss) submitted a letter to Shell presenting a scope of work for a subsurface investigation to determine if a 550-gallon underground waste oil storage tank was still present at the site. The proposed scope of the investigation included removing a concrete pad and probing the subsurface. Weiss states in the letter that Shell would be notified if the tank was present and that a scope of work for its removal would be submitted. Neither of these documents has been located. No other documents in Shell's or Cambria's files indicate whether the proposed investigation was conducted.

1993 Tank Excavation Sampling: On March 30, 1993, the 550-gallon underground waste oil storage tank was removed from the site. No holes or leaks were identified during the removal. Under the direction of an Alameda County Department of Environmental Health inspector, Weiss collected two soil samples from the excavation floor. The samples were analyzed for total petroleum hydrocarbons as gasoline (TPHg), total petroleum hydrocarbons as diesel (TPHD), benzene, toluene, ethylbenzene, and xylenes (BTEX), and oil and grease. No analytes were detected at concentrations above the laboratory reporting limits in either sample. The site's cumulative soil analytical data is included in Table 1. Details of the excavation sampling are included in Weiss' August 17, 1993 *Tank Excavation Sampling Report*. Weiss concluded that no hydrocarbons had been released from the waste oil tank and requested closure. An August 26, 1993 ACHCSA letter to Shell stated that no further site remediation was necessary at that time.

1998 Upgrade Site Inspection: On March 24, 1998, Cambria completed an inspection of the turbine sumps and tank pit areas at the site during a fuel-system upgrade that added secondary containment to the turbine sumps. No field indications of hydrocarbons, such as staining or odor, were observed during the site visit. Therefore, no sampling was performed at the site and no additional investigation of the turbine sump area was determined to be necessary. Cambria's April 9, 1998 *Upgrade Site Inspection Report* presents investigation details.

2004 Well Survey: In February 2004, at Shell's request, Cambria prepared a well receptor survey of the site vicinity. No potential receptor wells were identified within a ½-mile radius of the site (Figure 1).

2004 Upgrade Activities: Paradiso Mechanical, Inc. (Paradiso) of San Leandro, California upgraded fuel dispensers in late June through mid-July 2004. Paradiso upgraded under-dispenser containment at the dispensers and installed enhanced vapor-recovery equipment and improved sumps on the UST fuel fill ports. At City of Oakland Fire Services Agency's direction, Cambria

collected soil samples within 1 to 2 feet of native soil beneath each dispenser and at the 90-degree elbows of exposed product piping on July 22, 2004 (Figure 2). Laboratory analysis of the samples indicated the presence of hydrocarbons in soils in and around the dispenser locations. As a result, Shell filed an Underground Storage Tank Unauthorized Release Report Form with the City of Oakland Fire Department's Office of Emergency Services on July 29, 2004. Cambria's October 4, 2004 *Dispenser and Piping Upgrade Sampling Report* includes details of the upgrade sampling, and Table 1 presents the soil analytical data.

INVESTIGATION SUMMARY

Cambria oversaw the advancement of seven soil borings (SB-1 through SB-7) at the locations shown on Figure 2. After hand auguring to 5 feet for utility clearance, all borings were advanced using a direct-push drill rig and continuously logged for lithologic description. Soil samples were collected at 5-foot intervals beginning at 5 feet below grade (fbg). A soil sample was retained beneath first-encountered groundwater in boring SB-3 (SB-3-29.5) to confirm the lithology at this depth and to investigate possible hydrocarbon impact. Soil borings SB-1, SB-2, SB-4, and SB-5 were advanced to 25 fbg as proposed in the work plan. Soil borings SB-3 and SB-6 were advanced to 30 fbg to investigate lithology below first-encountered groundwater, and soil boring SB-7 was advanced to 24.5 fbg.

In each boring, temporary well casing was installed at the depth of first-encountered groundwater, and a grab groundwater sample was collected through polyethylene tubing. The collection of a second, discrete-depth groundwater sample was attempted in borings SB-4 through SB-7 using a hydropunch sampler. The hydropunch sampler is advanced from the surface to the desired sampling depth using hollow-push rods with the filter tip closed. Once the desired sample depth is reached, the push rods are retracted, exposing the encased filter screen. Samples are collected through polyethylene tubing.

Groundwater sample SB-6-W2 was collected from boring SB-6 at 25 to 27 fbg. No other depth-discrete groundwater samples were collected due to insufficient available water. In an effort to collect the additional samples, the hydropunch screen was exposed to a formation for at least 30 minutes at each attempted sampling point in borings SB-4, SB-5, and SB-7.

Cambria's standard field procedures for soil borings are included as Attachment A.

Personnel Present: Ron Barone, Cambria Staff Geologist.

C A M B R I A

Mr. Jerry Wickham
December 19, 2005

Permit: Alameda County Public Works Agency Water Resources Well Permit #W2005-0865 (Attachment B).

Drilling Company: Vironex, Inc. of San Leandro, California (C-57 License # 705927).

Drilling Dates: October 18 and 19, 2005.

Drilling Methods: Hand auger and direct push.

Number of Borings: Seven borings (SB-1 through SB-7). Table 2 provides boring data.

Boring Depths: Boring SB-7 was advanced to a depth of 24.5 fbg; borings SB-1, SB-2, SB-4, and SB-5 were advanced to a depth of 25 fbg; and borings SB-3 and SB-6 were advanced to depths of 30 fbg. Borings SB-3 and SB-6 were advanced past 25 fbg to assess lithologic conditions beneath first-encountered groundwater.

Groundwater Depths: Groundwater was observed in all borings at initial depths ranging from 4 to 20 fbg. Cambria believes that the shallow wet media at 4 fbg in boring SB-7 may be a result of the boring's proximity to the UST complex, and the migration of water from the pea gravel of the UST pit.

Soil Sampling Methods: Cambria logged soil types using the Unified Soil Classification System and described the encountered soils on the boring logs presented in Attachment C. Cambria collected soil samples continuously for soil description, possible chemical analyses, and headspace analysis. Cambria screened selected soil samples for the presence of organic vapors using a photo-ionization detector (PID) and recorded the PID readings on the boring logs.

Groundwater Sampling: Grab groundwater samples were collected from each boring at first-encountered groundwater through temporary well casing using polyethylene tubing. Groundwater samples from borings SB-4 and SB-5 were collected from 15 to 20 fbg, and samples from borings SB-1, SB-2, SB-3, SB-6, and SB-7 were collected from 20 to 25 fbg. Hydropunch borings were performed at locations SB-4 through SB-7 and depth-discrete groundwater sampling was attempted. SB-6-W2 was collected from boring SB-6 from 25 to 27 fbg. All other depth-discrete hydropunch attempts in borings SB-4, SB-5, and SB-7 contained insufficient water for sample collection.

Soil Classification: Soils encountered consisted of a 1.5- to 5-feet-thick silt underlain primarily by clays and sandy clays with lenses of sand and silt to the total explored depth of 30 fbg. A gravel interval extending from 25 to 27 fbg was encountered in soil boring SB-3. Boring logs are presented as Attachment C.

Backfill Method: All borings were backfilled with neat cement grout to match the existing grade.

Chemical Analyses: State-certified laboratory Severn Trent Laboratories of Pleasanton, California analyzed groundwater and selected soil samples from the borings for TPHg, BTEX, and fuel oxygenates by EPA Method 8260B.

Soil Disposal: Investigation activities generated approximately 0.73 tons of soil. Cambria temporarily stockpiled the soil on site and profiled it for disposal (laboratory report is included in Attachment D). Manley and Sons Trucking, Inc. of Sacramento, California transported the soil to Allied Waste Industries' Forward Landfill in Manteca, California for disposal as non-hazardous waste. The disposal confirmation is included as Attachment E.

INVESTIGATION RESULTS

Soil Analytical Results: TPHg was detected in six samples at concentrations up to 120 parts per million (ppm) in SB-6-5.0. The laboratory noted that this sample contained a quantity of unknown hydrocarbon(s) based on gasoline. Benzene was detected in two samples, SB-3-14.5 and SB-3-9.5, at concentrations of 0.0074 ppm and 0.013 ppm, respectively. Ethylbenzene was detected in four samples at concentrations up to 0.22 ppm (SB-3-9.5). Xylenes were detected in two samples, SB-3-9.5 and SB-3-5.0, at concentrations of 0.030 ppm and 0.21 ppm, respectively. Tert-butyl alcohol (TBA) was detected in 19 samples at concentrations up to 2.7 ppm (SB-4-19.5). MTBE was detected in 14 samples at concentrations up to 0.22 ppm (SB-3-9.5). No other petroleum hydrocarbons or fuel oxygenates were detected in soil during this investigation.

Table 1 contains the site's cumulative soil analytical data, and Figure 2 presents TPHg, benzene, and MTBE concentrations. The laboratory analytical reports are included in Attachment D.

Groundwater Analytical Results: TPHg was detected in first-encountered groundwater samples collected from soil borings SB-3, SB-5, SB-6, and SB-7 at concentrations ranging from 250 parts

per billion (ppb) to 3,800 ppb. Benzene was detected in first-encountered groundwater samples collected from soil borings SB-3 and SB-7 at concentrations of 3.0 ppb and 24 ppb, respectively. Toluene was detected in the first-encountered groundwater sample collected from soil boring SB-7 at a concentration of 140 ppb. Ethylbenzene was detected in first-encountered groundwater samples collected from soil borings SB-3 and SB-7 at concentrations of 22 ppb and 110 ppb, respectively. Xylenes were detected in first-encountered groundwater samples collected from soil borings SB-3 and SB-7 at concentrations of 18 ppb and 1,000 ppb, respectively. TBA was detected in first-encountered groundwater samples collected from soil borings SB-4 and SB-5 at concentrations of 270 ppb and 3,200 ppb, respectively. MTBE was detected in first-encountered groundwater samples collected in all soil borings at concentrations ranging from 1.6 ppb to 820 ppb.

The depth-discrete groundwater sample collected in soil boring SB-6 (SB-6-W2) contained detectable concentrations of TPHg (1,200 ppb), ethylbenzene (15 ppb), xylenes (29 ppb), and MTBE (1,400 ppb).

Table 3 summarizes groundwater analytical data, and Figure 2 presents TPHg, benzene, and MTBE concentrations. The laboratory analytical reports are included in Attachment D.

CONCLUSIONS AND RECOMMENDATIONS

Shell advanced seven soil borings on site to vertically profile the site's lithology and to determine the nature and extent of hydrocarbon impact to soil and groundwater. Low concentrations of petroleum hydrocarbons and fuel oxygenates were detected in soil samples collected during this investigation. All constituents detected were below San Francisco RWQCB environmental screening levels (ESLs) for sites at which groundwater is not a current or potential source of drinking water, with the exception of the 120-ppm detection of TPHg in soil sample SB-6-5.0. According to the *East Bay Plain Groundwater Basin Beneficial Use Evaluation Report*, (California Regional Water Quality Control Board – San Francisco Bay Region, June 1999), this site lies in a portion of the East Bay Plain with the potential for the use of shallow groundwater as a drinking water source. However, the document also states that the City of Oakland has no plans to “develop local groundwater resources for drinking water purposes because of existing or potential salt water intrusion, contamination, or poor or limited quantity.”

Petroleum hydrocarbons and fuel oxygenates (MTBE and TBA) were also detected in groundwater samples collected from the borings at depths ranging from 15 to 27 fbg. Only the TPHg detections from borings SB-3, SB-6, and SB-6 and the toluene and xylenes detections from

C A M B R I A

Mr. Jerry Wickham
December 19, 2005

boring SB-7 exceed the ESLs for groundwater which is not a current or potential source of drinking water.

Based on these results, Shell recommends that on-site groundwater monitoring wells be installed to provide a comprehensive groundwater monitoring network. If ACHCSA concurs with this recommendation, Cambria will submit a work plan under separate cover.

CLOSING

We appreciate your continued assistance with this project. Please call David Gibbs at (510) 420-3363 if you have any questions or comments regarding the contents of this report.

Sincerely,

Standard Field Procedures for Soil Borings

CAMBRIA

STANDARD FIELD PROCEDURES FOR GEOPROBE® SOIL AND GROUNDWATER SAMPLING

This document describes Cambria Environmental Technology's standard field methods for GeoProbe® soil and ground water sampling. These procedures are designed to comply with Federal, State and local regulatory guidelines. Specific field procedures are summarized below.

Objectives

Soil samples are collected to characterize subsurface lithology, assess whether the soils exhibit obvious hydrocarbon or other compound vapor odor or staining, estimate ground water depth and quality and to submit samples for chemical analysis.

Soil Classification/Logging

All soil samples are classified according to the Unified Soil Classification System by a trained geologist or engineer working under the supervision of a California Professional Geologist (PG) or a Certified Engineering Geologist (CEG). The following soil properties are noted for each soil sample:

- Principal and secondary grain size category (i.e., sand, silt, clay or gravel)
- Approximate percentage of each grain size category,
- Color,
- Approximate water or separate-phase hydrocarbon saturation percentage,
- Observed odor and/or discoloration,
- Other significant observations (i.e., cementation, presence of marker horizons, mineralogy), and
- Estimated permeability.

Soil Sampling

GeoProbe® soil samples are collected from borings driven using hydraulic push technologies. A minimum of one and one half ft of the soil column is collected for every five ft of drilled depth. Additional soil samples can be collected near the water table and at lithologic changes. Samples are collected using samplers lined with polyethylene or brass tubes driven into undisturbed sediments at the bottom of the borehole. The ground surface immediately adjacent to the boring is used as a datum to measure sample depth. The horizontal location of each boring is measured in the field relative to a permanent on-site reference using a measuring wheel or tape measure.

Drilling and sampling equipment is steam-cleaned or washed prior to drilling and between borings to prevent cross-contamination. Sampling equipment is washed between samples with trisodium phosphate or an equivalent EPA-approved detergent.

Sample Storage, Handling and Transport

Sampling tubes chosen for analysis are trimmed of excess soil and capped with Teflon® tape and plastic end caps. Soil samples are labeled and stored at or below 4°C on either crushed or dry ice, depending upon local regulations. Samples are transported under chain-of-custody to a State-certified analytic laboratory.

CAMBRIA

Field Screening

After a soil sample has been collected, soil from the remaining tubing is placed inside a sealed plastic bag and set aside to allow hydrocarbons to volatilize from the soil. After ten to fifteen minutes, a portable GasTech® or photoionization detector measures volatile hydrocarbon vapor concentrations in the bag's headspace, extracting the vapor through a slit in the plastic bag. The measurements are used along with the field observations, odors, stratigraphy and ground water depth to select soil samples for analysis.

Grab Ground Water Sampling

Ground water samples are collected from the open borehole using bailers, advancing disposable Tygon® tubing into the borehole and extracting ground water using a diaphragm pump, or using a hydro-punch style sampler with a bailer or tubing. The ground water samples are decanted into the appropriate containers supplied by the analytic laboratory. Samples are labeled, placed in protective foam sleeves, stored on crushed ice at or below 4° C, and transported under chain-of-custody to the laboratory.

Discrete Depth Soil and Ground Water Sampling

Soil and groundwater samples are collected for lithologic and chemical analysis using a direct driven, dual tube soil coring system. A hydraulic hammer drives sampling rods into the ground to collect continuous soil cores. Two nested sampling rods are driven at the same time: a larger diameter outer rod to act as a temporary drive casing and a smaller inner rod to retrieve soil cores. As the rods are advanced the soil is driven into a sample barrel that is attached to the end of the inner rod. The outer rod ensures that the sample is collected from the desired interval by preventing sloughing of the overlying material. After reaching the desired depth the inner rods are removed from the boring and the sleeves containing the soil sample are removed from the inner sample barrel. Sampling tubes chosen for analysis are trimmed of excess soil and capped with Teflon® tape and plastic end caps. Soil samples are labeled and stored at or below 4°C on either crushed or dry ice, depending upon local regulations. Samples are transported under chain-of-custody to a State-certified analytic laboratory.

When collecting groundwater samples, the sample barrel and inner rods are removed from the boring once the targeted water bearing zone has been reached. The drive casing is pulled up from 0.5 to 5 feet to allow groundwater to enter the borehole. Small diameter well casing and screen is then installed in the borehole to facilitate sample collection. The drive casing is then pulled up sufficiently to expose the desired length of screen and samples are collected using a bailer, peristaltic, bladder or inertial pump. The ground water samples are decanted into the appropriate containers supplied by the analytic laboratory. Samples are labeled, placed in protective foam sleeves, stored on crushed ice at or below 4° C, and transported under chain-of-custody to the laboratory.

Duplicates and Blanks

Blind duplicate water samples are usually collected only for monitoring well sampling programs, at a rate of one blind sample for every 10 wells sampled. Laboratory-supplied trip blanks accompany samples collected for all sampling programs to check for cross-contamination caused by sample handling and transport. These trip blanks are analyzed if the internal laboratory quality assurance/quality control (QA/QC) blanks contain the suspected field contaminants. An equipment blank may also be analyzed if non-dedicated sampling equipment is used.

CAMBRIA

Grouting

If the borings are not completed as wells, the borings are filled to the ground surface with cement grout poured or pumped through a tremie pipe.

Drilling Permit

Alameda County Public Works Agency - Water Resources Well Permit

399 Elmhurst Street
Hayward, CA 94544-1395
Telephone: (510)670-6633 Fax:(510)782-1939

Application Approved on: 09/02/2005 By jamesy
Permits Issued: W2005-0865

Receipt Number: WR2005-2093
Permits Valid from 10/19/2005 to 10/20/2005

Application Id: 1125679870731
Site Location: 510 E 14th St, Oakland, CA 94603
Project Start Date: 10/19/2005

City of Project Site:Oakland

Applicant: Cambria Environmental - Stewart Dalie IV
5900 Hollis St., Emeryville, CA 94608
Property Owner: Shell Oil Products Inc.
20945 Wilmington, Carson, CA 90801
Client: ** same as Property Owner **

Completion Date:10/20/2005

Phone: 510-420-3339
Phone: 707-865-0251

Total Due: \$200.00
Total Amount Paid: \$200.00
Paid By: CHECK PAID IN FULL

Works Requesting Permits:

Borehole(s) for Investigation-Contamination Study - 7 Boreholes

Driller: Vironex Inc - Lic #: 705927 - Method: other

Work Total: \$200.00

Specifications

Permit Number	Issued Dt	Expire Dt	#	Hole Diam	Max Depth
W2005-0865	09/02/2005	01/17/2006	7	3.00 in.	25.00 ft

Boreholes

Specific Work Permit Conditions

1. Backfill bore hole by tremie with cement grout or cement grout/sand mixture. Upper two-three feet replaced in kind or with compacted cuttings.
2. Boreholes shall not be left open for a period of more than 24 hours. All boreholes left open more than 24 hours will need approval from Alameda County Public Works Agency, Water Resources Section. All boreholes shall be backfilled according to permit destruction requirements and all concrete material and asphalt material shall be to Caltrans Spec or County/City Codes. No borehole(s) shall be left in a manner to act as a conduit at any time.
3. Applicant shall contact Johnson Tang for a inspection time at 510-670-6450 at least five (5) working days prior to starting, once the permit has been approved. Confirm the scheduled date(s) at least 24 hours prior to drilling.
4. Permit is valid only for the purpose specified herein. No changes in construction procedures, as described on this permit application. Boreholes shall not be converted to monitoring wells, without a permit application process.

ATTACHMENT C

Soil Boring Logs

Boring/Well Log Legend

KEY TO SYMBOLS/ABBREVIATIONS

- ☒ First encountered groundwater
- ☒ Static groundwater
- ☒ Soils logged by hand-auger or air-knife cuttings
- ☒ Soils logged by drill cuttings or disturbed sample
- ☒ Undisturbed soil sample interval
- ☒ Soil sample retained for submittal to analytical laboratory
- ☒ No recovery within interval
- ☒ Hydropunch screen interval

PID = Photo-ionization detector or organic vapor meter reading in parts per million (ppm)

fbg = Feet below grade

Blow Counts = Number of blows required to drive a California-modified split-spoon sampler using a 140-pound hammer falling freely 30 inches, recorded per 6-inch interval of a total 18-inch sample interval

(10YR 4/4) = Soil color according to Munsell Soil Color Charts

msl = Mean sea level

Soils logged according to the USCS.

UNIFIED SOILS CLASSIFICATION SYSTEM (USCS) SUMMARY

Major Divisions			Graphic	Group Symbol	Typical Description
Coarse-Grained Soils (>50% Sands and/or Gravels)	Gravel and Gravelly Soils	Clean Gravels (≤5% fines)		GW	Well-graded gravels, gravel-sand mixtures, little or no fines
		Gravels with Fines (≥15% fines)		GP	Poorly-graded gravels, gravel-sand mixtures, little or no fines
		Clean Sands (≤5% fines)		GM	Silty gravels, gravel-sand-silt mixtures
		Sands with Fines (≥15% fines)		GC	Clayey gravels, gravel-sand-clay mixtures
	Sand and Sandy Soils	Clean Sands (≤5% fines)		SW	Well-graded sands, gravelly sands, little or no fines
		Sands with Fines (≥15% fines)		SP	Poorly-graded sands, gravelly sand, little or no fines
		Sands with Fines (≥15% fines)		SM	Silty sands, sand-silt mixtures
		Sands with Fines (≥15% fines)		SC	Clayey sands, sand-clay mixtures
	Silts and Clays	Silts and Clays		ML	Inorganic silts, very fine sands, silty or clayey fine sands, clayey silts with slight plasticity
			CL	Inorganic clays of low to medium plasticity, gravelly clays, sandy clays, silty clays, lean clays	
			OL	Organic silts and organic silty clays of low plasticity	
		Silts and Clays		MH	Inorganic silts, micaceous or diatomaceous fine sand or silty soils
			CH	Inorganic clays of high plasticity	
		Silts and Clays		OH	Organic clays of medium to high plasticity, organic silts
			PT	Peat, humus, swamp soils with high organic contents	
Highly Organic Soils

BORING/WELL LOG

CLIENT NAME	Shell Oil Products Company	BORING/WELL NAME	SB-7
JOB/SITE NAME	Former Shell-Branded Service Station	DRILLING STARTED	19-Oct-05
LOCATION	510 E. 14th St (506 - 510 International Blvd.)	DRILLING COMPLETED	19-Oct-05
PROJECT NUMBER	247-0898-006	WELL DEVELOPMENT DATE (YIELD)	NA
DRILLER	Vironex	GROUND SURFACE ELEVATION	Not Surveyed
DRILLING METHOD	Direct Push	TOP OF CASING ELEVATION	Not Surveyed
BORING DIAMETER	3"	SCREENED INTERVALS	NA
LOGGED BY	Ron Barone	DEPTH TO WATER (First Encountered)	4.0 fbg (19-Oct-05) ▽
REVIEWED BY	Aubrey Cool, PG 7659	DEPTH TO WATER (Static)	NA ▽

Laboratory Analytical Reports

Cambria Environmental Emeryville

October 31, 2005

5900 Hollis Street, Ste. A
Emeryville, CA 94608

Attn.: David Gibbs

Project#: 247-0898-006
Project: 97601734
Site: 510 E. 14th Street, Oakland, CA

Attached is our report for your samples received on 10/20/2005 11:28

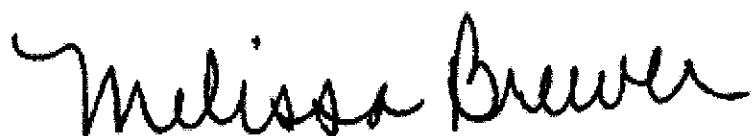

This report has been reviewed and approved for release. Reproduction of this report
is permitted only in its entirety.

Please note that any unused portion of the samples will be discarded after
12/04/2005 unless you have requested otherwise.

We appreciate the opportunity to be of service to you. If you have any questions,

You can also contact me via email. My email address is: mbrewer@stl-inc.com

Sincerely,

Melissa Brewer
Project Manager

Legend and Notes

Analysis Flag

L2

Reporting limits were raised due to high level of analyte present
in the sample.

N1

Internal standard out of range.

Result Flag

R1

Analyte RPD was out of QC limits.

Legend and Notes

Analysis Flag

L2

Reporting limits were raised due to high level of analyte present
in the sample.

N1

Internal standard out of range.

Result Flag

M5

MS/MSD spike recoveries were below acceptance limits.
See blank spike (LCS).

R1

Analyte RPD was out of QC limits.

Legend and Notes

Analysis Flag

L2

Reporting limits were raised due to high level of analyte present
in the sample.

Result Flag

Q1

Quantit. of unknown hydrocarbon(s) in sample based on gasoline.
