Thanks. It turns out we will use Summas for all sampled locations this event to provide the most reliable data.

Bob,
Thanks. For an interim measure, the reasoning for the use of the Tedlar bags appears appropriate and sound for the site. Critical sample locations, and final confirmation samples should utilize Summa canisters.

Mark,

Oops, I meant to say within the 6 hr DTSC recommendation for sample analysis from collection time.

Per below Tedlar bags can be used. We instruct lab to analyze within a few hours of receipt and well below 24 hr DTSC limit.

The DTSC April 2012 guidance approves the use of Tedlar bags for soil gas sampling, but says that they should be analyzed within 6 hours of sample collection (page 22 and Appendix B).

Bob,

I received your voice mail in regards to the use of Tedlar bags at the site. Your reasoning sounds sound; however, I don't have the time and don't recall if Tedlar bags are approved by DTSC. Can you verify and forward the page numbers?

Thanks,

Mark Detterman
