Subject: Tank Removal Activities, 3000 Busch Road, Pleasanton, California

Dear Mr. Appleton:

Please find enclosed our report on tank removal activities at 3000 Busch Road in Pleasanton. Two tanks were removed in May 2003 and no apparent releases had occurred from tank operations. We recommend that the enclosed report be submitted to the Livermore-Pleasanton Fire Department for consideration for site closure.

Please contact us if you have any questions or comments regarding this report.

Sincerely,

Yane Nordhav
Principal

REPORT ON TANK REMOVAL ACTIVITIES

**Hanson Aggregates Mid Pacific, Inc.
Pleasanton, California**

INTRODUCTION

This report documents the removal of one 12,000-gallon diesel and one 10,000-gallon gasoline underground storage tank (UST) from the Hanson Aggregates Mid Pacific, Inc. facility (site) at 3000 Busch Road in Pleasanton, California (Figure 1). BASELINE retained a tank removal contractor, Controlled Environmental Services (CES), to obtain the permits and remove the tanks and associated piping from the site. The location of the tanks, with respect to the site, is shown on Figure 2. Permits to remove both tanks were obtained from the Livermore-Pleasanton Fire Department. In addition, a Regulation 8 Rule 40 Notification form was submitted to the Bay Area Air Quality Management District. Copies of all permits and notifications are included in Appendix A. A copy of the Site Safety Plan, prepared for use at the site, is also included in Appendix A.

BACKGROUND

The USTs removed from the site were formerly used to fuel vehicles and equipment. The 12,000-gallon tank had stored diesel fuel and the 10,000-gallon tank had stored gasoline. The tanks consisted of double-walled steel with a fiberglass coating, and were approximately 13 years old. The tank pit was covered by a steel-reinforced concrete pad. A fuel island and two fuel dispensers were located on a concrete pad directly over the tanks. Product lines connecting the dispensers to fuel pumps and the tanks did not extend beyond the tank pit. Specific features, including the location of piping, are shown on Figure 3.

FIELD ACTIVITIES

On 19 May 2003, CES began preparing the site. The fuel dispensers were separated from the tanks, and residual fuel in the tanks was pumped out. Clearwater Environmental Management (Clearwater) was contracted to pump out any remaining product in the tanks, and removed approximately 150 gallons of gasoline and 1,400 gallons of diesel fuel. Following removal of the product, the product lines and the interior of the tanks were pressure-washed. Clearwater removed approximately 900 gallons of rinse water generated while cleaning the product lines and tanks. A total of 2,450 gallons of fuel-water mixture was transported as non-RCRA hazardous waste liquid for disposal at Alviso Independent Oil in Alviso, California. A copy of the hazardous waste manifest for this liquid is included in Appendix B.

On 20 May 2003, CES completed demolition of the concrete pad, removed the dispensers, and exposed the tanks and pea gravel that filled the tank pit (Figure 4).

Samples of the pea gravel from beneath each of the diesel and gasoline dispensers were collected from a depth of about 1.0 to 1.5 feet below the base of the fuel island using a hand-percussion sampling device containing a stainless-steel tube (sample numbers Dg-1;1.0-1.5 and Dd-1;1.0-1.5, respectively). The sampling tubes were sealed with Teflon film, plastic caps, and silicone tape; labeled; placed in plastic bags; and stored in a cooled container. The samples were subsequently transported under chain-of-custody procedures to Severn Trent Laboratories, Inc (STL), a California-certified analytical laboratory in Pleasanton, for analysis.

Following collection of samples from beneath the dispensers, CES removed pea gravel from the tank pit to expose each tank and to remove the product lines, pumps, and associated piping. Pea gravel was also removed from the sides of each tank and some native sand was removed in the process. The excavated pea gravel and native soil were temporarily stockpiled on plastic sheeting adjacent to the tank pit. The pea gravel and limited native sand were stockpiled in stockpiles 3 and 4 (Figure 3).

Two sections of slotted PVC casing that had been used as tank pit monitoring wells were removed, as were the stingers inside the tanks, and a high-capacity fuel pump for the diesel tank. Following removal of all piping, dry ice was placed inside each tank. Some openings in the tanks were then sealed to assist with venting the petroleum vapors.

On 21 May 2003, CES added additional dry ice to each tank prior to removal. A total of 500 pounds of dry ice was placed in the gasoline tank, and a total of 300 pounds of dry ice was placed in the diesel tank. Oxygen and liquid explosive limit (LEL) readings were collected from each tank prior to lifting them from the tank pit. The oxygen and LEL readings from the gasoline tank were 2.4 ppm and 12 percent, respectively. The oxygen and LEL readings from the diesel tank were 8.7 ppm and 3 percent, respectively. With the approval of Mr. Rigter, Hazardous Materials Inspector for the Livermore-Pleasanton Fire Department, each tank was removed using a crane (Figure 4). After removal, each tank was brushed to expose the exterior surface and inspected (Figure 5). Both tanks were in good condition and no holes or staining were observed. The tanks were loaded onto a truck and transported as a hazardous waste to Ecology Control Industries in Richmond. A copy of the hazardous waste manifest for each tank is included in Appendix B.

After the tanks had been removed, additional pea gravel was removed to uncover the bottom of the tank pit and enable an inspection of the native soil for any evidence that a release of petroleum product had occurred. This material was placed in stockpile 2. No evidence of staining or other signs of a petroleum release were observed in the soils beneath the tank pit or in the side walls.

While removing pea gravel from around the diesel tank, a faint petroleum odor was noticed. The source of the odoriferous pea gravel/sand may have been from small volume(s) of fuel released during the disconnection of dispensers or fuel lines from the tanks. Approximately seven cubic yards of odoriferous material were placed in a separate stockpile (stockpile 1 on Figure 3) to segregate it for subsequent sampling. The total volume of material that was removed from the tank pit and placed in stockpiles was estimated to be between 100 and 120 cubic yards.

At the direction of Mr. Rigter, samples of native soil were collected at three locations from beneath each tank (SD-1 through SD-3 and SG-1 through SG-3) (Figure 3). The samples were collected from a depth of about 16.5 feet; no water was encountered. The soil samples were collected from the bucket on the tank excavator using a hand-percussion sampling device to drive a stainless steel tube into the soil. Immediately after collection, each sampling tube was sealed with Teflon film, plastic caps, and silicone tape; labeled; placed in plastic bags; and stored in a cooled container. These samples were subsequently transported under chain-of-custody procedures to STL for analysis on a 24-hour turn-around basis.

Three large stockpiles and one small stockpile were generated during removal of the tanks. These stockpiles were composed primarily of pea gravel but contained some sand from excavation along the side walls and bottom of the tank pit. One sample from each stockpile was collected in the manner described above, and transported to STL for analysis on a 24-hour turn-around basis. The sampling locations were chosen by dividing each stockpile into six sections and randomly choosing one of the six locations for sampling.

On 27 May, following receipt of analytical results for the tank pit and stockpile samples, the excavated pea gravel and native soil from stockpiles 2, 3, and 4 were placed back into the tank pit. Additional clean gravel from a commercial sand and gravel yard was used to restore the surface of the tank pit to grade, and the surface was compacted. On 17 June, following receipt of analytical results, the small stockpile (stockpile 1) was moved to a vacant unpaved area of the site and spread out onto the surface.

HYDROGEOLOGY

Subsurface soil beneath the site was exposed in the side walls of the excavation. A gravel fill material was observed to extend from the surface to approximately three feet below ground surface (bgs). Native soil consisting of sand was observed extending from below the gravel fill to approximately 17 feet bgs, which was the total depth of the excavation (Figure 5).

Groundwater was not encountered in the tank pit excavation. The Zone 7 Water Agency, which manages groundwater resources in the Livermore Valley, was contacted regarding depth to groundwater in the site vicinity. Mr. Wyman Hong at Zone 7 reported that the nearest monitoring well (well ID 3S1E15A4) is located approximately one-half mile west of the site. On 14 May 2003, the depth to groundwater in this well was measured to be 95 feet bgs.

ANALYTICAL RESULTS

The analytical results from soil samples collected during tank removal activities are described below and summarized in Table 1. Copies of the laboratory report and chain-of-custody documentation are included in Appendix C.

Samples SG-1, SG-2, and SG-3 were collected from native soil beneath the gasoline tank and analyzed for total petroleum hydrocarbons as gasoline (TPHg); total petroleum hydrocarbons as diesel, with silica gel clean-up (TPHd); volatile organic compounds (VOCs), including methyl

tertiary butyl ether (MTBE), benzene, toluene, ethylbenzene, and total xylene isomers (BTEX); and total lead. These compounds were not detected at or above the laboratory's reporting limit for the analytical methods used.

Samples SD-1, SD-2, and SD-3 were collected from beneath the diesel tank and analyzed for TPHg, TPHd, and total lead. None of these analytes was detected at or above the laboratory's reporting limit for the analytical methods used.

Four individual soil samples were collected from the three large stockpiles (stockpiles 2, 3, and 4), composited into a single sample (SP-1), and analyzed for TPHg and TPHd. These compounds were not detected at or above the laboratory's reporting limit for the analytical methods used.

The soil sample from stockpile 1 (EX-1) was collected from the small stockpile that had been segregated when a petroleum odor was detected in the pea gravel near the high-capacity diesel fuel pump. This sample was analyzed for TPHg and TPHd. TPHg was not detected at or above the laboratory's reporting limit for the analytical method used. TPHd was detected at a concentration of 10 milligrams per kilogram (mg/kg).

Sample Dg-1 was collected from beneath the gasoline dispenser and analyzed for TPHg, TPHd, MTBE, BTEX, and VOCs. These compounds were not detected at or above the laboratory's reporting limit for the analytical methods used.

Sample Dd-1 was collected from beneath the diesel dispenser and analyzed for TPHg and TPHd. TPHg was not detected at or above the laboratory's reporting limit for the analytical method used. TPHd was detected at a concentration of 210 mg/kg.

DISCUSSION

Visual inspection of the tanks indicated they were structurally sound and that a product release from a rupture or other leak had not occurred. Analysis of soil samples collected from native soil below each tank, and from the stockpiled material removed from the tank pit, also indicated that a product release had not occurred. Petroleum hydrocarbons as diesel were detected in two samples (EX-1 and Dd-1), both of which were likely associated with minor releases of fuel that occurred while disconnecting piping lines.

CONCLUSIONS

Visual inspection of the tanks and the tank pit, and laboratory analysis of soil samples from the native sand underlying the tanks, indicate the two fuel tanks at the site were structurally competent and that a release of fuel did not occur during the operation of the tanks. Minor concentrations of TPHd were detected in samples EX-1 and Dd-1. Sample EX-1 was collected from a stockpile of about five cubic yards. The soil/gravel in that stockpile was placed at the ground surface in the yard. Sample Dd-1 was collected from beneath the diesel dispenser. The material was placed in stockpile 3; a random sample from that stockpile was composited with three randomly collected samples from

stockpiles 2 and 4. The composite sample did not contain any compounds above the laboratory reporting limits.

RECOMMENDATIONS

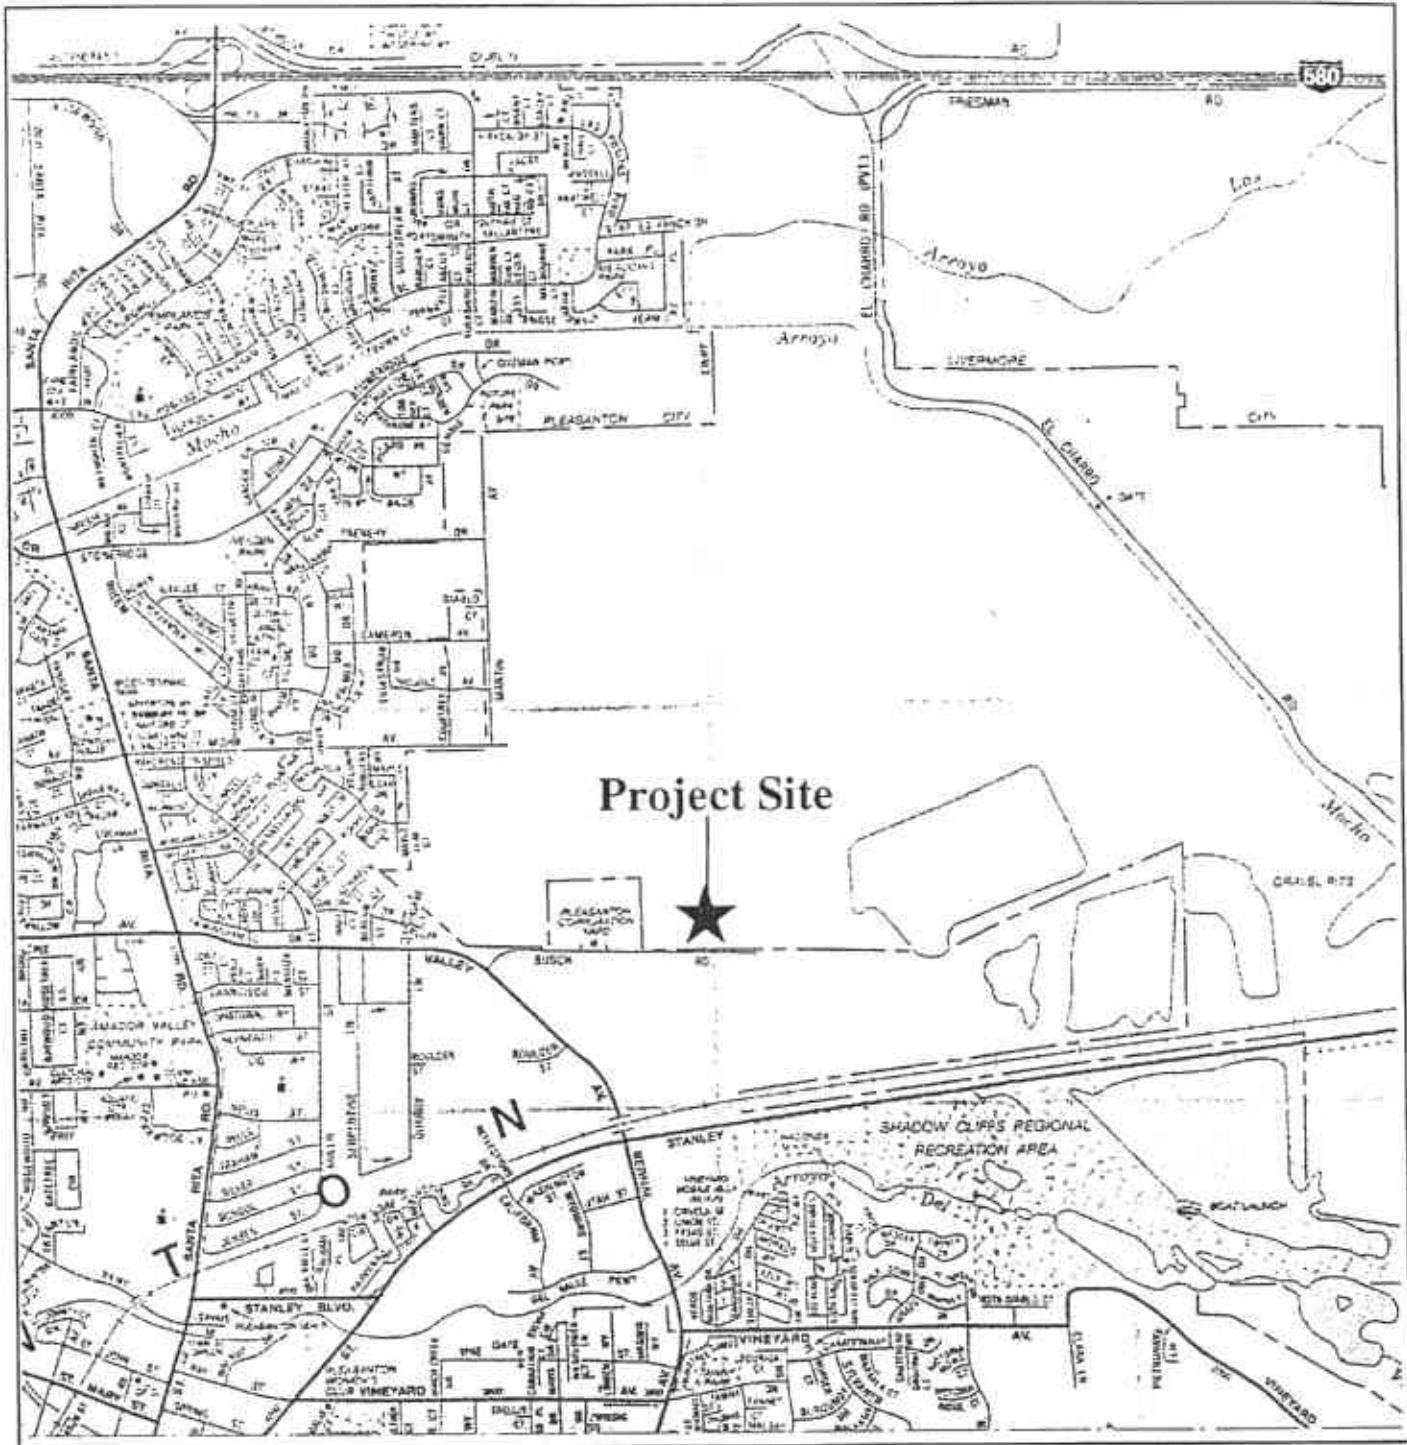

Based on the data collected during the tank removal activities, it is recommended that this site be considered for site closure by the Livermore-Pleasanton Fire Department.

LIMITATIONS

The conclusions presented in this report are professional opinions based on the indicated data described in this report. They are intended only for the purpose, site, and project indicated. Opinions and recommendations presented herein apply to site conditions existing at the time of our study. Changes in the conditions of the subject property can occur with time, because of natural processes or the works of man, on the subject site or adjacent properties. Changes in applicable standards can also occur as the result of legislation or from the broadening of knowledge. Accordingly, the findings of this report may be invalidated, wholly or in part, by changes beyond our control

8. Have tanks or pipes leaked in the past?

- Yes. Describe: _____
 No
 Unknown

Management of Tanks

Before tanks are pumped out and inerted, all associated piping must be flushed out into the tanks. All accessible associated piping must then be removed. Piping must be disposed of as hazardous waste unless approved alternative method used. Inaccessible piping must be permanently plugged. It is the contractor's responsibility to bring a working combustible gas indicator on site to verify that the tank is inert. Tanks cannot be removed from the ground unless the LEL is < 20% and the O₂ is <10%. The meter must be calibrated in the fire inspector's presence.

A.

Tanks to be managed as NON Hazardous Waste:

A supplemental plan must be attached to this plan demonstrating how the requirements of California Code of Regulations Title 22, Chapter 32 Management of Tanks, Sections 67383.1 – 67383.5 will be satisfied.

B.

Tanks to be managed as Hazardous Waste:

Dry ice must be placed in the tank in an amount not less than 22.2 pounds per 1000 gallons of tank capacity. Other methods must be approved on a case by case basis by the Fire Department.

* 9. Methods to be used for rendering tank(s) inert:

- Cleaning (See attached supplemental information)
 Dry ice (22.2 pounds per 1000 gallons tank volume)
 Other _____

Sample Collection and Analysis

10. Sample Analysis

	TPHG	TPH D	BTX&E	Lead	CL Hydro	O&G	EPA 8270	pH	MTBE	Other (specify)
Tank 1		X				X				
Tank 2	X		X	X						8260
Tank 3										
Tank 4										
Tank 5										

One soil sample must be collected for every 20 linear feet of piping that is removed. An underground water sample must be collected if any ground water is present in the excavation. Two soil samples must be collected at each end of the underground tank in native soil (one sample for tanks less than 1,000 gallons).

Stockpiled soil must be placed on bermed plastic and must be completely covered by plastic sheeting if odors are present.

SITE HEALTH AND SAFETY PLAN

PROJECT/CLIENT INFORMATION			
Project No: Y3515-00	Project Manager: Bill Howell	Site Health and Safety Manager: William Scott	Field Activities Date: May 2003
Client: Hanson Aggregates Pleasanton Yard 3000 Busch Road Pleasanton, CA 94566	Phone: (925) 426-4051		Site Address: 300 Busch Road Pleasanton, CA 94566

PROJECT DESCRIPTION: The project consists of the removal of two USTs from the Hanson Aggregate's Pleasanton facility. A licensed contractor, Controlled Environmental Services, under the direction of BASELINE's field geologist, will clean and remove a 10,000-gallon gasoline tank and a 12,000-gallon diesel tank. All associate product lines, piping, and fuel dispensers will be removed. At a minimum, three soil samples will and several stock pile samples be collected from the bottom of each UST excavation. Each excavation will be backfilled with excavated material and/or new material.

BACKGROUND AND SITE HISTORY: The site is active aggregate quarries, a processing plant, and business offices. Two USTs were installed approximately 10 years ago for fueling of trucks and heavy equipment. The tanks are steel double-walled and coated with fiberglass.

CHEMICAL HAZARDS

The following suspected chemical hazards identified below may potentially be encountered by site personnel during sampling or other on-site activities disturbing subsurface soil and/or groundwater. Material Safety Data Sheets for chemical hazards are maintained at BASELINE's Emeryville and Petaluma offices, and are available for review, upon request.

Chemical	Description	Health and Safety Standards/Odor Threshold (OT)	Persons Exposed** and Potential Exposure Routes	Symptoms of Acute Exposure
Diesel	Combustible liquid	No TLV	Dermal	Minor eye/skin irritation
Benzene	Carcinogen, aromatic HC	8-hr TLV=10 ppm PEL=1 ppm	Inhalation, dermal	Headache, dizziness, minor skin irritation
Toluene	Aromatic HC	8-hr TLV=100 ppm	Inhalation, dermal	Headache, dizziness, minor skin irritation
Xylenes	Aromatic HC	8-hr TLV=100 ppm	Inhalation, dermal	Headache, dizziness, minor skin irritation
Ethylbenzene	Aromatic HC	8-hr TLV=100 ppm	Inhalation, dermal	Headache, dizziness, minor skin irritation
Gasoline	Hydrocarbon, carcinogen (engine exhaust), flammable LEL = 1.4% UEL = 7.6%	PEL = 300 ppm REL/TLV = 300 ppm STEL = 500 ppm IDLH = -- OT = 0.3 ppm	Inhalation, dermal, eyes, ingestion	Eye and skin irritation, headache, fatigue, dermatitis, blurred vision, dizziness, slurred speech, confusion, convulsions

Notes:

* Contractor and samplers.

Note: Health and safety standards refer to airborne concentrations to which nearly all workers may be repeatedly exposed daily without harmful effects. The concentrations are time-weighted averages for a normal 8-hour work period.

PHYSICAL HAZARDS

Fire and explosion, heavy equipment, heat stress, noise. Drill rig safety requirements are the responsibility of the operator. BASELINE employees will follow standard operating procedures for sampling and quality assurance control. A copy of this site-specific health and safety plan will be provided at the site, and will be reviewed by the Site Health and Safety Manager or designated personnel prior to the start of work at the site. Drilling contractor shall be responsible for complying with all OSHA requirements and accepted industry practices for protection of employee health and safety. The drilling contractor shall ensure that all equipment is in good working order prior to starting work. The drilling contractor shall ensure that proper housekeeping is maintained around the work area at all times. All on-site workers, including subcontractors, must be 40-hour trained in accordance with the OSHA Hazwoper standard, and must be medically surveilled in accordance with the requirements of the company's health and safety plan. All visitors to the site must be 40-hour trained. The health and safety officer will inquire whether each visitor is trained.

BASELINE employees shall observe the following precautions:

- 1) Watch for slippery ground.
- 2) All unattended boreholes must be adequately covered.
- 3) Maximize distance from the rig and do not take readings at rig during auger clearing or drive sampling.
- 4) Wear safety hard hats and safety footwear.
- 5) Prevent strain injuries by using small sample shipping containers and/or material handling aids. Use portable table for opening split spoon samplers, and
- 6) Avoid heat/cold stress by taking regular work breaks, liquids intake, and appropriate attire, as needed.

PERSONAL PROTECTIVE EQUIPMENT REQUIRED: Hard hats, respirators equipped with high efficiency filters and/or organic vapor cartridges (use to be designated by Health and Safety Officer), nitrile gloves, safety goggles, rubber boots, water supply for washing, decontamination, and for drinking, disposable overalls (non-coated), first-aid kit, noise protection (ear plugs).

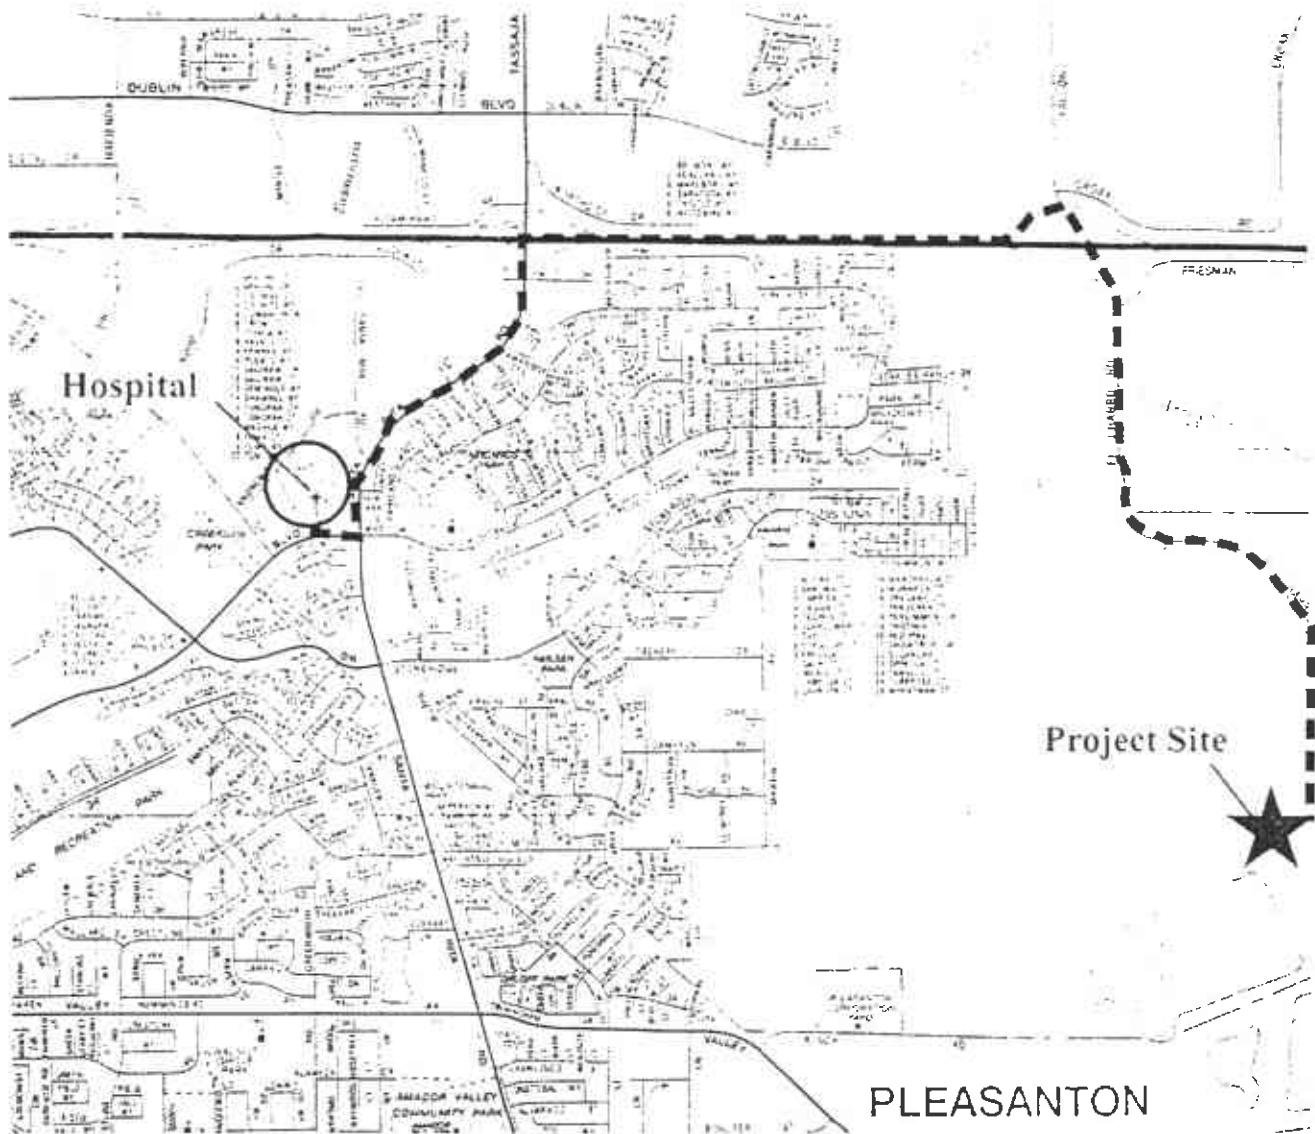

AIR MONITORING STRATEGY (INCLUDING ACTION LEVELS): Before field work begins, collect background readings using PID and combustible gas indicator. Monitor excavation using the combustible gas indicator. If >20% LEL, stop work to air out excavation until <20% LEL. May use PID and/or methane detector tubes to characterize vapors. NoIDLH conditions are anticipated at the site.

SITE CONTROL MEASURES: Define and demarcate exclusion and clean zones for each boring location. No eating and drinking permitted in exclusion zone. Avoid skin and eye contact with soil to maximum extent possible. If dusty conditions, don safety goggles and respirators equipped with filters. USA will provide utility clearance. Hand-digging may be performed where utilities are suspected (even though not identified through USA). Personal hygiene imperative to prevent prolonged skin contact with site soils and dusts. In the event of a minor release of a hazardous material, the spill will be immediately cleaned up by site personnel, and spill cleanup materials placed in drums for off-site disposal. In the event of a major spill of hazardous material, follow the emergency procedures below. Place cuttings in drums, secure on-site and label. Dispose of decontamination equipment and personal protective gear in BASELINE-provided containers. No contact lenses.

DECONTAMINATION PROCEDURES (PERSONAL AND EQUIPMENT): Decontaminate boots and soil sampling equipment on-site using TSP and rinse twice with water. Remove and dispose of gloves and overalls in appropriate manner.

UNDERGROUND TANK CLOSURE CHECKLIST

Name:	<u>Hector A. Gómez</u>	Date:	<u>12/10/03 8:20 AM</u>
Address:	<u>1000 FINCH BLVD., DUBLIN</u>	# Tanks being removed:	<u>2</u>
Size:	<u>10' DIAMETER DIESEL</u>	Contents:	<u>CULICENE</u>
Size:	<u>12' DIAMETER DIESEL</u>	Contents:	<u>DIESEL</u>
Size:	<u>—</u>	Contents:	<u>—</u>
Size:	<u>—</u>	Contents:	<u>—</u>

Closure permit has been obtained and is on site? Yes No

Changes from approved closure plan? MIRE 12' GND 10' DIAMETER TANKS

ABC fire extinguisher on site? TANKS ARE 12' DIAMETER TANKS AND DO NOT NEED (NOT NEEDED)

Actual material removed from tank? Yes No

Have residuals been properly contained for off-site transport? LEAKED FROM TANKS - 12/10/03

Received receipt for dry ice? Yes No

Number of pounds of dry ice in each tank?	#1	#2	#3	#4	ADDED ADDITIONAL DIESEL JUST PRIOR TO SHIPPING
	200	300	—	—	

Detector has calibrated combustible gas detector in presence of inspector? Yes No

Notes: MICROBEAMS DEMCO (THERM ENVIRONMENTAL)

Combustible gas readings/oxygen readings:

Estimated Contents (approx.)	% LEL (top)	% LEL (mid)	% LEL (bottom)	% O ₂ (top)	% O ₂ (mid)	% O ₂ (bottom)	OK to remove?
22490000	12	12	12	2.0	2.2	2.4	✓
22490404	3	3	3	9.4	9	8.7	✓
—	—	—	—	—	—	—	—
—	—	—	—	—	—	—	—

Do not be pulled if concentration of flammable vapors exceeds 20% of the LEL of the material in the tank or the concentration exceeds 5%. PER LPFD USE Removal GUIDELINES

If tank is removed, observe conditions of tank(s) and piping:

	Tank 1	Tank 2	Tank 3	Tank 4
Corrosion or holes?	N/O	N/O	—	—
Is tank wrapped?	Yes	Yes	—	—
Are hydrocarbon vapors? <u>NO : JUST PEST BAIT</u>	N/O	N/O	—	—
Coloration of the soil in the tank pit or along piping trench?	N/O	N/O	—	—

Description of backfill: PEA Gravel - SOIL WAS SODA (2-3 FEET
POLLUTION)

Observations: Small Amount of Oil (Diesel) observed during

PEA Gravel Removal (Below Diesel Tank) removed
A small (1/2") amount of material - stocked
Separately (3-5 lbs?)

8. Was there evidence of contamination which would trigger the 24-hour release reporting requirements? If yes, was a blank copy provided to site operator? Yes No

10. Has obvious contamination been removed? Yes No *NOT OBSERVED*
Has obvious contamination been left in place? Yes No

Describe details of approximately how much and where it will be disposed of? SEE #8 ON PAGE 1

1. Is water observed in tank pit? Yes No If yes, a sample of the water must be taken.
Sample collected? Yes No

2. Soil samples must be collected in the tank pit under each end of the tank, a minimum of two feet into native soil according to the closure plan.

Soil samples were collected according to the closure plan.

Yes No

Soil samples must also be collected under piping at 20 ft. intervals.

Yes No

Samples of the stockpile must be taken to determine disposal options.

Yes No

3. The samples were properly taken?

Yes No

The samples were properly sealed and labeled.

Yes No

The chain of custody form was observed to be properly completed?

Yes No

The samples were placed in an iced chest?

Yes No

4. Name of analytical laboratory STL RECYCLING OFFICE (Formerly CHNORLAB)

5. The tank pit must be filled with soil or properly barricaded to prevent unauthorized access.

Was the tank pit filled with: new soil excavated backfill - OR -

Was the tank pit left open pending analytical results? Yes No

Was the tank pit covered/barricaded? Yes No

15. Tanks loaded onto hauler vehicle have identifying numbers spray painted on them? Yes

No (SEE #7 ON PAGE 1)

16. Hauler provides documentation of current certification as a hazardous waste hauler. Yes No

17. Manifest observed to be properly completed (name and address, EPA ID, hauler name, disposal site, signed and dated).

Name of disposal site ECI RICHMOND CA

8. Were all containers, residual tanks and associated piping transported off site and manifested? Yes No

Diagram of tank pit, sample locations and ID

*SEE ATTACHED DRAWING PROVIDED BY BASELINE ENVIRON.
(BILL SCOTT)*

TIMING

ON SITE @ 0830	- Contractor's crane on site; set up (Contractor Env Services, Baseline Env; Maxon Crane)
09:45	- ECI Arrived (Transport)
11:45	- TANKS UNDER TRANSPORT
13:30	- END OF DAY (CONT'D)

9. Certification and proper tanks cleaning observed? Yes No N/A

Signed _____ Date _____ Number of hours to complete: 4.5 hrs

Signature of Business Responsible: John H. and K.S. Miller / JHM 5-21-03

Inspector: John Ritter

N/O = NOT OBSERVED

APPENDIX C

**LABORATORY REPORTS AND
CHAIN-OF-CUSTODY DOCUMENTATION**

Baseline Environmental

May 23, 2003

Quality Control Checklist
for Review of Laboratory Report

Job No.: Y3515-00
 Laboratory: STL
 Report Date: 5/23/03

Site: Hansen Aggregate - Pleasants
 Laboratory Report No: 2003-05-05 82
 BASELINE Review By: BH

		Yes	No	NA
GENERAL QUESTIONS				
(Describe "no" responses below in "comments" section. Contact the laboratory, as required, for further explanation or action on "no" responses; document discussion in comments section.)				
1a.	Does the report include a case narrative? (A case narrative <i>MUST</i> be prepared by the lab for all analytical work requested by BASELINE)	X		
1b.	Is the number of pages for the lab report as indicated on the case narrative/lab transmittal consistent with the number of pages that are included in report?		X	
1c.	Does the case narrative indicate which samples were analyzed by a subcontractor and the subcontractor's name?			X
1d.	Does the case narrative summarize subsequent requests not shown on the chain-of-custody (e.g., additional analyses requested, release of "hold" samples)?			X
1e.	Does the case narrative explain why requested analyses could not be performed by laboratory (e.g., insufficient sample)?			X
1f.	Does the case narrative explain all problems with the QA/QC data as identified in the checklist (as applicable) ?			X
2a.	Is the laboratory report format consistent and legible throughout the report?	X		
2b.	Are the sample and reported dates shown in the laboratory report correct?	X		
3a.	Does the lab report include the original chain-of-custody form?	X		
3b.	Were all samples appropriately analyzed as requested on the chain-of-custody form?	X		
4.	Was the lab report signed and dated as being reviewed by the laboratory director, QA manager, or other appropriate personnel? (Some lab reports have signature spaces for each page). (This requirement also applies to any analyses subcontracted out by the laboratory)		X	
5a.	Are preparation methods, cleanup methods (if applicable), and laboratory methods indicated for all analyses?	X		
5b.	If additional analytes were requested as part of the reporting of the data for an analytical method, were these included in the lab report?			X
6.	Are the units in the lab report provided for each analysis consistent throughout the report?	X		
7.	Are the detection limits (DL) appropriate based on the intended use of the data? (e.g., DL below applicable MCLs for water quality issues?)	X		
8a.	Are detection limits appropriate based on the analysis performed? (i.e., not elevated due to dilution effects)	X		
8b.	If no, is an explanation provided by the laboratory?			X

Laboratory Quality Control Checklist

Page 2

	Yes	No	NA
9a. Were the samples analyzed within the appropriate holding time? (generally 2 weeks for volatiles, and up to 6 months for total metals)	X		XX
9b. If no, was it flagged in the report?			X
10. If samples were composited prior to analysis, does the lab report indicate which samples were composited for each analysis?	X		#
11a. Do the chromatograms confirm quantitative laboratory results? (petroleum hydrocarbons)	X		
11b. Is a standard chromatogram(s) included in the laboratory report?	X		
11c. Do the chromatograms confirm laboratory notes, if present (e.g., sample exhibits lighter hydrocarbon than standard)			X
12. Are the results consistent with previous analytical results from the site? (If no, contact the lab and request review/reanalysis of data, as appropriate)			X
13a. REVISED LAB REPORTS ONLY. Is the revised lab report or revised pages to a lab report signed and dated as being reviewed by the laboratory director, QA manager, or other appropriate personnel?			X
13b. REVISED LAB REPORTS ONLY. Does the case narrative indicate the date of revision and provide an explanation for the revision?			X
13c. REVISED LAB REPORTS ONLY. Does the revised lab report adequately address the problem(s) which triggered the need for a revision?			X
13d. REVISED LAB REPORTS ONLY. Are the data included in the revised report the same as data reported in the original report, except where the report was revised to correct incorrectly reported data?			X

QA/QC Questions

Field Laboratory Quality Control - Groundwater Analyses

14. Are field blanks reported as "ND"? (groundwater samples) <i>A field blank is a sample of DI water which is prepared in the field using the same collection and handling procedures as the other samples collected, and used to demonstrate that the sampling procedure has not contaminated the sample.</i>			X
15. Are trip blanks reported as "ND"? (groundwater samples/volatile analyses) <i>A trip blank is a sample of contaminant-free matrix placed in an appropriate container by the lab and transported with the field samples collected. Provides information regarding positive interference introduced during sample transport, storage, preservation, and analysis. The sample is NOT opened in the field.</i>			X
16. Are duplicate sample results consistent with the original sample? (groundwater samples) <i>Field duplicates consist of two independent samples collected at the same sampling location during a single sampling event. Used to evaluate precision of the analytical data and sampling technique. (Differences between the duplicate and sample results may also be attributed to environmental variability).</i>			X

Laboratory Quality Control Checklist

Page 3

	Yes	No	NA
--	-----	----	----

Batch Quality Control

Samples are batched together by matrix [soil, water] and analyses requested. A batch generally consists of 20 or fewer samples of the same matrix type, and is prepared using the same reagents, standards, procedures, and time frame as the samples. QC samples are run with each batch to assess performance of the entire measurement process.)

7. Do the sample batch numbers and corresponding laboratory QA/QC batch numbers match?	X		
18a. Are method blanks (MB) for the analytical method(s) below the laboratory reporting limits? <i>Used to assess lab contamination and prevent false positive results. MBs should be "ND."</i>	X		
18b. If no, is an explanation provided in the case narrative to validate the data?			X
18c. Are analytes which may be considered laboratory contaminants reported below the laboratory reporting limit? <i>Common lab contaminants include acetone, methylene chloride, diethylhexyl phthalate, and di-n-octyl phthalate.</i>			X
18d. If no, was the laboratory contacted to determine whether reported analyte could be a potential laboratory contaminant and was an explanation included in the case narrative?			X
19. Are laboratory control samples (LCS) and LCS duplicate (LCSD) [a.k.a., Blank Spike (BS) and BS duplicates (BSD)] within laboratory reporting limits? Limits should be provided on the report. <i>LCS is a reagent blank spike with a representative selection of target analyte(s) and prepared in the same manner as the samples analyzed. The LCS should be spiked with the same analytes as the matrix spike (below). The LCS is free from interferences from the sample matrix and demonstrates the ability of the lab instruments to recover the target analytes. Accuracy (recovery information) is generally reported as % spike recovery; precision (reproducibility of results) between the LCS and LCSD is generally reported as the relative percent difference (RPD). LCS/LCSD can be run in addition to or in lieu of, matrix QC data.</i>	X		
20a. Are the Matrix QC data (i.e., MS/MSD) within laboratory limits? Limits should be provided on the lab report. <i>The lab selects a sample from the batch and analyzes a spike and a spike duplicate of that sample. Matrix QC data is used to obtain precision and accuracy information and is reported in the same manner as LCS/LCSD. If the MS/MSD fails, the results may still be considered valid if the MB and either the LCS/LCSD or BS/BSD is within the lab's limits (failure is probably due to matrix interference).</i>			X
20b. If no, is the MB and either LCS/LCSD or BS/BSD within lab limits to validate the data?			X

Laboratory Quality Control Checklist

Page 4

	Yes	No	NA
Sample Quality Control			
21a. Are the surrogate spikes reported within the lab's acceptable recovery limits? A surrogate is a non-target analyte, which is similar in chemical structure to the analyte(s) being analyzed for, and which is not commonly found in environmental samples. A known concentration of the surrogate is spike into the sample or QA "sample" prior to extraction or sample preparation. Results are usually reported as % recovery of the spike. Failure to meet lab's limits for primary and secondary surrogates results in rebatching and reanalysis of the sample; failure of only the primary or the secondary surrogate may be acceptable under certain circumstances. Failure generally is due to coelution with the sample matrix.			X
21b. If no, is an explanation given in the case narrative to validate the data?			X

Sample Receipt Checklist

Submission #: 2003- 05 - 0582

Checklist completed by: (initials) NK Date: 05/21/03

Courier name: STL San Francisco Client _____

Custody seals intact on shipping container/samples

Yes _____ No _____ Not Present

Chain of custody present?

Yes No _____

Chain of custody signed when relinquished and received?

Yes No _____

Chain of custody agrees with sample labels?

Yes No _____

Samples in proper container/bottle?

Yes No _____

Sample containers intact?

Yes No _____

Sufficient sample volume for indicated test?

Yes No _____

All samples received within holding time?

Yes No _____

Container/Temp Blank temperature in compliance ($4^{\circ}\text{C} \pm 2$)?

Temp: 22.0^{\circ}\text{C} Yes No _____

Water - VOA vials have zero headspace?

No VOA vials submitted Yes _____ No _____

(if bubble is present, refer to approximate bubble size and itemize in comments as S (small ~○), M (medium ~○) or L (large ~○))

Water - pH acceptable upon receipt? Yes No

pH adjusted- Preservative used: HNO₃ HCl H₂SO₄ NaOH ZnOAc

For any item check-listed "No", provided detail of discrepancy in comment section below:

Comments: Rec'd within 4 hrs of Sampling

Project Management [Routing for instruction of indicated discrepancy(ies)]

BASELINE

May 29, 2003

Attached is our report for your samples received on 05/21/2003 15:30

This report has been reviewed and approved for release. Reproduction of this report
is permitted only in its entirety.

Please note that any unused portion of the samples will be discarded after
07/05/2003 unless you have requested otherwise.

We appreciate the opportunity to be of service to you. If you have any questions,
please call me at (925) 484-1919.

You can also contact me via email. My email address is: vvancil@stl-inc.com

Sincerely,

Vincent Vancil
Project Manager

Quality Control Checklist
for Review of Laboratory Report

Job No.: Y3515-00
 Laboratory: STL
 Report Date: 5/29/03

Site: Hansen Aggregates - Please, roa
 Laboratory Report No: 2003-05-0586
 BASELINE Review By: BH

		Yes	No	NA
GENERAL QUESTIONS				
(Describe "no" responses below in "comments" section. Contact the laboratory, as required, for further explanation or action on "no" responses; document discussion in comments section.)				
1a.	Does the report include a case narrative? (A case narrative <i>MUST</i> be prepared by the lab for all analytical work requested by BASELINE)	X		
1b.	Is the number of pages for the lab report as indicated on the case narrative/lab transmittal consistent with the number of pages that are included in report?	X		
1c.	Does the case narrative indicate which samples were analyzed by a subcontractor and the subcontractor's name?			X
1d.	Does the case narrative summarize subsequent requests not shown on the chain-of-custody (e.g., additional analyses requested, release of "hold" samples)?			X
1e.	Does the case narrative explain why requested analyses could not be performed by laboratory (e.g., insufficient sample)?			X
1f.	Does the case narrative explain all problems with the QA/QC data as identified in the checklist (as applicable) ?			X
2a.	Is the laboratory report format consistent and legible throughout the report?	X		
2b.	Are the sample and reported dates shown in the laboratory report correct?	X		
3a.	Does the lab report include the original chain-of-custody form?	X		
3b.	Were all samples appropriately analyzed as requested on the chain-of-custody form?	X		
4.	Was the lab report signed and dated as being reviewed by the laboratory director, QA manager, or other appropriate personnel? (Some lab reports have signature spaces for each page). (This requirement also applies to any analyses subcontracted out by the laboratory)		X	
5a.	Are preparation methods, cleanup methods (if applicable), and laboratory methods indicated for all analyses?	X		
5b.	If additional analytes were requested as part of the reporting of the data for an analytical method, were these included in the lab report?			X
6.	Are the units in the lab report provided for each analysis consistent throughout the report?	X		
7.	Are the detection limits (DL) appropriate based on the intended use of the data? (e.g., DL below applicable MCLs for water quality issues?)	X		
8a.	Are detection limits appropriate based on the analysis performed? (i.e., not elevated due to dilution effects)	X		
8b.	If no, is an explanation provided by the laboratory?			X

	Yes	No	NA
9a. Were the samples analyzed within the appropriate holding time? (generally 2 weeks for volatiles, and up to 6 months for total metals)	X		XX
9b. If no, was it flagged in the report?			X
10. If samples were composited prior to analysis, does the lab report indicate which samples were composited for each analysis?			X
11a. Do the chromatograms confirm quantitative laboratory results? (petroleum hydrocarbons)			X
11b. Is a standard chromatogram(s) included in the laboratory report?	X		
11c. Do the chromatograms confirm laboratory notes, if present (e.g., sample exhibits lighter hydrocarbon than standard)			X
12. Are the results consistent with previous analytical results from the site? (If no, contact the lab and request review/reanalysis of data, as appropriate)			X
13a. REVISED LAB REPORTS ONLY. Is the revised lab report or revised pages to a lab report signed and dated as being reviewed by the laboratory director, QA manager, or other appropriate personnel?			X
13b. REVISED LAB REPORTS ONLY. Does the case narrative indicate the date of revision and provide an explanation for the revision?			X
13c. REVISED LAB REPORTS ONLY. Does the revised lab report adequately address the problem(s) which triggered the need for a revision?			X
13d. REVISED LAB REPORTS ONLY. Are the data included in the revised report the same as data reported in the original report, except where the report was revised to correct incorrectly reported data?			X

QA/QC Questions

Field/Laboratory Quality Control - Groundwater Analyses

14. Are field blanks reported as "ND"? (groundwater samples) <i>A field blank is a sample of DI water which is prepared in the field using the same collection and handling procedures as the other samples collected, and used to demonstrate that the sampling procedure has not contaminated the sample.</i>			X
15. Are trip blanks reported as "ND"? (groundwater samples/volatile analyses) <i>A trip blank is a sample of contaminant-free matrix placed in an appropriate container by the lab and transported with the field samples collected. Provides information regarding positive interference introduced during sample transport, storage, preservation, and analysis. The sample is NOT opened in the field.</i>			X
16. Are duplicate sample results consistent with the original sample? (groundwater samples) <i>Field duplicates consist of two independent samples collected at the same sampling location during a single sampling event. Used to evaluate precision of the analytical data and sampling technique. (Differences between the duplicate and sample results may also be attributed to environmental variability).</i>			X

Laboratory Quality Control Checklist

Page 3

		Yes	No	NA
Batch Quality Control				
Samples are batched together by matrix [soil, water] and analyses requested. A batch generally consists of 20 or fewer samples of the same matrix type, and is prepared using the same reagents, standards, procedures, and time frame as the samples. QC samples are run with each batch to assess performance of the entire measurement process.)				
17. Do the sample batch numbers and corresponding laboratory QA/QC batch numbers match?	X			
18a. Are method blanks (MB) for the analytical method(s) below the laboratory reporting limits? <i>Used to assess lab contamination and prevent false positive results. MBs should be "ND."</i>	X			
18b. If no, is an explanation provided in the case narrative to validate the data?			X	
c. Are analytes which may be considered laboratory contaminants reported below the laboratory reporting limit? <i>Common lab contaminants include acetone, methylene chloride, diethylhexyl phthalate, and di-n-octyl phthalate.</i>				X
d. If no, was the laboratory contacted to determine whether reported analyte could be a potential laboratory contaminant and was an explanation included in the case narrative?				X
19. Are laboratory control samples (LCS) and LCS duplicate (LCSD) [a.k.a., Blank Spike (BS) and BS duplicates (BSD)] within laboratory reporting limits? Limits should be provided on the report. <i>LCS is a reagent blank spike with a representative selection of target analyte(s) and prepared in the same manner as the samples analyzed. The LCS should be spiked with the same analytes as the matrix spike (below). The LCS is free from interferences from the sample matrix and demonstrates the ability of the lab instruments to recover the target analytes. Accuracy (recovery information) is generally reported as % spike recovery; precision (reproducibility of results) between the LCS and LCSD is generally reported as the relative percent difference (RPD). LCS/LCSD can be run in addition to or in lieu of, matrix QC data.</i>	X			
20a. Are the Matrix QC data (i.e., MS/MSD) within laboratory limits? Limits should be provided on the lab report. <i>The lab selects a sample from the batch and analyzes a spike and a spike duplicate of that sample. Matrix QC data is used to obtain precision and accuracy information and is reported in the same manner as LCS/LCSD. If the MS/MSD fails, the results may still be considered valid if the MB and either the LCS/LCSD or BS/BSD is within the lab's limits (failure is probably due to matrix interference).</i>				X
20b. If no, is the MB and either LCS/LCSD or BS/BSD within lab limits to validate the data?				X

Laboratory Quality Control Checklist

Page 4

	Yes	No	NA
Sample Quality Control			
21a. Are the surrogate spikes reported within the lab's acceptable recovery limits? A surrogate is a non-target analyte, which is similar in chemical structure to the analyte(s) being analyzed for, and which is not commonly found in environmental samples. A known concentration of the surrogate is spike into the sample or Q.A. "sample" prior to extraction or sample preparation. Results are usually reported as % recovery of the spike. Failure to meet lab's limits for primary and secondary surrogates results in rebatching and reanalysis of the sample; failure of only the primary or the secondary surrogate may be acceptable under certain circumstances. Failure generally is due to coelution with the sample matrix.			X
21b. If no, is an explanation given in the case narrative to validate the data?			X

Comments:

1a: not provided 1b: not provided / not applicable

1c: not provided

11c - not clear if chromatograms indicate higher than standard signature

Time : 0.00 min End Time : 24.00 min
Plot Offset: -52 mV Scale Factor: 1.0

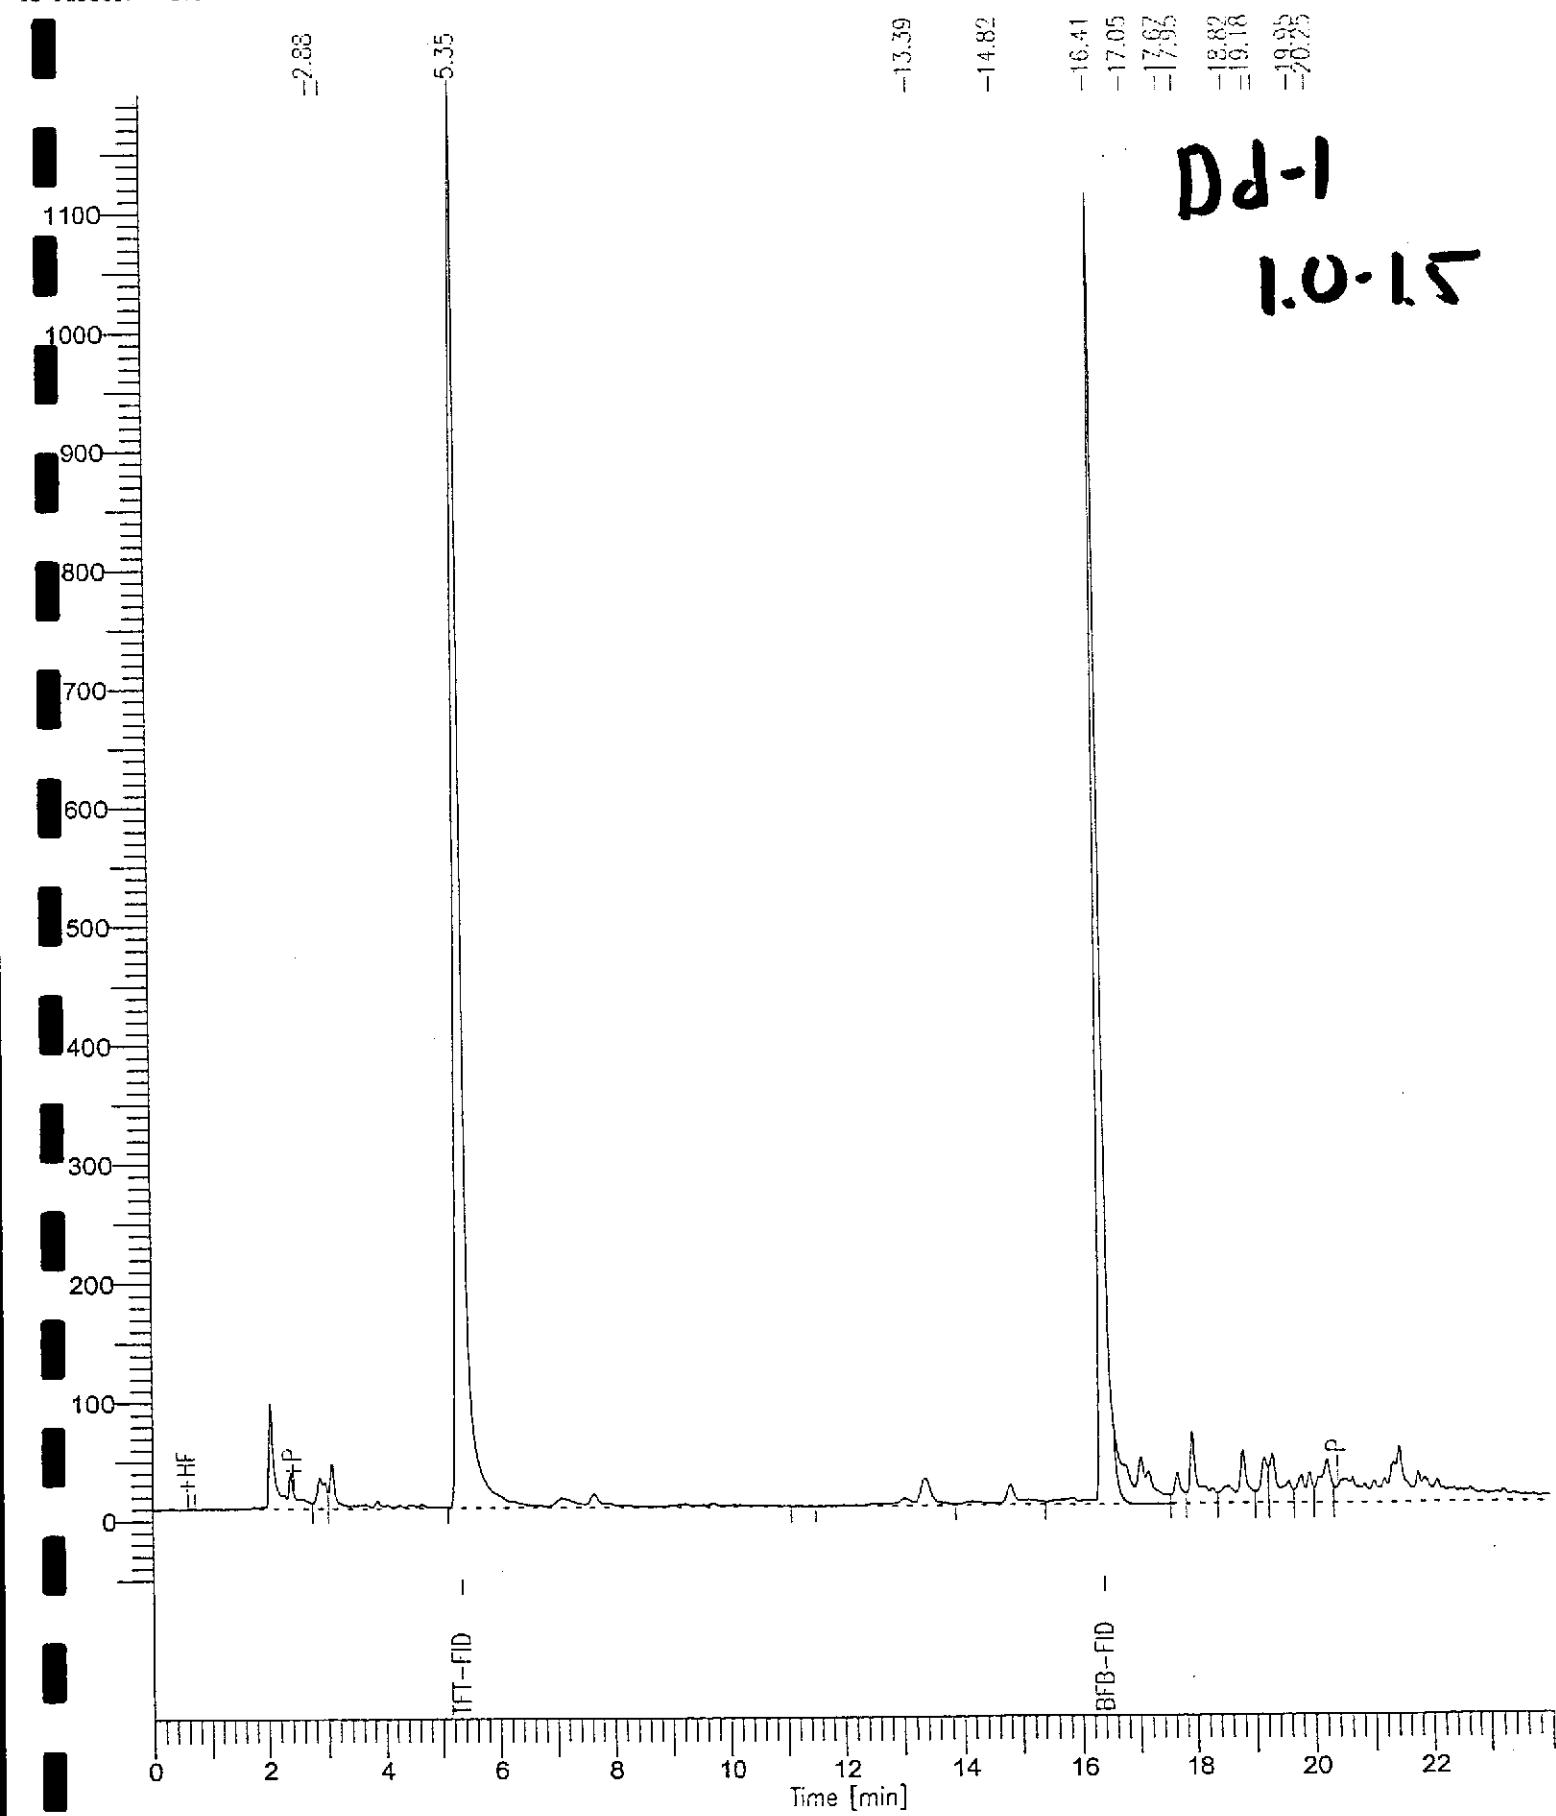

Sample #: Page 1 of 1
Date : 5/23/03 12:17
Time of Injection: 5/23/03 11:41
Low Point : -51.60 mV High Point : 1226.05 mV
Plot Scale: 1277.7 mV

Gasoline Chromatogram

Sample Name : SA-SO-2003-05-0585-002 => Dd-1; 1.0-1.5
File Name : H:\200305\DATA\3G052308.raw
Run ID : 3GSD0402
Time : 0.00 min End Time : 24.00 min
Scale Factor: 1.0 Plot Offset: -50 mV

Sample #: Page 1 of 1
Date : 05/23/2003 12:35
Time of Injection: 05/23/2003 12:11
Low Point : -50.12 mV High Point : 1199.18 mV
Plot Scale: 1249.3 mV

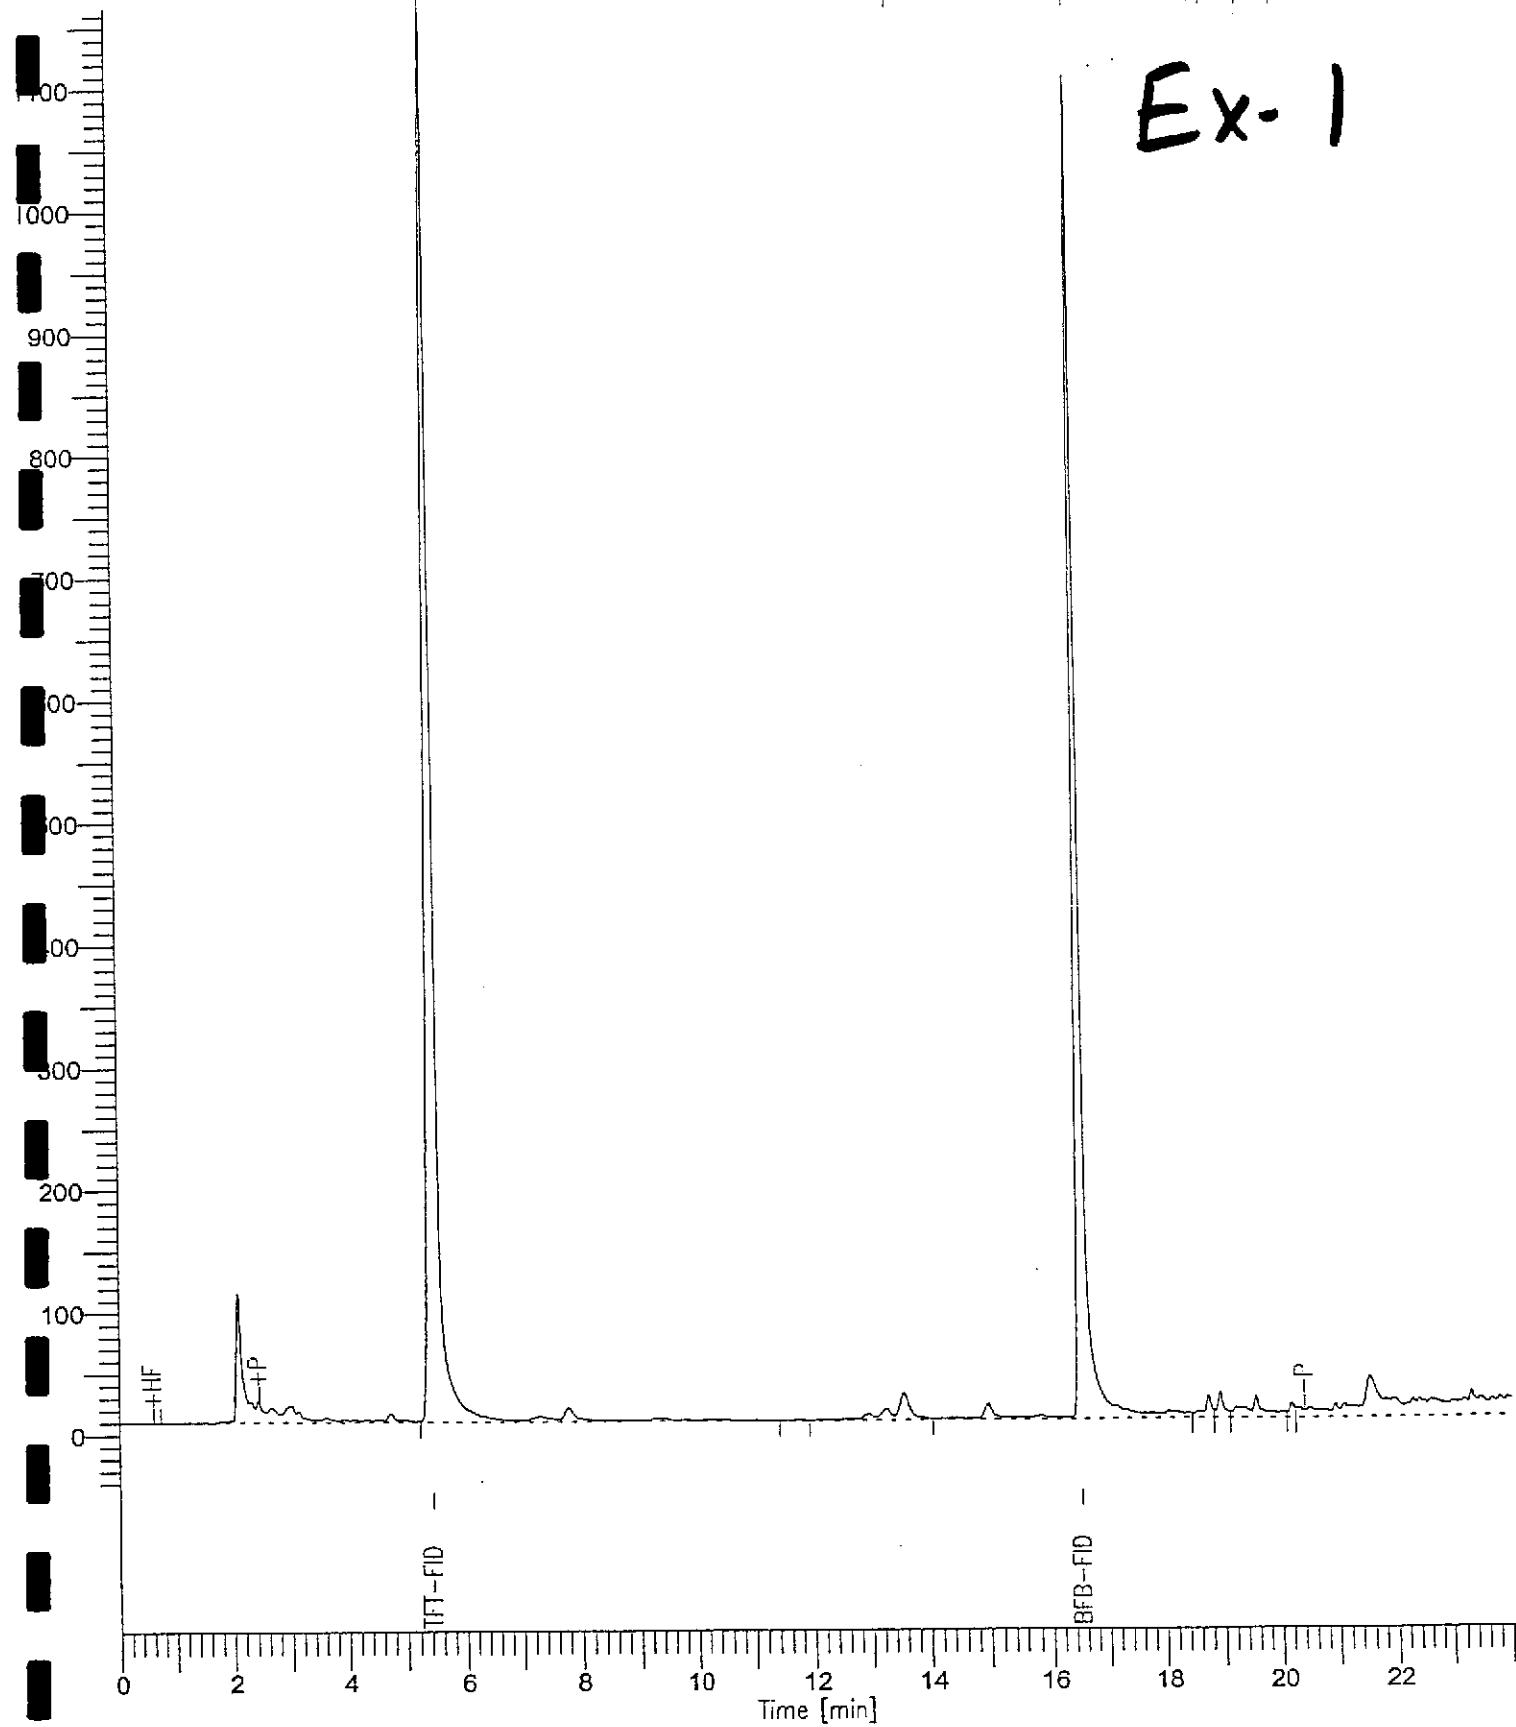

Gasoline Chromatogram

Name : SA-SO-2003-05-0586-003 => EX-1
File : H:\200305\DATA\3G052707.raw
Run : 3GSD0402
Time : 0.00 min End Time : 24.00 min
Factor: 1.0 Plot Offset: -48 mV

Sample #: Page 1 of 1
Date : 05/27/2003 11:32
Time of Injection: 05/27/2003 11:07
Low Point : -48.24 mV High Point : 1165.74 mV
Plot Scale: 1214.0 mV

-13.56
-16.52
-18.74
-19.56
-20.19

Chromatogram

File Name : 050586-Q01sg
Date : 0:\200305\DATA\5527038.raw
Time : 3TPH0424
Start Time : 0.00 min End Time : 30.00 min
Scale Factor: 0.0 Plot Offset: 0 mV

Sample #: 052303.10 Page 1 of 1
Date : 05/23/2003 00:32
Time of Injection: 05/23/2003 00:01
Low Point : 0.00 mV High Point : 1000.00 mV
Plot Scale: 1000.0 mV

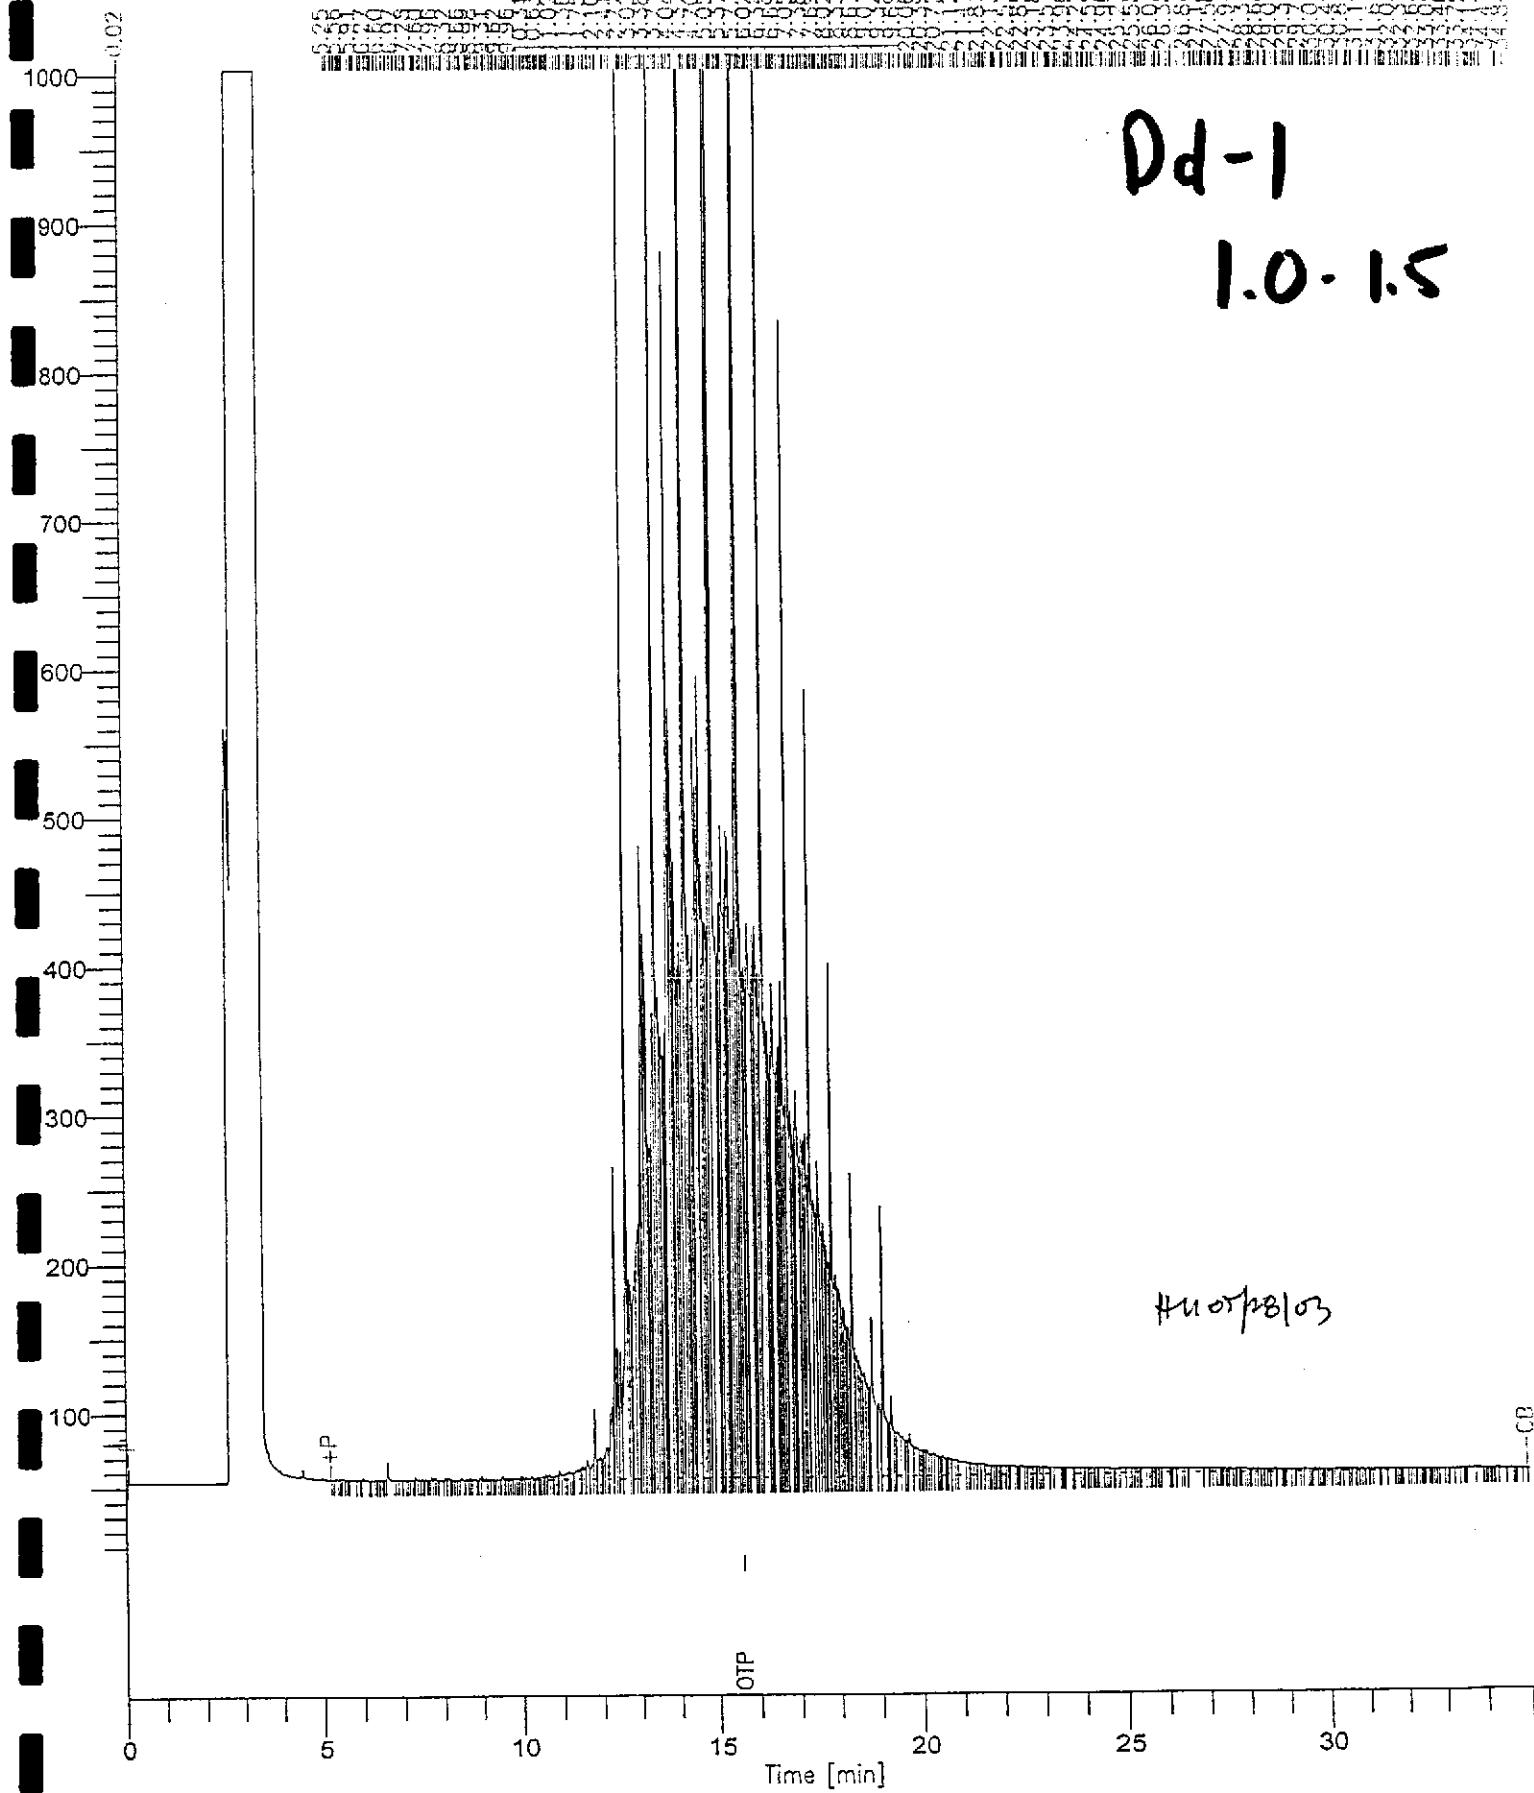

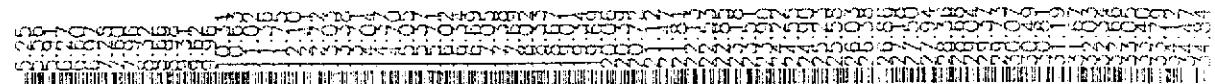

Chromatogram

File Name : C50336-002sg
Date : N:\200305\DATA\2527015.raw
Time : 1T9H0508
Time : 0.00 min
Time Factor: -1.0

Sample #: C52303.10
Date : 05/27/2003 19:01
Time of Injection: 05/27/2003 18:26
Low Point : 2.87 mV High Point : 1002.87 mV
Plot Offset: 3 mV Plot Scale: 1000.0 mV
